 Wallace Beery, *The Champ*  
 Charles Laughton, *The Private Life of Henry VIII*  
 Clark Gable, *It Happened One Night*  
 Victor McLaglen, *The Informer*  
 Paul Muni, *The Story of Louis Pasteur*  
 Spencer Tracy, *Captains Courageous*  
 Spencer Tracy, *Boys Town*  
 Robert Donat, *Goodbye, Mr. Chips*  
 James Stewart, *The Philadelphia Story*  
 Gary Cooper, *Sergeant York*  
 James Cagney, *Yankee Doodle Dandy*  
 Paul Lukas, *Watch on the Rhine*

Bing Crosby, *Going My Way*  
 Ray Milland, *The Lost Weekend*  
 Fredric March, *The Best Years of Our Lives*

Ronald Colman, *A Double Life*  
 Sir Laurence Olivier, *Hamlet*  
 Broderick Crawford, *All the King's Men*  
 Jose Ferrer, *Cyrano de Bergerac*  
 Humphrey Bogart, *The African Queen*

Gary Cooper, *High Noon*

## Actor (supporting role)

Walter Brennan, *Come and Get It*  
 Joseph Schildkraut, *The Life of Emile Zola*  
 Walter Brennan, *Kentucky*  
 Thomas Mitchell, *Stagecoach*

Walter Brennan, *The Westerner*  
 Donald Crisp, *How Green Was My Valley*  
 Van Heflin, *Johnny Eager*  
 Charles Coburn, *The More the Merrier*

Barry Fitzgerald, *Going My Way*

James Dunn, *A Tree Grows in Brooklyn*  
 Harold Russell, *The Best Years of Our Lives*

Edmund Gwenn, *Miracle on 34th Street*

Walter Huston, *The Treasure of Sierra Madre*

Dean Jagger, *Twelve O'Clock High*

George Sanders, *All About Eve*  
 Karl Malden, *A Streetcar Named Desire*

Anthony Quinn, *Viva Zapata!*

## Other Academy Awards for 1952

**Art direction (black-and-white):** Cedric Gibbons, Edward Carfango, *The Bad and the Beautiful*.

**Art direction (color):** Paul Sheriff, *Moulin Rouge*.

**Cinematography (black-and-white):** Robert Surtees, *The Bad and the Beautiful*.

**Cinematography (color):** Winton C. Hoch, Archie Stout, *The Quiet Man*.

**Costume design (black-and-white):** Helen Rose, *The Bad and the Beautiful*.

**Costume design (color):** Marcel Vertes, *Moulin Rouge*.

**Documentary (feature):** *The Sea Around Us*, RKO Radio-Irwin Allen.

**Documentary (short subject):** *Neighbours*, Canadian Natl. Film Bd. of Canada, Mayer-Kingsley, Inc.

**Film editing:** Elmo Williams, Harry Gerstard, *High Noon*.

**Foreign-language film (honorary award):** *Forbidden Games* (French), Times Film Corp.

**Irving G. Thalberg Memorial Award:** Cecil B. DeMille.

**Music (score of drama or comedy):** Dimitri Tiomkin, *High Noon*.

**Music (score of musical picture):** Alfred Newman, *With a Song in My Heart*.

**Music (song):** "High Noon" ("Do Not Forsake Me, Oh My Darlin'") from *High*

*Noon*, Dimitri Tiomkin, Johnny Mercer.  
**Set decoration (black-and-white):** Edwin B. Willis, Keogh Gleason, *The Bad and the Beautiful*.

**Set decoration (color):** Marcel Vertes, *Moulin Rouge*.

**Short subjects (cartoon):** *Johann Mouse*, Fred Quimby-M-G-M.

**Short subjects (1-reel):** *Light in the Window*, Art Films-20th Century-Fox.

**Short subjects (2-reel):** *Water Birds*, Walt Disney-RKO Radio.

**Sound recording:** *Breaking the Sound Barrier*, London Film-UA.

**Technical Awards (class 1):** Eastman Kodak Co.; Ansco Division, General Aniline and Film Corp.

**Technical Awards (class 2):** Technicolor Motion Picture Corp.

**Technical Awards (class 3):** M-G-M projection, research and still depts.; John G. Frayne, R. R. Scoville and Westrex Corp.; Photo Research Corp.; Gustav Jirouch; Carlos Rivas of M-G-M.

**Writing (motion-picture story):** Fredric M. Frank, Theodore St. John, Frank Cavett, *The Greatest Show on Earth*.

**Writing (screenplay):** Charles Schnee, *The Bad and the Beautiful*.

**Writing (story and screenplay):** T. E. B. Clarke, *The Lavendar Hill Mob*.

## New York Film Critics' Awards

(1—best motion picture; 2—best male performance; 3—best feminine performance; 4—best direction; 5—best foreign film; 6—special award.)

- 1940** 1. *The Grapes of Wrath*, 20th Cent.-Fox  
2. Charles Chaplin, \* *The Great Dictator*  
3. Katharine Hepburn, *The Philadelphia Story*  
4. John Ford, *The Grapes of Wrath*  
5. *The Baker's Wife* (French)

- 1941** 1. *Citizen Kane*, RKO-Mercury  
2. Gary Cooper, *Sergeant York*  
3. Joan Fontaine, *Suspicion*  
4. John Ford, *How Green Was My Valley*

- 1942** 1. *In Which We Serve*, UA-Noel Coward  
2. James Cagney, *Yankee Doodle Dandy*  
3. Agnes Moorehead, *The Magnificent Ambersons*  
4. John Farrow, *Wake Island*

- 1943** 1. *Watch on the Rhine*, Warner Bros.  
2. Paul Lukas, *Watch on the Rhine*  
3. Ida Lupino, *The Hard Way*  
4. George Stevens, *The More the Merrier*

- 1944** 1. *Going My Way*, Paramount  
2. Barry Fitzgerald, *Going My Way*  
3. Tallulah Bankhead, *Lifeboat*  
4. Leo McCarey, *Going My Way*

- 1945** 1. *The Lost Weekend*, Paramount  
2. Ray Milland, *The Lost Weekend*  
3. Ingrid Bergman, *Spellbound* and *The Bells of St. Mary's*  
4. Billy Wilder, *The Lost Weekend*  
5. (None)  
6. *The True Glory* and *The Fighting Lady*

- 1946** 1. *The Best Years of Our Lives*, Goldwyn-RKO Radio  
2. Laurence Olivier, *Henry V*  
3. Celia Johnson, *Brief Encounter*  
4. William Wyler, *The Best Years of Our Lives*  
5. *Open City* (Italian)

- 1947** 1. *Gentleman's Agreement*, 20th Century-Fox  
2. William Powell, *Life With Father*  
3. Deborah Kerr, *The Adventuress* and *Black Narcissus*  
4. Elia Kazan, *Gentleman's Agreement* and *Boomerang*  
5. *To Live in Peace* (Italian)

- 1948** 1. *Treasure of Sierra Madre*, Warner Bros.  
2. Sir Laurence Olivier, *Hamlet*  
3. Olivia de Havilland, *The Snake Pit*

- |      |  |      |  |
|------|--|------|--|
|      | 4. John Huston, <i>Treasure of Sierra Madre</i>  | 1951 | 5. <i>Ways of Love</i> (Franco-Italian)                |
|      | 5. <i>Paisan</i> (Italian)                       |      | 1. <i>A Streetcar Named Desire</i> , Warner Bros.      |

### New York Drama Critics' Circle Awards

- |         |  |         |  |
|---------|--|---------|--|
| 1935-36 | <i>Winterset</i> , by Maxwell Anderson   | 1948-49 | <i>Death of a Salesman</i> , by Arthur Miller  |
| 1936-37 | <i>High Tor</i> , by Maxwell Anderson  |         | <i>The Madwoman of Chailiot</i> , by Jean Giraudoux-Maurice Valency <sup>1</sup>   |
| 1937-38 | <i>Of Mice and Men</i> , by John Steinbeck                                     |         | <i>South Pacific</i> , by Rodgers, Hammerstein, and Joshua Logan <sup>2</sup>  |
|         | <i>Shadow and Substance</i> , by Paul Vincent Carroll <sup>1</sup>             | 1949-50 | <i>The Member of the Wedding</i> , by Carson McCullers   |
| 1938-39 | (No award)   |         | <i>The Cocktail Party</i> , by T. S. Eliot <sup>1</sup>  |
|         | <i>The White Steed</i> , by Paul Vincent Carroll <sup>1</sup>                  |         | <i>The Consul</i> , by Gian-Carlo Menotti <sup>2</sup>   |
| 1939-40 | <i>The Time of Your Life</i> , by William Saroyan                              | 1950-51 | <i>Darkness at Noon</i> , by Sidney Kingsley <sup>3</sup>  |
| 1940-41 | <i>Watch on the Rhine</i> , by Lillian Hellman                                 |         | <i>The Lady's Not for Burning</i> , by Christopher Fry <sup>1</sup>  |
|         | <i>The Corn Is Green</i> , by Emlyn Williams <sup>1</sup>                      |         | <i>Guys and Dolls</i> , by Abe Burrows, Jo Swerling, and Frank Loesser <sup>2</sup>                                      |
| 1941-42 | (No award)   | 1951-52 | <i>I Am a Camera</i> , by John Van Druten <sup>4</sup>   |
|         | <i>Blithe Spirit</i> , by Noel Coward <sup>1</sup>                             |         | <i>Venus Observed</i> , by Christopher Fry <sup>1</sup>  |
| 1942-43 | <i>The Patriots</i> , by Sidney Kingsley                                       |         | <i>Pal Joey</i> , by Richard Rodgers, Lorenz Hart and John O'Hara <sup>2</sup>   |
| 1943-44 | (No award)   |         | <i>Don Juan in Hell</i> , by George Bernard Shaw <sup>5</sup>  |
|         | <i>Jacobowsky and the Colonel</i> , by Franz Werfel-S. N. Behrman <sup>1</sup> | 1952-53 | <i>Picnic</i> , by William Inge  |
| 1944-45 | <i>The Glass Menagerie</i> , by Tennessee Williams                             |         | <i>The Love of Four Colonels</i> , by Peter Ustinov <sup>1</sup>   |
| 1945-46 | (No award)   |         | <i>Wonderful Town</i> , by Joseph Fields, Jerome Chodorov, Betty Comden, Adolph Green and Leonard Bernstein <sup>2</sup> |
|         | <i>Carousel</i> , by Rodgers and Hammerstein <sup>2</sup>                      |         |  |
| 1946-47 | <i>All My Sons</i> , by Arthur Miller  |         |  |
|         | <i>No Exit</i> , by Jean-Paul Sartre <sup>1</sup>                              |         |  |
|         | <i>Brigadoon</i> , by Lerner and Loewe <sup>2</sup>                            |         |  |
| 1947-48 | <i>A Streetcar Named Desire</i> , by Tennessee Williams                        |         |  |
|         | <i>The Winslow Boy</i> , by Terence Rattigan <sup>1</sup>                      |         |  |

<sup>1</sup> Citation for best foreign play. <sup>2</sup> Citation for best musical. <sup>3</sup> Based on a novel by Arthur Koestler. <sup>4</sup> Based on Christopher Isherwood's *Berlin Stories*. <sup>5</sup> For "distinguished and original contribution to the theater."

### Awards by Music Critics' Circle of New York

- |         |  |         |  |
|---------|--|---------|--|
| 1941-42 | <i>Symphony No. 3</i> , by William Schuman                 | 1946-47 | <i>Symphony No. 3</i> , by Aaron Copland                     |
| 1942-43 | <i>Symphony No. 1</i> , by Paul Creston                    |         | <i>Quartet No. 2</i> , by Ernest Bloch <sup>1</sup>          |
| 1943-44 | <i>Jeremiah Symphony</i> , by Leonard Bernstein            | 1947-48 | <i>Symphony No. 3</i> , by Wallingford Riegger               |
| 1944-45 | <i>Symphony No. 2</i> , by Walter Piston                   | 1948-49 | <i>Variation, Chaconne and Finale</i> , by Norman Dello Joio |
| 1945-46 | <i>Concerto for Cello and Orchestra</i> , by Samuel Barber | 1949-50 | <i>Symphony No. 2</i> , by Roger Sessions                    |

## Music Critics' Circle Awards—(cont.)

	<i>String Quartet (1949)</i> , by Leon Kirchner <sup>1</sup>		<i>"Spring" Symphony</i> , by Benjamin Britten <sup>5</sup>
1951 <sup>2</sup>	<i>Short Symphony</i> , by Howard Swanson <sup>3</sup>		<i>Judith</i> , by William Schuman <sup>6</sup>
	<i>Comedy on the Bridge</i> , by Bohuslav Martinu <sup>4</sup>	1952	<i>Piano Concerto</i> , by Alexei Haefiff <sup>3</sup>
			<i>Stabat Mater</i> , by Francis Poulenc <sup>5</sup>
			<i>Septet</i> , by Paul Hindemith <sup>1</sup>

<sup>1</sup> Award for chamber music. <sup>2</sup> Covered the period from Oct. 1950 through 1951. In this voting, works by European composers were open to consideration for the first time. No chamber-music award was made. In addition to the awards shown, a special award was given jointly to NBC and to Gian-Carlo Menotti for the television opera *Amahl and the Night Visitors*. <sup>3</sup> Award for orchestral music. <sup>4</sup> Award for opera. <sup>5</sup> Award for choral music. <sup>6</sup> Award for music for the dance.

## The Hall of Fame

The Hall of Fame for Great Americans, established in 1900 on the campus of New York University, is an open-air colonnade with busts and tablets for 81 of the 83 persons so far honored for national achievements. New names are voted on every five years by a committee of 100 men and women from all the states. To be elected to the Hall of Fame, an individual must have been dead more than 25 years (before 1922, the stipulation was 10 years), must have been a citizen of the U. S., and must receive a majority of the committee vote. Nominations may be made by any citizen. Last election, 1950.

Names	Elected	Names	Elected
John Adams (statesman)	1900	John Paul Jones (naval officer)	1925
John Quincy Adams (statesman)	1905	James Kent (jurist)	1900
Louis Agassiz (naturalist)	1915	Sidney Lanier (poet)	1945
Susan B. Anthony (reformer)	1950	Robert E. Lee (military officer)	1900
John James Audubon (naturalist)	1900	Abraham Lincoln (statesman)	1900
George Bancroft (historian)	1910	Henry W. Longfellow (poet)	1900
Henry Ward Beecher (clergyman)	1900	James Russell Lowell (poet)	1905
Alexander Graham Bell (inventor)	1950	Mary Lyon (educator)	1905
Daniel Boone (explorer)	1915	James Madison (statesman)	1905
Edwin Booth (actor)	1925	Horace Mann (educator)	1900
Phillips Brooks (clergyman)	1910	John Marshall (jurist)	1900
William Cullen Bryant (poet)	1910	Matthew F. Maury (oceanographer)	1930
William Ellery Channing (clergyman)	1900	Maria Mitchell (astronomer)	1905
Rufus Choate (lawyer)	1915	James Monroe (statesman)	1930
Henry Clay (statesman)	1900	Samuel F. B. Morse (inventor)	1900
Samuel L. Clemens (Mark Twain) (author)	1920	William T. G. Morton (dentist)	1920
Grover Cleveland (statesman)	1935	John Lathrop Motley (historian)	1910
James Fenimore Cooper (author)	1910	Simon Newcomb (astronomer)	1935
Peter Cooper (manufacturer)	1900	Thomas Paine (philosopher)	1945
Charlotte S. Cushman (actress)	1915	Alice Freeman Palmer (educator)	1920
James Buchanan Eads (engineer)	1920	Francis Parkman (historian)	1915
Jonathan Edwards (clergyman)	1900	George Peabody (merchant)	1900
Ralph Waldo Emerson (author)	1900	William Penn (colonizer)	1935
David G. Farragut (naval officer)	1900	Edgar Allan Poe (author)	1910
Stephen C. Foster (song composer)	1940	Walter Reed (surgeon)	1945
Benjamin Franklin (statesman)	1900	Theodore Roosevelt† (statesman)	1950
Robert Fulton (inventor)	1900	Augustus Saint-Gaudens (sculptor)	1920
Josiah Willard Gibbs* (physicist)	1950	William T. Sherman (army officer)	1905
William Crawford Gorgas (physician)	1950	Joseph Story (jurist)	1900
Ulysses S. Grant (statesman)	1900	Harriet Beecher Stowe (author)	1910
Asa Gray (botanist)	1900	Gilbert Charles Stuart (painter)	1900
Alexander Hamilton (statesman)	1915	Booker T. Washington (educator)	1945
Nathaniel Hawthorne (author)	1900	George Washington (statesman)	1900
Joseph Henry (physicist)	1915	Daniel Webster (statesman)	1900
Patrick Henry (statesman)	1920	J. A. McNeill Whistler (painter)	1930
Oliver Wendell Holmes (author)	1910	Walt Whitman (poet)	1930
Mark Hopkins (educator)	1915	Eli Whitney (inventor)	1900
Elias Howe (inventor)	1915	John Greenleaf Whittier (poet)	1905
Washington Irving (author)	1900	Emma Willard (educator)	1905
Andrew Jackson (statesman)	1910	Frances Elizabeth Willard (reformer)	1910
Thomas Jefferson (statesman)	1900	Roger Williams (clergyman)	1920
		Woodrow Wilson* (statesman)	1950

\* Not yet represented by a bust and tablet. † Bust and tablet to be installed June 1951.

# AVIATION

## Famous Firsts in Aviation

**T**HOUGH man succeeded in making powered flight only a half century ago, his dreams of flying go back to mythology.

The principle of jet propulsion, for example, was understood and put into design form some 2,000 years ago by Hero, an Alexandrian philosopher. And as far back as A.D. 1232 Genghis Khan's son, Ogdai, used rockets as a "secret weapon" in an attack on the Tartar city of Kalfeng. In 1480, Leonardo da Vinci drew sketches for what we now call helicopters.

Man's first aeronautical successes came in balloons.

**1782—First balloon flight.** Jacques and Joseph Montgolfier of Annonay, Fr., sent up a small smoke-filled balloon about mid-November.

**1783—First hydrogen-filled balloon flight.** Jacques A. C. Charles, Paris physicist, supervised construction by A. J. and M. N. Robert of a 13-ft. diameter balloon which was filled with hydrogen. It got up to about 3,000 ft. and traveled about 16 mi. in a 45-min. flight (Aug. 27).

**1783—First human balloon flights.** A Frenchman, Jean Pilâtre de Rozier, made the first captive balloon ascension (Oct. 15). With the Marquis d'Arlandes, Pilâtre de Rozier made the first free flight, reaching a peak altitude of about 500 ft., and traveling about 5½ mi. in 20 min. (Nov. 21).

**1784—First powered balloon.** Gen. Jean Baptiste Marie Meusnier developed the first propeller-driven and elliptically-shaped balloon—the crew cranking three propellers on a common shaft to give the craft a speed of about 3 mi. per hr.

**1784—First woman to fly.** Mme. Thible, a French opera singer (June 4).

**1793—First balloon flight in America.** Jean Pierre Blanchard, a French pilot, made it from Philadelphia to near Woodbury, Gloucester Co., N. J., in a little over 45 min. (Jan. 9).

**1794—First military use of the balloon.** Jean Marie Coutelle, using a balloon built for the French Army, made two 4 hr. observation ascents. The military value of the ascents seems to have been in damage to the enemy's morale.

**1797—First parachute jump.** André-Jacques Garnerin dropped from about 6,500 ft. over Monceau Park in Paris in a 23-ft. diameter "chûte" made of white canvas with a basket attached (Oct. 22).

**1843—First air transport company.** In London, William S. Henson and John Stringfellow filed articles of incorporation for the Aerial Transit Company (Mar. 24). It failed.

**1852—First dirigible.** Henri Giffard, a French engineer, flew in a controllable (more or less) steam engine-powered balloon, 144 ft. long and 39 ft. in diameter, inflated with 88,000 cu. ft. of coal gas. It reached 6.7 mi. per hr. on a flight from Paris to Trappe (Sept. 24).

**1860—First aerial photographers.** Samuel Archer King and William Black made two photos of Boston, still in existence.

**1872—First gas-engine powered dirigible.** Paul Hæmlein, a German engineer, flew in a semi-rigid frame dirigible, powered by a 4-cylinder internal combustion engine running on coal gas drawn from the supporting bag.

**1873—First transatlantic attempt.** *The New York Daily Graphic* sponsored the attempt with a 400,000 cu. ft. balloon carrying a lifeboat. A rip in the bag during inflation brought collapse of the balloon and the project.

**1897—First successful metal dirigible.** An all-metal dirigible, designed by David Schwarz, a Hungarian, took off from Berlin's Tempelhof Field and, powered by a 16-hp. Daimler engine, got several miles before leaking gas caused it to crash (Nov. 13).

**1900—First Zeppelin flight.** Germany's Count Ferdinand von Zeppelin flew the first of his long series of rigid-frame airships. It attained a speed of 18 mi. per hr. and got 3½ mi. before its steering gear failed (July 2).

**1903—First successful heavier-than-air machine flight.** Aviation was really born on the sand dunes at Kitty Hawk, N. C., when Orville Wright crawled to his prone position between the wings of the biplane he and his brother Wilbur had built, opened the throttle of their home-made 12-hp. engine and took to the air. He covered 120 ft. in 12 sec. Later that day, in one of four flights, Wilbur stayed up 59 sec. and covered 852 ft. (Dec. 17).

**1904—First airplane maneuvers.** Orville Wright made the first turn with an airplane (Sept. 15); 5 days later his brother Wilbur made the first complete circle.

**1905—First airplane flight over half an hour.** Orville Wright kept his craft up 33 min. 17 sec. (Oct. 4).

- 1906**—First European airplane flight. Alberto Santos-Dumont, a Brazilian, flew a heavier-than-air machine at Bagatelle Field, Paris (Sept. 13).
- 1908**—First airplane fatality. Lt. Thomas E. Selfridge, U. S. Army Signal Corps, was in a group of officers evaluating the Wright plane at Fort Myer, Va. He was up about 75 ft. with Orville Wright when the propeller hit a bracing wire and was broken, throwing the plane out of control, killing Selfridge and seriously injuring Wright (Sept. 17).
- 1910**—First licensed woman pilot. Baroness Raymonde de la Roche of France, who learned to fly in 1909, received ticket No. 36 on March 8.
- 1910**—First flight from shipboard. Eugene Ely took a Curtiss plane off from the deck of cruiser *Birmingham* at Hampton Roads, Va., and flew to Norfolk (Nov. 14). The following January he reversed the process, flying from Camp Selfridge to the deck of the battleship *Pennsylvania* in San Francisco Bay (Jan. 18).
- 1911**—First U. S. woman pilot. Harriet Quimby, a magazine writer, who got ticket No. 37.
- 1913**—First multi-engined aircraft. Built and flown by Igor Ivan Sikorsky while still in his native Russia.
- 1914**—First aerial combat. In August, Allied and German pilots and observers started shooting at each other with pistols and rifles—with negligible results.
- 1915**—First air raids on England. German Zeppelins started dropping bombs on four English communities (Jan. 19).
- 1918**—First U. S. air squadron. The U. S. Army Air Corps made its first independent raids over enemy lines, in DH-4 planes (British-designed) powered with 400-hp. American-designed Liberty engines (Apr. 8).
- 1918**—First regular airmail service. Operated for the Post Office Department by the Army, the first regular service was inaugurated with one round trip a day (except Sunday) between Washington, D. C., and New York City (May 15).
- 1919**—First transatlantic flight. The NC-4, one of four Curtiss flying boats commanded by Lt. Comdr. Albert C. Read, reached Lisbon, Port. (May 27) after hops from Trepassy Bay, Nfd. to Horta, Azores (May 16-17), to Ponta Delgada (May 20). The Liberty-powered craft was piloted by Walter Hinton.
- 1919**—First nonstop transatlantic flight. Capt. John Alcock and Lt. Arthur Whitten Brown, British World War I flyers, made the 1,900 mi. from St. John's, Nfd. to Clifden, Ire., in 16 hr. 12 min. in a Vickers-Vimy bomber with two 350-hp. Rolls-Royce engines (June 15-16).
- 1919**—First lighter-than-air transatlantic flight. The British dirigible R-34, commanded by Maj. George H. Scott, left Firth of Forth, Scot. (July 2) and touched down at Mineola, L. I., 108 hr. later. The eastbound trip was made in 75 hr. (completed July 13).
- 1919**—First scheduled passenger service (using airplanes). Aircraft Travel and Transport inaugurated London-Paris service (Aug. 25). Later the company started the first trans-channel mail service on the same route (Nov. 10).
- 1921**—First naval vessel sunk by aircraft. Two battleships being scrapped by treaty were sunk by bombs dropped from Army planes in demonstration put on by Brig. Gen. William S. Mitchell (July 21).
- 1921**—First helium balloon. The C-7, non-rigid Navy dirigible was first to use non-inflammable helium as lifting gas, making a flight from Hampton Roads, Va., to Washington, D. C. (Dec. 1).
- 1922**—First member of Caterpillar Club. Lt. (later Maj. Gen.) Harold Harris bailed out of a crippled plane he was testing at McCook Field, Dayton, Ohio (Oct. 20), and became the first man to join the Caterpillar Club—those whose lives have been saved by parachute.
- 1923**—First nonstop transcontinental flight. Lts. John A. Macready and Oakley Kelly flew a single-engine Fokker T-2 nonstop from New York to San Diego, a distance of just over 2,500 mi. in 26 hr. 50 min. (May 2-3).
- 1923**—First autogyro flights. Juan de la Cierva, brilliant Spanish mathematician, made the first successful flight in a rotary wing aircraft in Madrid (June 9).
- 1924**—First round-the-world flight. Four Douglas Cruiser biplanes of the U. S. Army Air Corps took off from Seattle under command of Maj. Frederick Martin (Apr. 6). 175 days later two of the planes (Lt. Lowell Smith's and Lt. Erik Nelson's) landed in Seattle after a circuitous route—one source saying 26,345 mi., another saying 27,553 mi.
- 1926**—First polar flight. Then-Lt. Cmdr. Richard E. Byrd, acting as navigator, and Floyd Bennett as pilot, flew a trimotor Fokker from Kings Bay, Spitsbergen, over the North Pole and back in 15½-hr. flight (May 8-9).
- 1927**—First solo transatlantic flight. Charles Augustus Lindbergh lifted his Wright-powered Ryan monoplane, *Spirit of St. Louis*, from Roosevelt Field, L. I., to stay aloft 33 hr. 39 min. and cover 3,600 mi. to Le Bourget Field outside Paris (May 20-21).
- 1927**—First transatlantic passenger. Charles A. Levine was piloted by Clarence D. Chamberlin from Roosevelt Field, L. I., to Eisleben, Ger., in a Wright-powered Bellanca (June 4-5).

- 1928—First east-west transatlantic crossing. Baron Guenther von Huenefeld, piloted by German Capt. Hermann Koehl and Irish Capt. James Fitzmaurice, left Dublin for New York City (Apr. 12) in a single-engine all-metal Junkers monoplane. Some 37 hr. later they cracked up on Greenly Island, Labrador. Rescued.
- 1928—First U. S.-Australia flight. Sir Charles Kingsford-Smith and Capt. Charles T. P. Ulm, Australians, and two American navigators, Harry W. Lyon and James Warner, crossed the Pacific from Oakland to Brisbane. They went via Hawaii and the Fiji Islands in a trimotor Fokker (May 31-June 8).
- 1928—First trans-Arctic flight. Sir Hubert Wilkins, Australian explorer, piloted by Carl Ben Eielson, flew from Point Barrow, Alaska, to Spitsbergen (mid-April).
- 1929—First of the endurance records. With Air Corps Maj. Carl Spaatz in command and Capt. Ira Eaker as chief pilot, an Army Fokker, aided by refueling in the air, remained aloft 150 hr. 40 min. at Los Angeles (Jan. 1-7).
- 1929—First blind flight. James H. Doolittle proved the feasibility of instrument flying when he took off and landed entirely on instruments (Sept. 24).
- 1929—First rocket engine flight. Fritz von Opel, German auto maker, stayed aloft in his small rocket-powered craft for 75 sec., covering nearly 2 mi. (Sept. 30).
- 1929—First South Pole flight. Comdr. Richard E. Byrd, with Bernt Balchen as pilot, Harold I. June, radio operator, and Capt. A. C. McKinley, photographer, flew a trimotor Fokker from the Bay of Whales, Little America, over the South Pole and back (Nov. 28-29).
- 1930—First Paris-New York nonstop flight. Dieudonné Coste and Maurice Belionte, French pilots, flew a Hispano-powered Breguet biplane from Le Bourget Field to Valley Stream, L. I., in 37 hr. 18 min. (Sept. 2-3).
- 1931—First flight into the stratosphere. Prof. Auguste Piccard, Swiss physicist, and Charles Knipfer, ascended in a balloon from Augsburg, Ger., and reached a height of 51,793 ft. in a 17-hr. flight that terminated on a glacier near Innsbruck, Austria (May 27).
- 1931—First nonstop transpacific flight. Hugh Herndon and Clyde Pangborn took off from Salsboro Beach, Japan, dropped their landing gear and flew 4,860 mi. to near Wenatchee, Wash., in 41 hr. 13 min. (Oct. 4-5).
- 1932—First woman's transatlantic solo. Amelia Earhart, flying a Pratt & Whitney Wasp-powered Lockheed Vega, flew alone from Harbor Grace, Nfld., to Ireland in approximately 15 hr. (May 20-21).
- 1932—First westbound transatlantic solo. James A. Mollison, British pilot, took a de Havilland Puss Moth from Portmarnock, Ire., to Poughkeepsie, N. Y. (Aug. 18).
- 1932—First woman airline pilot. Ruth Rowland Nichols, first woman to hold three international records at the same time—speed, distance, altitude—was employed by N. Y.-New England Airways.
- 1933—First round-the-world solo. Wiley Post took a Lockheed Vega, Winnie Mae, 15,596 mi. around the world in 7 days 18 hr. 49½ min. (July 15-22).
- 1937—First successful helicopter. Hanna Reitsch, German woman pilot, flew Dr. Heinrich Focke's FW-61 in free, fully-controlled flight at Bremen (July 4).
- 1939—First turbojet flight. Just before their invasion of Poland, the Germans flew a Heinkel He-178 plane powered by a Heinkel S3B turbojet (Aug. 27).
- 1942—First American jet plane flight. Robert Stanley, chief pilot for Bell Aircraft Corp., flew the Bell XP-59 Airacomet at Muroc Army Base, Calif. (Oct. 1).
- 1947—First piloted supersonic flight in an airplane. Capt. Charles E. Yeager, U. S. Air Force, flew the X-1, rocket-powered research plane built by Bell Aircraft Corp., faster than the speed of sound at Muroc Air Force Base, Calif. (Oct. 14).
- 1949—First round-the-world nonstop flight. Capt. James Gallagher and USAF crew of 13 flew a Boeing B-50A Superfortress around the world nonstop from Ft. Worth, Tex., returning to same point; 23,452 mi. in 94 hr. 1 min., with 4 aerial refuelings enroute (Feb. 27-Mar. 2).
- 1950—First nonstop transatlantic jet flight. Col. David C. Schilling (USAF) flew 3,300 mi. from England to Limestone, Maine, in 10 hr. 1 min. (Sept. 22).
- 1950—First jet-plane battle. Four U. N. jets attacked by 8 to 12 Communist jets near Sinuiju, Korea. One enemy jet reported shot down and another damaged; no U. N. losses (Nov. 8).
- 1951—First solo across North Pole. Charles F. Blair, Jr., flew a converted P-51 (May 29).
- 1952—First jetliner service. De Havilland Comet flight inaugurated by BOAC between London and Rome (Apr. 21). Round trip: 4 hr. 46 min. flying time.
- 1952—First launching of fighter plane from bomber. Jet fighter plane was launched from inside B-26 bomber (announced by Air Force Apr. 22).
- 1952—First transatlantic helicopter flight. Capt. Vincent H. McGovern and 1st Lt. Harold W. Moore piloted 2 Sikorsky H-19s from Westover, Mass., to Prestwick, Scot. (3,410 mi.). Trip was made in 5 steps, with flying time of 42 hr. 25 min. (July 15-31).
- 1952—First transatlantic round trip in same day. British Canberra twin-jet bomber flew from Aldergrove, N. Ire., to Gander, Nfld., and back in 7 hr. 59 min. flying time (Aug. 26).

# International Airplane Records

### DISTANCE, AIRLINE

International & U. S.: 1,217.14 mi.  
Elton J. Smith (U. S.) in Bell 47-D1  
helicopter powered by 200-hp. Franklin;  
from Ft. Worth, Tex., to Niagara  
Falls, N. Y., Sept. 17, 1952.

### DISTANCE, CLOSED CIRCUIT

International & U. S.: 621.369 mi.  
Majs. D. H. Jensen & W. C. Dodds (U. S.)  
in Sikorsky R-5A powered by 450-hp.  
Pratt & Whitney; Dayton, Ohio, Nov.  
14, 1946.

### ALTITUDE

International & U. S.: 21,220 ft.  
Capt. H. D. Gaddis (U. S.) in Sikorsky  
S-52-1 powered by 245-hp. Franklin;  
Bridgeport, Conn., May 21, 1949.

### MAXIMUM SPEED

International & U. S.: 129.552 mph.  
Harold E. Thompson (U. S.) in Sikorsky  
S-52-1 powered by 245-hp. Franklin;  
Cleveland, Ohio, Apr. 27, 1949.

### SPEED FOR 100 K.M. (CLOSED COURSE)

International & U. S.: 122.749 mph.  
Harold E. Thompson (U. S.) in Sikorsky  
S-52-1 powered by 245-hp. Franklin;  
Milford, Conn., May 6, 1949.

### SPEED FOR 1,000 KILOMETERS IN A CLOSED CIRCUIT (621 MILES)

International & U. S.: 66.642 mph.  
Majs. D. H. Jensen & W. C. Dodds (U. S.)  
in Sikorsky R-5A powered by 450-hp.  
Pratt & Whitney; Dayton, Ohio, Nov.  
14, 1946.

# ASTRONOMY AND CALENDAR

*Edited by*

HUGH S. RICE, A.M., Ph.D., Research Associate, Hayden Planetarium

## Kinds of Time

Of the three main kinds of time (sidereal, apparent solar, and mean solar), the two kinds used in our calendar pages (local civil and standard time) are both types of mean solar time.

*Sidereal time* is used mostly in astronomy. It is nearly but not exactly star-time, and is measured by the diurnal rotation of the vernal equinox point in the sky. Sidereal days are shorter than solar days by about  $3^m 56^s$  of mean time.

*Apparent solar time* is measured by the apparent diurnal rotation of the sun, and is the hour-angle of the sun  $+12^h$ . When the sun is at lower transit we have  $0^h$  by apparent time; when it is on the upper meridian the apparent time is  $12^h$ . The sun is not a good timekeeper, its eastward motion along the ecliptic being irregular, so apparent days are of unequal duration.

*Mean solar time* is the hour-angle of the "mean sun"  $+12^h$ . The mean sun is an imaginary body moving uniformly along the celestial equator. When the mean sun is on the lower meridian, the mean time is  $0^h$ . The actual sun is sometimes ahead of and sometimes behind the mean sun, and the difference at any moment is the *equation of time*. When the sun is west of the mean sun, we have the "sun fast" situation, and the sun crosses the meridian before the mean sun; when the sun is east of the mean sun, we have the "sun slow" condition, and the sun transits after the mean sun. The equation of time helps in conversion of apparent and mean solar time. No clock runs on apparent time but ordinary clocks keep mean solar time in some form.

*Local civil time* (L.C.T.) is the mean solar time of a designated meridian, and its day begins with the mean sun at lower transit. This is midnight, the moment of zero hour ( $0^h$ ). Ordinary clocks are not set to local civil time, because this time—

at any instant—varies with any change of longitude.

*Standard time* is the local civil time of a standard meridian, but used over an entire time-zone. In the U. S. the four zones (Eastern, Central, Mountain, and Pacific) are based upon the standard meridians of  $75^\circ$ ,  $90^\circ$ ,  $105^\circ$ , and  $120^\circ$  respectively. Ordinary clocks run on standard time, a type of mean solar time. In the summer, in certain localities, they run on advanced time (as daylight saving time) but this is only a clock-setting, and is actually standard time. Daylight saving time for a certain zone is the normal standard time of one zone to the east. While popular in certain metropolitan areas, it is not used for scientific observations. Advanced time is  $1^h$  later on the clock-face than the normal standard time of the same zone.

*Time zones.* A time-zone chart of the entire world shows clearly how the world is divided into 24 time zones according to longitude. In a large proportion of countries, standard time is in use, and commonly the time on the clock-face reads 1 hour later for each zone east of a given zone, and 1 hour earlier for each zone west of a given zone. The zero time-zone of the world runs thru Greenwich, Eng., and the zones are so marked that the standard time at a particular station, added algebraically to the zone-number at the bottom gives the corresponding universal time or Greenwich civil time. For example, 3 A.M., M.S.T.  $+ 7^h = 10^h$  U.T. or G.C.T.

Mexico, except for the northern part of Lower California, uses 90th-meridian time entirely. Canada uses the 4 standard-time zones of the U. S., and two others: (1) 60th-meridian or Atlantic standard time, for New Brunswick, Nova Scotia, and Quebec (east of  $68^\circ$  W.),  $4^h$  earlier than Greenwich, and (2) 135th-meridian or Yukon standard time,  $9^h$  earlier than Greenwich.

Newfoundland and the Labrador coast use Newfoundland standard time, 3<sup>h</sup> 30<sup>m</sup> earlier than Greenwich. Alaska uses 4 time-zones, those based on the following meridians of west longitude: 120° (Juneau), 135° or Yukon standard time (Yakutat), 150° or Alaska standard time (Fairbanks), and 165° (Nome).

**The Date-line.** At any moment of time, usually there are parts of two different but contiguous days going on at different places on the earth. The change of date is made at the date-line, an imaginary line that follows essentially the course of the 180° meridian in the Pacific Ocean. At points east of the date-line the calendar day is 1 day earlier than at places to the west of

the line. At a point just west of the date-line, let us suppose it is 18<sup>h</sup> or 6 P.M., L.C.T., on Aug. 1. At the same moment it is 12<sup>h</sup> at long. 90° e., 6<sup>h</sup> at long. 0°, and 0<sup>h</sup> at long. 90° w., all of the same date, Aug. 1. West of long. 90° w., it is not yet 0<sup>h</sup> (midnight); hence between 90° w. and 180° the date must be July 31. As one crosses the date-line going eastward his watch remains the same but the date changes abruptly to 1 day earlier, so the traveler repeats part of a calendar day. As one crosses the line going westward the date changes abruptly to one day later, causing him to omit a calendar day. (According to actual practice, the change is made at night regardless of the true moment of crossing.)

## On Using the Following Calendar Pages

**Sun fast and sun slow.** This is the equation of time, as previously discussed.

**Sunrise and sunset.** For accurate results, two corrections to the tabular values are necessary: (1) interpolation for latitude, and (2) reduction to standard time. When the observer is at a latitude between two given latitudes, he computes a time for sunrise or sunset that lies between the times shown for the given latitudes. (Our table of longitudes and latitudes is a guide for one's position, but a large atlas may be consulted.) For example, on July 26 the sun sets at 6:58 P.M. at lat. 30° and at 7:08 at lat. 35°, the difference being +10<sup>m</sup>. An observer at Baton Rouge, La., lat. 30°28', would be about 0.1 the distance between 30° and 35°.  $(0.1)(+10^m) = +1^m.0$ , and therefore at Baton Rouge sunset occurs at 6:58 + 1<sup>m</sup> or 6:59 P.M., L.C.T. The station (long. 91°10' w.) is 1°10' or 1°.17 west of the 90° standard meridian;  $1.17 \times (+4^m) = +4^m.7$  or 5<sup>m</sup>; 6:59 + 5<sup>m</sup> = 7:04 P.M., C.S.T., sunset time.

In the sun and moon tables, the data has to be given in LOCAL CIVIL TIME. This is not standard time, but has to be reduced to standard time.

To reduce local civil time to standard time, decrease the L.C.T. by 4<sup>m</sup> for every degree the station is east of the standard meridian, or increase the L.C.T. by 4<sup>m</sup> for every degree the station is west of the standard meridian.

**Moonrise and moonset.** For accurate results at any station in the U. S., three corrections are needed: (1) interpolation for latitude, (2) correction for longitudes west of 82½°, and (3) reduction to standard time.

(1) Interpolation for latitude follows the same method as for the sun.

(2) Use of the *a*-factor. The moon tables are exact for the given latitudes and for longitude 75° w. The *a*-factor adapts them to any longitude in the U. S. For observers in the eastern states and as far west as long. 82½° [Port Huron, Mich., Mans-

field, Ohio, Huntington, W. Va., Asheville, N. C., Tampa, Fla.], no *a*-factor is used. For stations in the 90° zone, between 82½° and 97½°, use the *a*-factor in the column "90". The "*a*-factor, moonrise" is always to be added to the time of moonrise as derived from the main tables, and the "*a*-factor, moonset" is added to the time of moonset as derived. The boundary at 97½°, between the 90° and the 105° zones, runs through Grafton, N. Dak., Webster, S. Dak., Norfolk, Nebr., Salina, Kans., Oklahoma City, Okla., Fort Worth and Corpus Christi, Tex. Observers in the 105° zone, between 97½° and 112½° long., will use the "105°" *a*-factor, and those west of 112½° will use the "120°" *a*-factor, the eastern boundary (112½°) of the 120° zone going through Butte, Mont., Pocatello, Idaho, Panguitch, Utah, and Prescott, Ariz. These zones do not correspond to the irregular divisions of the standard-time belts.

(3) Change L.C.T. to standard time.

**Example:** find moonset on Jan. 5, 1954, at Ocala, Fla., long. 82°7' w., lat. 29°11' n. (a) Moonset for 35° is 5:43 P.M.; for 30°, 6:00 P.M.; the difference is +12<sup>m</sup>.  $30^\circ - 29^\circ.2 = 0^\circ.8$  or .16 of a 5° interval south of lat. 30°.  $.16(+12^m) = +1^m.9$  or +2<sup>m</sup>. 6:00 P.M. + 2<sup>m</sup> = 6:02 P.M. (b) An *a*-factor for moonset of 1<sup>m</sup> is indicated, giving 6:03 P.M., L.C.T. (If 90° adds 3<sup>m</sup>, 82° would add about 1<sup>m</sup>.) (c) Reduce to standard time.  $82^\circ.7' - 75^\circ = 7^\circ.7'$ ; hence Ocala is 7°.1 w. of the 75° meridian.  $7.1(+4^m) = +28^m.4$  or 28<sup>m</sup>; 6:03 + 28<sup>m</sup> = 6:31 P.M., E.S.T., moonset at Ocala, Fla.

**Moon's transit.** This data indicates the local civil time of the moon crossing the observer's meridian. The time is the same for all latitudes. It is nearly correct for all longitudes in the U. S.; for more exact work use—for every day—a mean *a*-factor of 2<sup>m</sup>, 4<sup>m</sup>, 6<sup>m</sup>. That is, for the 75° zone, use no correction; for the 90° zone add 2<sup>m</sup> to the time in the tables; for the 105° zone add 4<sup>m</sup>; for the 120° zone add 6<sup>m</sup>. Afterward, reduce the L.C.T. to standard time.

## Symbols

☉ the sun	♃ Jupiter	☾ occultation
☾ the moon	♄ Saturn	♌ opposition
☿ Mercury	♅ Uranus	● new moon
♀ Venus	♆ Neptune	☾ first quarter
♁ the earth	♇ Pluto	◯ full moon
♂ Mars	♂ conjunction	☾ last quarter

## Signs of the Zodiac

## and average date of sun entering

- ♈ Aries, the Ram, Mar. 21
- ♉ Taurus, the Bull, Apr. 20
- ♊ Gemini, the Twins, May 21
- ♋ Cancer, the Crab, June 21
- ♌ Leo, the Lion, July 23
- ♍ Virgo, the Virgin, Aug. 23
- ♎ Libra, the Balance, Sept. 23
- ♏ Scorpius, the Scorpion, Oct. 23
- ♐ Sagittarius, the Archer, Nov. 22
- ♑ Capricornus, the Goat, Dec. 22
- ♒ Aquarius, the Water-bearer, Jan. 20
- ♓ Pisces, the Fishes, Feb. 19

## Phenomena, 1954 (Eastern Standard Time)

## January

d	h	m	
2	3	— a.m.	The earth at perihelion
2	4	— p.m.	♂ ♀ ♄, ♂ 1°17' s.
3	1	33 a.m.	♄, max. declination, —26°0'44"
7	—	—	♄ on meridian, 10 p.m., L.C.T.
15	8	30 p.m.	♂ ♄ ♄, ♂ 3°34' s.
23	0	13 a.m.	♄ on celestial equator
27	8	7 a.m.	♂ ♄ ♄, ♀ 7°53' n.
29	11	30 p.m.	♄'s brightest moons all on e. side

## February

5	—	—	♄ on meridian, 8 p.m., L.C.T.
12	0	24 a.m.	♂ ♄ ♄, ♂ 3°30' s.
13	—	—	♄ on meridian, 5 a.m., L.C.T.
13	3	— p.m.	♄, greatest elongation e., 18°9' from ☉
23	4	33 p.m.	♂ ♄ ♄, ♀ 7°51' n.
24	6	30 p.m.	♂ ♄ Antares, ♂ 5° s.
25	10	45 p.m.	♄'s brightest moons all on w. side
28	4	— a.m.	Titan, w. elongation from ♄

## March

8	4	— a.m.	Titan, e. elongation from ♄
13	—	—	♄, max. libration in long., w. limb exposed
13	4	45 p.m.	♂ ♄ ♄, ♂ 0°13' n.
15	—	—	♄ on meridian, 3 a.m., L.C.T.
17	10	15 p.m.	♄'s brightest moons all on w. side
22	9	28 p.m.	♂ ♄ ♄, ♀ 7°47' n.
25	1	29 a.m.	♂ ♄ Scorpii, mag. 3.1; reappearance
28	10	— a.m.	♄, greatest elongation w., 27°49' from ☉

## April

7	9	34 p.m.	♂ ♄ ♄, ♂ 2°33' s.
8	11	— p.m.	Titan, e. elongation from ♄
9	8	55 p.m.	to 9:51, ♂ ♄ Geminorum, mag. 3.5
9	10	53 p.m.	♂ ♄ ♄, ♂ 0°28' n.
13	—	—	♄ on meridian, 1 a.m., L.C.T.
13	9	45 p.m.	♄'s brightest moons all on e. side
23	12	20 p.m.	♂ ♄ ♄, ♂ 0°36' north
26	—	—	♄, max. libration in long., e. limb exposed

## May

5	3	10 p.m.	♂ ♄ ♄, ♂ 1°54' s.
6	11	26 p.m.	♂ ♄ Aldebaran, ♀ 6° n.
9	11	25 p.m.	♂ ♄ Leonis, mag. 3.8; disappearance
10	—	—	♄ on meridian, 11 p.m., L.C.T.
16	1	29 a.m.	♂ ♄ Betelgeuse, ♂ 16° n.
17	—	—	♄ on meridian, 3 a.m., L.C.T.
21	3	22 a.m.	♂ ♄ ♄, ♂ 1°24' s.
23	7	— a.m.	♂ ♄ ♄, ♀ 1°30' n.

## June

3	7	47 p.m.	♂ ♄ ♄, ♂ 1°2' n.
5	—	—	♄, max. libration in long., w. limb exposed
8	—	—	♄ on meridian, 9 p.m., L.C.T.
9	2	— a.m.	♄, greatest elongation e., 24°1' from ☉
9	11	— p.m.	♂ ♄ ♄, ♀ 1°23' n.
13	—	—	♄ on meridian, 1 a.m., L.C.T.
17	2	31 a.m.	♂ ♄ ♄, ♂ 2°56' s.
24	12	— noon	♂ ♄ ☉

## July

d	h	m	
3	3	— p.m.	The earth at aphelion
5	—	—	♄ on meridian, 11 p.m., L.C.T.
12	2	39 a.m.	♂ ♄ Regulus, ♀ 1° n.
13	7	18 p.m.	♂ ♄ ♄, ♂ 3°20' s.
19	0	1 a.m.	♄, max. declination, —28°22'16"
19	10	18 p.m.	♄ on celestial equator
26	10	— p.m.	♄, greatest elongation w., 19°49' from ☉
27	7	— p.m.	♂ ♄ ♄, ♀ 1°55' s.

## August

1	—	—	♄ on meridian, 9 p.m., L.C.T.
2	1	18 p.m.	♂ ♄ ♄, ♀ 5°52' n.
4	7	— a.m.	♂ ♄ ♄, ♂ 0°35' s.
5	10	8 p.m.	♂ ♄ ♄, ♀ 7°40' n.
8	7	32 p.m.	♄ on celestial equator
10	2	32 a.m.	♂ ♄ ♄, ♂ 3°6' s.
24	8	8 p.m.	♂ ♄ ♄, ♂ 0°39' n.
30	7	42 p.m.	♂ ♄ Spica, ♀ 0°8' n.

## September

5	9	12 p.m.	♄, max. declination, —25°2'48"
6	1	— a.m.	♄, greatest elongation e., 46°14' from ☉
10	4	15 a.m.	♄'s brightest moons all on e. side
15	10	— p.m.	♂ ♄ ♄, ♀ 6°8' s.
21	10	45 a.m.	♂ ♄ ♄, ♂ 1°20' n.
29	3	12 a.m.	♂ ♄ ♄, ♀ 2°42' n.
29	9	19 p.m.	♂ ♄ ♄, ♀ 6°54' n.
30	5	14 p.m.	♂ ♄ ♄, ♀ 1°13' s.

## October

4	3	45 a.m.	♄'s brightest moons all on w. side
5	6	47 p.m.	♂ ♄ ♄, ♂ 3°59' s.
5	11	— p.m.	♄, greatest elongation e., 25°32' from ☉
7	11	— p.m.	♂ ♄ ♄, ♂ 0°21' s.
9	6	— a.m.	♂ ♄ ♄, ♀ 5°34' s.
11	3	— a.m.	♄ at greatest brilliancy
12	—	—	♄, max. libration in lat., s. limb exposed
18	10	53 p.m.	♂ ♄ ♄, ♂ 1°58' n.

## November

3	2	28 p.m.	♂ ♄ ♄, ♂ 5°3' s.
14	3	15 a.m.	♄'s brightest moons on e. side in order
14	7	— p.m.	♄, greatest elongation w., 19°19' from ☉
15	4	46 a.m.	♂ ♄ ♄, ♂ 2°29' n.
21	—	—	♄, max. libration in lat., n. limb exposed
23	—	—	♄ on meridian, 4 a.m., L.C.T.
26	3	15 a.m.	♄'s brightest moons all on w. side
28	7	— p.m.	♂ ♄ ♄, ♀ 2°32' s.

## December

3	6	25 p.m.	♄ on celestial equator
8	—	—	♄ on meridian, 3 a.m., L.C.T.
10	2	30 a.m.	♄'s brightest moons all on w. side
12	4	44 p.m.	♂ ♄ ♄, ♂ 2°31' n.
15	7	— p.m.	♄ at greatest brilliancy
21	4	— a.m.	♄ at greatest brilliancy
21	10	30 a.m.	♄'s brightest moons all on w. side
24	2	30 a.m.	♄'s brightest moons all on w. side

## Longitude, Latitude, Time and Magnetic Declination of U. S. and Canadian Cities

The last column shows the magnetic declination or angle which the magnetic meridian makes with the true (geographic) meridian. The value being marked w or e, the north end of the compass needle points west or east respectively of true north by that number of degrees.

\* The Leap-Year World Holiday, W on June 31 (an extra day), follows June 30 in leap years only.

† The Year-End World Holiday, W on December 31 (365th day), follows December 30 every year.

## Exposition

The perpetual World Calendar divides the year into equal quarters of 91 days, or thirteen weeks, or three months, or approximately one season. The first month in each quarter contains 31 days. The other two months have 30 days each, every month having twenty-six weekdays plus Sundays. Every quarter with its monthly arrangement of 31-30-30 days begins on a Sunday, the first day of the week, and ends on a Saturday, the seventh day of the week, which is easy for business, accountants and educators because the closing

day of every quarter does not fall on a Sunday. Every year begins logically on the accepted first day of the week, a Sunday, January 1. This plan retains the customary arrangement of weekdays.

The 364-day year is not complete however. The 365th day of the year, essential in keeping the calendar in step with the seasons, is the logical Year-End World Holiday, dated W or December 31, that follows Saturday, December 30, every year. By giving the 365th day, the Year-End World Holiday, a name and date, a blank

date is avoided. This World Holiday is an integral part of the year; it belongs to and completes the calendar.

The extra day in leap years is the Leap-Year World Holiday, dated W or June 31, and follows Saturday, June 30. By placing these two stabilizing days, the Leap-Year World Holiday in leap years at the end of the second quarter and the Year-End World Holiday every year at the end of the fourth

quarter, the calendar in leap years becomes balanced, each half-year having 183 days. The calendar is thus a stable, balanced, well-coordinated time system.

Seventeen nations have already approved the World Calendar, including Afghanistan, Brazil, Chile, China, Czechoslovakia, Estonia, Greece, Hungary, Mexico, Norway, Panamá, Peru, Saudi Arabia, Spain, Syria, Turkey and Uruguay.

## Perpetual Calendar

1800—2000 A.D.

Day of the month	Jan. Oct.	Apr. Jul. Jan.	Sept. Dec.	Jun.	Feb. Mar. Nov.	Aug. Feb.	May	
1 8 15 22 29.....	A	B	C	D	E	F	G	Mon.
2 9 16 23 30.....	G	A	B	C	D	E	F	Tue.
3 10 17 24 31.....	F	G	A	B	C	D	E	Wed.
4 11 18 25.....	E	F	G	A	B	C	D	Thur.
5 12 19 26.....	D	E	F	G	A	B	C	Fri.
6 13 20 27.....	C	D	E	F	G	A	B	Sat.
7 14 21 28.....	B	C	D	E	F	G	A	Sun.
EXAMPLES	.....	.....	1800	1801	1802	1803	.....	
(1) Given Nov. 20, 1891, to find the day of the week. Under Nov., opposite 20, is G. In the 1891 column, opposite G is Fri., <i>ans.</i>	1804	1805	1806	1807	.....	1808	1809	
(2) Given Fri., Oct. —, 1868, to find the possible days of the month. In the 1868 column, opposite Fri. is G. Under Oct., G gives 2, 9, 16, 23, 30, <i>ans.</i> , the Fridays of Oct., 1868.	1810	1811	.....	1812	1813	1814	1815	
(3) Given Mon., — 5, 1811, to find the possible months. In the 1811 column, opposite Mon. is B. Opposite 5, B gives Aug., the only common-year month available, <i>ans.</i>	.....	1816	1817	1818	1819	.....	1820	
(4) Given Sat., Feb. 29, —, to find the possible years. Under Feb., leap-year, opposite 29, is F. Opposite Sat. F gives leap-years 1812, 1840, 1868, 1896, etc., <i>ans.</i>	1821	1822	1823	.....	1824	1825	1826	
	1827	.....	1828	1829	1830	1831	.....	
	1832	1833	1834	1835	.....	1836	1837	
	1838	1839	.....	1840	1841	1842	1843	
	1844	1845	1846	1847	.....	1848	1849	
	1849	1850	1851	.....	1852	1853	1854	
	1855	.....	1856	1857	1858	1859	.....	
	1860	1861	1862	1863	.....	1864	1865	
	1866	1867	.....	1868	1869	1870	1871	
	.....	1872	1873	1874	1875	.....	1876	
	1877	1878	1879	.....	1880	1881	1882	
	1883	.....	1884	1885	1886	1887	.....	
	1888	1889	1890	1891	.....	1892	1893	
	1894	1895	.....	1896	1897	1898	1899

## Morning and Evening Stars and Planets in 1954

### MERCURY

Morning star, Jan. 1 to Jan. 14  
 Evening star, Jan. 14 to Mar. 1  
 Morning star, Mar. 1 to May 8  
 Evening star, May 8 to July 6  
 Morning star, July 6 to Aug. 21  
 Evening star, Aug. 21 to Oct. 29  
 Morning star, Oct. 29 to Dec. 25  
 Evening star, Dec. 25 to Dec. 31

### VENUS

Morning star, Jan. 1 to Jan. 29  
 Evening star, Jan. 29 to Nov. 15  
 Morning star, Nov. 15 to Dec. 31

*Mercury* may be seen over the eastern horizon before sunrise for a week or more before and after each western elongation, and similarly over the western horizon after sunset before and after eastern elongations. Elongation dates appear in the phenomena section. At the Feb. and Mar. elongations Mercury is in Aquarius near the star Lambda; at the June and July elongations it is in Gemini, southwest of Pollux; at the Oct. time it is in e. Virgo, southeast of Spica; at the Nov. time it is east of Spica.

*Venus* is too close to the sun for visibility in Jan., Feb., and most of Mar. In mid-Apr. it is in Aries, southeast of the bright stars; in mid-May in Taurus, northeast of Aldebaran; in mid-June in w. Cancer, southeast of Pollux; in July in Leo, close to Regulus; in Aug. in Virgo, near Gamma; at the Sept. elongation in Virgo, southeast of Spica; in mid-Oct. in s. Libra, w. of Antares; in Nov. too near the sun till the latter part; in Dec. in Libra as a morning star.

*Mars'* positions are: in Jan. in Libra in

### MARS

Morning star, Jan. 1 to June 24  
 Evening star, June 24 to Dec. 31

### JUPITER

Evening star, Jan. 1 to June 30  
 Morning star, June 30 to Dec. 31

### SATURN

Morning star, Jan. 1 to Apr. 26  
 Evening star, Apr. 26 to Nov. 4  
 Morning star, Nov. 4 to Dec. 31

the quadrilateral; Feb. in e. Libra and in Scorpius n. of Antares; Mar. in s. Ophiuchus; Apr. to Sept. in Sagittarius; Oct. in Sagittarius and w. Capricornus; Nov. in Capricornus; Dec. in Aquarius. Mars is retrograde in the last week of May, in June and July.

*Jupiter* is in Taurus, northeast of Aldebaran, Jan. to May; in w. Gemini near the sun in the w. sky in June; from mid-July to Sept. in Gemini in the eastern sky; Oct. to Dec. at the Gemini-Cancer border.

*Saturn*, Jan. to Nov. is at the Libra-Virgo border; Nov. 15 to end of Dec. in Libra.

*Uranus* is in e. Gemini, south of Pollux, as an evening object in field-glasses, from Jan. 11 to July 16. From Aug. to Dec. it is at the Gemini-Cancer border, as a morning planet. *Neptune*, Jan. to Apr. 15 is in Virgo in the morning sky, about 5° northeast of Spica and visible in small telescopes; then an evening planet to Oct. and a morning object in Nov. and Dec. *Pluto* is within the sickle of Leo all the year, and is for large telescopes.

---

## The Sun

There are countless millions of far distant, superheated, self-luminous gaseous bodies called stars and each one is in itself a sun. Our Sun—the star around which our whole solar system revolves—is at a mean distance of 93,003,000 miles from the Earth, has a diameter of 865,390 miles, a surface temperature of about 11,000° F. and an interior temperature estimated at millions of degrees. It has a surface area approximately 12,000 times that of the Earth and in volume or bulk it is about 1,306,000 times the size of the Earth. It is, nevertheless, a star of only average size and temperature.

The Sun rotates on its axis and, by observation of Sun-spots (great whirling storms in the Sun's atmosphere) and Faculae (bright streaks or areas on the Sun's surface), astronomers have discovered that the rotational speed varies from

approximately 24½ days at its equator to approximately 34 days near its poles. The Sun is just one star of the great Milky Way Galaxy that is rotating on its galactic axis at a rate that gives the Sun a galactic traveling speed of 175 miles per second. Furthermore, the Sun is moving toward a point known as "the apex of the Sun's way" in the constellation Hercules at a speed of about 12 miles per second.

What we see when we look at the Sun is the glowing surface called the Photosphere. Extending above this surface is the Sun's atmosphere consisting of two layers, one extending outward for a few hundred miles from the Sun's surface and called the Reversing Layer for spectroscopic reasons, the other an outer layer extending several thousand miles and called the Chromosphere because of its reddish color due mostly to superheated hydrogen, he-

ium and calcium. Solar "prominences" occasionally burst out from this layer and extend hundreds of thousands of miles above the Sun's surface. Beyond these layers of solar atmosphere and extending

to great height is the outermost observable solar feature, the magnificent Corona of exceedingly slight density that provides an awesome spectacle for observers during total eclipses of the Sun.

## Comets

In ancient times comets were supposed to be omens of sudden death, war, revolution or other dire events in human affairs and practically nothing was known of their true nature. They still offer puzzling problems to modern astronomers and, with about 1000 listed, new ones are being discovered and charted each year. In general, comets consist of a nucleus (sometimes lacking) surrounded by a head or "coma" (from the Greek word for hair because of

its hazy appearance) from which extends the great tail that makes the passage of a comet through our skies such a striking spectacle. Comets come in varying sizes but the average diameter of the heads of a large number of observed comets is about 80,000 miles and the tail length may stretch out to more than 100,000,000 miles. The density of comets is so low, however, that we can see the stars through them and there is more actual material in one

cubic inch of ordinary air than in 2000 cubic miles of the tail of a comet.

The luminous tails of comets were believed, for many centuries, to be merely clouds high in our atmosphere. Tycho Brahe, eccentric Danish astronomer, proved that the comet he observed in 1577 was a celestial object far beyond the limit of the Earth's atmosphere. But the great forward step in the study of comets came when Edmund Halley, who became England's Astronomer Royal, carefully observed a comet in 1682, checked with previous observations, calculated its orbit and predicted its return to our skies in 1758 or 1759. Halley died in 1742 but the comet, now named after him, reappeared on schedule and a search through ancient records indicated that it had been observed in repeated appearances as far back as 240 B.C. Its last appearance was marked by its perihelion passage in 1910 and its next visit to our skies will occur in 1986. Halley's fulfilled prediction was the first definite proof that comets have regular orbits and time schedules or are, as the astronomers say, "periodic". The known "periods" (time intervals between appearances) of comets vary from the 3.3 years of Encke's Comet to thousands of years for wider travelers. No known great comets are scheduled for appearance in our sky this year.

A curious thing about comets is that their tails always trail from the head in a direction away from the Sun, so that when

a comet is moving away from the Sun, the tail stretches out in front of the head. A comet's tail is so tenuous as to be almost a vacuum. The Earth passed through the tail of Halley's Comet in May, 1910, and on that occasion astronomers heard nothing, felt nothing and saw nothing to indicate that such passage had any observable effect on the Earth.

## 20 Famous Comets

## The Polar Auroras

It has been definitely established that Sun-spots are the direct cause of the greatest electrical show on Earth, a double feature, the Aurora Borealis (Northern Lights) and the Aurora Australis (Southern Lights). Sun-spots are magnetic storms of vast dimensions on the surface of the Sun and they shoot out electrified particles into space. Those that come toward the Earth are drawn toward the Earth's magnetic poles and consequently these magnetic poles are the radiating centers of those spectacular electromagnetic displays in the sky that we commonly call the "Northern Lights" or the "Southern Lights", depending upon whether we see them in the northern or southern hemisphere. The electrical particles from the Sun-spots strike the upper regions of our atmosphere where the component gases (nitrogen, oxygen and extremely minor amounts of argon, helium, neon, hydrogen and carbon dioxide) are very much rarefied and cause them to vibrate and glow in colors characteristic of the various elements, just as a neon sign glows when an electric charge is passed through it. The Sun-spots that cause auroral displays also cause the magnetic storms that interfere

with radio reception, telephone, telegraph and cable traffic and other electromagnetic devices such as compasses and various aviation accessories.

There is an almost infinite variety to the auroral display. The lights may sweep across the sky in waves, in streamers or in folds like draped curtains. Or it may be a stationary glow. Sometimes there is little or no color in these waves, sheets or streamers of light. At other times the lights may be rich in red or green or pastel shades. Rose color and lavender and violet and purple are common. Blue is rare but has been seen. The "Northern Lights" have been seen as far south as New Orleans and the Florida peninsula and the "Southern Lights" have been seen as far north as New Zealand and Australia, but the maximum occurrence of these auroral displays is along the borders of the Arctic and Antarctic regions. Since these are atmospheric displays, our atmosphere must extend to the extreme height at which auroral lights are observed. Prof. Carl Störmer of the University of Oslo found this to be about 600 miles. He further found that no auroral lights came closer to the Earth's surface than 50 or 60 miles. *Illustration by Carl Störmer*

### The Change of Seasons

It is enough to state that the Earth is nearer to the Sun in January than it is in July to convince those who live in the northern hemisphere that there must be some other explanation than that for the seasonal changes on our globe. The reason for the change in seasons is that the axis of rotation of the Earth is tipped to the perpendicular of the plane of its orbit around the sun at an angle of approximately  $23\frac{1}{2}$  degrees (more accurately, it varies in 1954 from  $23^{\circ} 26' 42''.9$  to  $23^{\circ} 26' 46''.8$ ), and consequently there is a proportional shifting of the angle of the Sun's rays falling on different portions of the Earth's surface at different times of year.

On or about June 21 the north end of the Earth's axis is tipped to its limit toward the Sun. In the northern hemisphere this is our Summer Solstice. We then have our longest days and receive a maximum of heat and light from the Sun whose perpendicular rays are falling on the Tropic of Cancer,  $23\frac{1}{2}$  degrees north of the Equator. Six months later, on or about Dec. 21, the Earth has reached a position in its orbit that finds the north

end of its axis tipped at its maximum away from the Sun. This is our Winter Solstice. We then have our shortest days and receive a minimum of heat and light from the Sun that is hovering over the Tropic of Capricorn,  $23\frac{1}{2}$  degrees south of the Equator. Conditions are reversed in the southern hemisphere for obvious reasons. Their Winter is our Summer; their Summer our Winter. Twice a year, at the equinoxes in March and September, the Sun is on the Equator, the day is of equal length all over the world and each hemisphere receives the same amount of light and heat from the rays of the Sun.

If the effect in the change of the angle of the Sun's rays on the Earth's surface were instantaneous, our coldest period would be at the Winter Solstice and our warmest period at the Summer Solstice, but due to the blanket of atmosphere around the Earth and the cumulative effect in the heating or cooling of the Earth's surface, we have "the lag of the seasons" that brings our warmest and coldest periods some five or six weeks after the Sun is "farthest north" or "farthest south".

### Seasons for the Northern Hemisphere, 1954

#### Eastern Standard Time

March 20, 10:54 P.M. Sun enters sign of Aries; spring begins  
 June 21, 5:55 P.M. Sun enters sign of Cancer; summer begins  
 Sept. 23, 8:56 A.M. Sun enters sign of Libra; autumn begins  
 Dec. 22, 4:25 A.M. Sun enters sign of Capricornus; winter begins

### Planet Table

	Mean distance from sun in millions of miles	Period of revolution around the sun	Eccentricity of orbit	Inclination to ecliptic	Diameter	Period of rotation on axis	Inclination of equator to orbit plane	Surface gravity (earth = 1)	Oblateness	Mean velocity in orbit	Max. stellar mag.

\* Period of revolution around the earth.

† This is the rotation at the equator.

‡ Rotation of Venus is uncertain but is probably a few weeks.

§ The equatorial diameters of the earth, Jupiter, and Saturn are given; polar diameters are: earth, 7900.0 mi., Jupiter 82,789 mi., Saturn 87,170 mi.

SATELLITES. The number of known moons in the solar system is now as follows: for the earth 1; Mars 2; Jupiter 12; Saturn 9; Uranus 5; Neptune 2.

## The Moon

The planet Mars has two tiny satellites or moons, Jupiter has twelve, Saturn nine, Uranus five, and Neptune two. The Earth has one comparatively large satellite that is commonly called the Moon. It is a globe of approximately 2160 miles in diameter with a surface deeply pitted by great craters. It has no atmosphere that astronomers can detect and shines only by reflected light of the Sun. Though it seems bright to us at "full moon", it reflects only about 7 per cent of the light poured on it by the Sun.

The path of the Moon on its travels around the Earth is elliptical, with the Earth at one focus of the ellipse. The distance of the Moon from the Earth varies from 221,463 miles (perigee) to 252,710 miles (apogee), the average distance being 238,860 miles. The really curious thing about the Moon is that it revolves around the Earth in 27 days, 7 hours, 43 minutes, 11.47 seconds and rotates on its axis in exactly the same time, which is why we always see the same side of the Moon. Due to what are known as "librations in latitude and longitude" and also a "diurnal libration", we do see "around the edge of

the Moon" at different times and in this manner a total of 59 per cent of the Moon's surface has been observed, but the other 41 per cent never has been seen by human eye.

Although the Moon revolves around the Earth in approximately 27½ days, it is, on the average, a matter of 29½ days (29 days 12 hours, 44 minutes, 2.78 seconds) from one New Moon to the other because the Earth is moving around the Sun while the Moon is moving around the Earth and the "New Moon" depends upon the relative positions of the three bodies. If the planes of orbit of the Earth and the Moon coincided, there would be an eclipse of the Moon at every "Full Moon" and an eclipse of the Sun at every "New Moon", but the (approximately) 5-degree angle between the planes of orbit of the Earth and the Moon causes the Moon on most of its revolutions to miss the Earth's shadow and the Moon's shadow on most trips to miss falling on the Earth. The tidal effects of the Moon are, of course, well known. The "Spring Tides" occur at "Full Moon" and "New Moon" and the "Neap Tides" at "First Quarter" and "Last Quarter".

## Eclipses in 1954

1. *Annular eclipse of the sun, Jan. 4.* An unimportant eclipse, the path of the annular phase being confined to west Antarctica and surrounding polar seas, and the partial phase (of small magnitude) being seen at New Zealand.

2. *Total eclipse of the moon, Jan. 18-19,* visible in general in Europe, Africa, North America, and South America. In the Pacific states the beginning stages are invisible, as the moon rises under partial eclipse.

Eastern standard time

Moon enters penumbra	Jan. 18, 6:40 P.M.
Moon enters umbra	18, 7:50
Total eclipse begins	18, 9:17
Mid-eclipse	18, 9:32
Total eclipse ends	18, 9:47
Moon leaves umbra	18, 11:14 P.M.
Moon leaves penumbra	19, 0:24 A.M.

3. *Total eclipse of the sun, June 30.* The path of totality begins at sunrise in northern Nebraska and goes northeast across Minnesota, Wisconsin, Lake Superior, Ontario, and Quebec, south of James Bay, leaving the coast of Labrador near Okkak at 7:56 A.M., Newfoundland time. It crosses the southern tip of Greenland and goes just south of Iceland and across the southern part of Scandinavia, eastern Europe (just north of Kiev), the southern Caspian Sea, and into southern Asia, ending at Jodhpur, India, at sunset. Partial phases cover Canada, the U. S. (except the s.w. part), Europe, northern and central Asia, and northeastern Africa. The middle of the eclipse occurs at the following places

with the times and the magnitude of eclipse indicated:

	E.S.T.	mag.
Atlanta, Ga.	5:53 A.M.	0.68
Cincinnati, O.	5:59	0.81
Philadelphia, Pa.	5:59	0.73
New Haven, Conn.	6:00	0.74
New York, N. Y.	6:00 A.M.	0.74
Springfield, Ill.	6:01 A.M.	0.87
Kansas City, Mo.	6:02	0.90
Syracuse, N. Y.	6:02	0.81
Des Moines, Iowa	6:05	0.95
Augusta, Me.	6:05 A.M.	0.78

4. *Partial eclipse of the moon, July 15,* visible mostly in the eastern hemisphere, but the ending is visible in eastern and southeastern North America. The early stages of the eclipse occur before moonrise in the U. S. For the eastern states the middle stage to the end of eclipse is visible, the middle being at 7:20 P.M., E.S.T.; but at the maximum only 0.4 of the moon's diameter is obscured. For the central states only the last stages are visible, the moon leaving the umbra at 7:31 P.M., C.S.T.

5. *Annular eclipse of the sun, Dec. 25.* The path of the annular phase goes across the southern part of Africa, between Port Nolloth and Port Alfred (but missing Capetown) and across the Indian Ocean and Timor, ending at the Arafura Sea. Partial phases are seen from the southern part of Africa, Australia, and many islands of Australasia. The greatest duration of the annular phase is 7m 40s, occurring in the Indian Ocean.

Astronomical Constants

\* t refers to the year in question, for example 1948.

The Atmosphere

The atmosphere of the Earth—the blanket of air that surrounds our globe and is essential to life—is of interest to astronomers because of its effect on the light that comes to us from heavenly bodies. Air has weight and volume. It refracts (bends or changes the direction of) light rays that enter it. Due to this refraction, we are able to see the Sun and the Moon before they rise and after they set. The “twinkling” of the stars is caused by convection currents in the air that have a rapidly changing refractive effect on the light from the stars. Our twilight is produced by the diffusion in the atmosphere of light from the Sun when it is below the horizon. Meteors become visible when they are heated to incandescence by friction with the atmosphere when, from outer space, they plunge into it at terrific speed.

Prof. Carl Störmer of the University of

Oslo measured the height of the atmosphere and found it to be more than 600 miles, but about half of it by weight is below 18,000 feet. Although we may remark blandly that something is “as light as air”, the Earth’s atmosphere in bulk is of such enormous weight that at sea level it exerts a pressure of approximately 14.7 pounds per square inch. At higher levels, of course, the pressure is less.

Chemically, the atmosphere is composed of nitrogen (approximately 78 per cent by volume), oxygen (approximately 21 per cent by volume), and extremely minor amounts (about 1 per cent in all by volume) of argon, neon, helium, hydrogen and carbon dioxide. There is also present in the air a varying amount of water vapor, which is known as humidity and is distressing when the percentage is high in warm weather.

Important Meteor Showers

Date	Meteor stream	Radiant in constellation
Jan. 1-4	Quadrantids.....	Boötes
Feb. 5-10	Alpha Aurigids.....	Auriga
Mar. 10-12	Zeta Boötids.....	Boötes
Apr. 19-23	Lyrids.....	Hercules
May 1-6	May Aquarids.....	Aquarius
May 30	Eta Pegasids.....	Pegasus
June 27-30	Pons-Winnecke meteors.....	Draco
July 14	Alpha Cygnids.....	Cygnus
July 26-31	Delta Aquarids.....	Aquarius
Aug. 10-14	Perseids.....	Cassiopeia
Aug. 10-20	Kappa Cygnids.....	Cygnus
Aug. 21-31	Zeta Draconids.....	Draco
Sept. 22	Alpha Aurigids.....	Auriga
Oct. 2	Quadrantids.....	Boötes
Oct. 9	Giacobinids.....	Draco
Oct. 18-23	Orionids.....	Orion
Nov. 14-18	Leonids.....	Leo
Dec. 10-13	Geminids.....	Gemini

Meteors and Meteorites

Meteorites are meteors that have come down to Earth. Meteors are masses of mineral or metal or both that plunge into the Earth’s atmosphere at great speed and become incandescent from the resultant friction so that they are seen in the sky as “fireballs” (bolides) or “shooting stars”. The “fireballs” are the larger, make a greater flash across the sky and sometimes explode. Meteors come in all sizes but most of them verge on the microscopic and burn up completely in the flash that makes them visible from 40 to 60 miles above the Earth’s surface. Millions of them enter our atmosphere every twenty-four hours and probably not more than one or two a day survive to strike the ground as meteorites.

The largest meteorite ever found is located near Grootfontein, Southwest Africa, and its weight is estimated between 50 and

70 tons. The second largest meteorite (the Ahnighito, weight  $36\frac{1}{2}$  tons) was found by Admiral Peary, Arctic explorer, at Cape York, Greenland, and is now on exhibition in the Hayden Planetarium, New York City. The largest meteorite found on United States soil is the Willamette (weight  $15\frac{1}{2}$  tons), which fell near Portland, Oreg., and is now in the American Museum of Natural History, New York City.

Craters produced by the fall of meteorites have been found in many countries. The first to be recognized and the largest known is Meteor Crater in Arizona, a depression about 4,000 feet in diameter, about 600 feet deep, and with exterior walls rising 150 feet above the surrounding plain. Me-

teor craters have been found near Odessa, Texas; Haviland, Kansas; in the Arabian Desert; in Central Australia and—a notable group of fifty or more—in the region of the Stony Tunguska River in northern Siberia.

Many meteors travel in swarms, believed in some cases to be disintegrated comets. The Perseid shower that occurs annually Aug. 10-14 is thought by some astronomers to be all that remains of Tuttle's Comet and the Leonid shower, which reaches a maximum in mid-November every 33 years, similarly is suspected of being what is left of Tempel's Comet. The Leonid shower of 1833 was the greatest meteor display of which astronomers have record.

### Projection Planetaria

Dr. Robert G. Aitken, Director Emeritus of the Lick Observatory, called the Zeiss Projector in planetarium use "the most remarkable instrument that has ever been devised to exhibit impressively, and with the illusion of reality, the motions of the heavenly bodies and the phenomena that result from these motions". The first of these projectors was invented and developed by Dr. Walter Bauersfeld at the Carl Zeiss plant at Jena, Germany, and the first planetarium in which it was put to use was in the Deutsches Museum in Munich, May, 1925. Between that time and the outbreak of World War II, twenty-seven other such Zeiss Projectors were constructed and shipped for use in planetaria spread around the world. Some smaller planetaria, with other projectors, have been built and are in operation in various places in the United States and Canada.

The Zeiss Projector planetaria in the

United States are, in the order in which they were built:

Adler Planetarium, 900 E. Achsah Bond Drive, Chicago 5, Ill.

Director, Wagner Schlesinger.

Fels Planetarium, 20th St., Benjamin Franklin Parkway, Philadelphia 3, Pa.

Director, I. M. Levitt.

Griffith Planetarium, P.O. Box 9787, Los Feliz Station, Los Angeles 27, Calif.

Director, Dinsmore Alter.

Hayden Planetarium, 81st St., Central Park West, New York 24, N. Y.

Chairman, Robert R. Coles.

Buhl Planetarium, Federal and West Ohio Sts., Pittsburgh 12, Pa.

Director, Arthur L. Draper.

Morehead Planetarium, University of North Carolina, Chapel Hill, N. C.

Manager: A. Jenzano.

## Notable Telescopes of the World

### Refractor Telescopes

Size in inches	Observatory	Location
40	Yerkes	Williams Bay, Wis.
36	Lick	Mt. Hamilton, Calif.
32.7	Paris (Univ. of)	Meudon, France
31.5	Astrophysical	Potsdam, Germany
30	Allegheny	Pittsburgh, Pa.
30	Bischoffsheim	Nice, France
30	Poulkova	Leningrad, U.S.S.R.

### Reflector Telescopes

200	Palomar	Palomar Mt., Calif.
100	Mt. Wilson	Pasadena, Calif.
82	McDonald	Mt. Locke, Texas
74	Dunlap	Richmond Hill, Ont.
72	Lord Ross (dismantled)	Parsonstown, Ireland
72	Dominion Astrophysical	Victoria, B. C.
69	Perkins	Delaware, Ohio
61	Harvard	Oak Ridge, Mass.
60	Blomfontein	Blomfontein, U. of S. Af.
60	Mt. Wilson	Pasadena, Calif.
60	Córdoba	Bosque Alegre, Argentina

### Astronomical Photography

Since almost all astronomical research is now carried on by photographing the heavenly bodies, cameras and telescopes designed for this purpose are of the utmost importance.

What many astronomers consider the greatest advance in the making of astronomical instruments in the last fifty years was the production of the Schmidt Camera. The details of construction and method of operation of this camera were made known in 1930 by Bernhard Schmidt of the Hamburg Observatory at Bergedorf, Germany. The Schmidt Camera takes photographs with large fields of vision and sharp definition at much greater speed than was possible with earlier apparatus. Schmidt Cameras as fast as  $f/0.6$  have been made, and those with a speed of  $f/1$  are common. These remarkable cameras have been installed at many observatories in various parts of the world.

---

## Afghanistan (Kingdom)

Area: approx. 270,000 square miles.  
Population (est. 1951): 12,000,000 (approx. 53% Afghan, 36% Tadzhik, 11% Mongolian and others).

Density per square mile: 44.

Ruler: Mohammed Zaher Shah.

Prime Minister: Sardar Shah Mahmud.

Principal cities (est. 1950): Kabul, 307,000 (capital); Kandahar, 195,000 (trading center); Herat, 150,000 (farming center).

Monetary unit: Afghani rupee.

Languages: Pushtu (official), Persian.

Religion: Mohammedan (Sunni, 90%; Shia, 10%).

**HISTORY.** Wedged between Pakistan, Iran and the U.S.S.R. in southwestern Asia without outlet to the sea, Afghanistan did not become an independent state until 1747. Previously, it had been either a cluster of small states under nominal Arab rule, part of Mongol or Mogul empires, or dismembered among India, Persia and the Uzbeks.

By the 19th century Afghanistan had passed into the British sphere of influence, though the British had to dispatch troops more than once to enforce Afghan friendliness. In 1880 the British recognized Abdur Rahman Khan as Emir and gave him an annual subsidy of more than \$500,000 to delegate management of his foreign relations to Britain. His son, Habibullah, succeeded him in 1901 and kept Afghanistan neutral in World War I despite strong pressure of pro-Turkish elements.

On Aug. 8, 1919, a treaty was signed making Afghanistan free and independent of all British control. The country maintained strict neutrality in World War II, and was admitted to the United Nations in Nov., 1946. Relations with Pakistan have

been strained by a dispute over areas inhabited by the Pathans in the North West Frontier Province.

**GOVERNMENT.** Under the 1932 constitution, Afghanistan is a constitutional monarchy, with authority vested in the sovereign and parliament, which has a senate of 50 members who are named for life by the sovereign and a national assembly of 171 elected members. Executive power is exercised by the sovereign and cabinet headed by the prime minister. The sovereign, Mohammed Zaher Shah, was born Oct. 15, 1914.

Military service is compulsory. The army strength is about 90,000, supplemented by tribal bands. There is a small air force.

**SOCIAL AND ECONOMIC CONDITIONS.** Education is nominally compulsory. Primary schools exist in many parts of the country, but secondary schools only in Kabul and provincial capitals. There were 100,250 pupils in 334 elementary schools in 1951. There were also 32 secondary schools and a university at Kabul.

Only a fifth of the soil is under cultivation, the greater part of the country being mountainous and rocky. Farming is confined to the fertile valleys and plains, sometimes with the aid of irrigation. Two crops a year are usually grown. Important ones include fruits and nuts, castor beans, cereals, madder, tobacco, cotton and vegetables. Wheat is the staple food. The fat-tailed indigenous sheep is the principal source of meat, wearing apparel and skins for export. Camels, humped cattle, oxen and asses are numerous.

Important manufactures include silk, felt, sheepskin coats, soap, carpets and

boots. Factories have been erected by government monopolies to produce skins, sugar, textiles, vehicles, and power.

Among the leading exports are karakul skins (mostly to the U.S.), cotton, wool, rugs, carpets and dried fruits.

Most of the trade normally is carried on through Pakistan; wool is exported to the U.S.S.R. in return for consumers' goods. Exports in 1948-49 were estimated at Rs. 900,000,000 and imports at slightly less.

Afghanistan has no railways or navigable streams. Camels and pack horses are still used by the natives, but motor transport is of increasing importance. The principal trade routes lead south through the Khyber and Khojak Passes to Pakistan, and north to the Uzbek and Turkmen Soviet Socialist Republics. There are about 6,000 miles of roads suitable for motor transport.

Both mineral and forest resources are largely unexploited. There are deposits of chromite, coal, copper, gold, iron ore, oil and silver. Timber and gum resin are obtained.

**NATURAL FEATURES; CLIMATE.** Afghanistan, approximately the size of Texas, is split east to west by the Hindu Kush range of the Himalayas, rising in the east to heights of 24,000 feet. Except in the southwest, most of the country is covered by high snow-capped mountains and deep valleys. The few passes are deep and narrow. The Amu Darya (Oxus), Kabul and Helmand are the most important rivers, and there are hundreds of swift and unnavigable mountain streams. The climate ranges from extremes of below zero to more than 100° in the north; however, it is not so extreme in the south, although snowfall is heavy all over the country in winter. Rainfall, chiefly in the spring, is relatively light. The hottest weather occurs in summer and is particularly severe around Kandahar.

## Albania (Republic)

(Shqipëria)

Area: 10,629 square miles.

Population (est. 1951): 1,200,000 (Albanian 99.8%; others, .2%).

Density per square mile: 112.9.

Chairman of Presidium: Omer Nishani.

Premier: Enver Hoxha.

Principal cities (est. 1949): Tirana, 40,000 (capital); Scutari, 30,000 (northern trading center); Koritsa, 28,000 (farming center).

Monetary unit: Lek.

Language: Albanian.

Religions (est.): Moslem, 69%; Orthodox Christian, 21%; Roman Catholic, 10%.

**HISTORY.** A tiny, backward state approximately the size of Maryland, Albania has acquired considerable importance since World War II because of its close ties with

the Soviet Union and its strategic location at the mouth of the Adriatic. After the fall of the Roman Empire, Albania became part of the Byzantine Empire and was successively invaded by Goths, Serbs and Bulgarians. From 1014 to 1204 it was again under Byzantine rule. An alliance of Albanian chieftains (1444-66) under Skanderbeg failed to halt the advance of the Turks and the country remained under at least nominal Turkish rule for more than four centuries, until it proclaimed its independence on Nov. 28, 1912.

During World War I Albania was variously occupied by Italian, Greek, French, Serb and Austro-Bulgarian forces. On Aug. 2, 1920, Italy recognized Albanian independence and evacuated the country. Ahmed Zogu, premier in 1922-23, ousted the government of Mgr. Fan Noli in 1924 and became president of a newly constituted republic in 1925. Three years later, after concluding pacts which placed Albania in Italy's sphere of influence, Zogu proclaimed himself King Zog I.

In 1939, Italy occupied the country in a matter of days. During the Greco-Italian war of 1940-41, the Greek armies pushed the Italians back from the Albanian border and occupied a large part of southern Albania. When Germany attacked Greece and Yugoslavia in April, 1941, however, the Greeks withdrew quickly, and the Axis occupation of Albania was complete.

Albania was free of the Axis yoke by the end of 1944, and a leftist provisional government under Colonel General Enver Hoxha was established. That regime was confirmed in power by subsequent elections, and British, Soviet and U. S. recognition. Since then, Albania has collaborated closely with the Soviet Union and supported Moscow and the Cominform in the latter's break with the Tito regime in Yugoslavia. Albania also quarreled frequently with Greece and the western powers. Two main sources of dispute with Greece were the latter's claim to the Albanian territory of Northern Epirus and its charge that Albania was arming anti-government Greek guerrillas.

International tension rose in 1947 when two British destroyers were sunk by mines in the Corfu channel. Britain lodged a sharp protest and referred its complaint to the U. N. Security Council. The Council's decision, favorable to Britain, was vetoed by the U.S.S.R., and Britain carried its case to the International Court of Justice, which ruled on April 9, 1949, that Albania should pay damages to Britain. No settlement was made, however.

**GOVERNMENT.** Under its 1945 constitution, Albania has a typical soviet government. Supreme power is vested in the popularly elected national assembly, to which the cabinet, headed by the premier,

is responsible. The army, estimated at 60,000 men, has liaison with the U.S.S.R.

Albania's sovereignty over Saseno, a small but strategic Adriatic island, was confirmed by the Italian peace treaty of 1947.

**SOCIAL AND ECONOMIC CONDITIONS.** Primary education is nominally compulsory, but illiteracy is high, especially among women. There is a teachers' college at Tirana.

Albanians are called Ghegs and Tosks, according to whether they live north or south of the Shkumbi River. They live in clans or tribes, in a feudal manner. Moslems predominate in most sections.

Albania is still a primitive country where each family tries to provide most of its own needs. Nearly the whole population is engaged in combined farming and stock-raising. Only a small portion of the central part is fit for tilling. Corn is the chief crop. Others are wheat, tobacco, oats, barley, rye, spelt, olives and citrus fruit. Only a few factories are engaged in processing Albania's agricultural products.

Albania's postwar trade has been limited in volume. Exports include wool, hides, fur, dairy products and bitumen.

Railway mileage totaled only about 81 in 1951, linking Durazzo with Tirana and Elbasan. Good highways were developed by the Italians for strategic purposes, and the Russians continued such construction. The principal and only fully equipped port is Durazzo.

Mineral wealth, thought to be considerable, is relatively unexploited. The principal minerals are aluminum and petroleum, which were developed to some extent during the Italian occupation of 1939-44. There are also deposits of lignite, bitumen, asphalt, gypsum, copper and iron.

Forest resources include large stands of oak, walnut, chestnut and elm, and in the high regions, beech, pine and fir.

**NATURAL FEATURES; CLIMATE.** Albania is a mountainous state, largely over 3,000 ft. above sea level, with a narrow marshy coastal plain crossed by several rivers. A complex, often inaccessible mountainous hinterland encloses small fertile basins, and contains some wide valleys, of which the largest is that of Lake Ohrid in the southeast. The interior mountain plateaus and basins contain the centers of population. With the exception of the Bojana in the northwest, which is the outlet of Lake Scutari (135 sq. mi.) to the Adriatic, there are no navigable rivers.

The climate is typically Mediterranean, with dry, hot summers and moderate winters. Inland temperatures are lower than those on the coast. Winter frosts occur in the southern part of the country.

## Arabia

The Arabian peninsula is at the southwest extremity of Asia. Its rich oil deposits and proximity to Palestine gave it special importance after World War II. Once a political unit, today it consists of the kingdoms of Saudi Arabia and Yemen, the British colony of Aden and six British protectorates.

The peninsula, with an area more than three times that of Texas, and an extreme length of 1,400 miles, is generally a plateau sloping gently eastward from a mountain range that averages 5,000 feet in elevation and runs along its entire west side within ten or fifteen miles of the Red Sea. The range reaches a maximum of 12,336 feet in Yemen to the southwest. Arabia has no rivers and no forests and is principally a desert dotted with many oases.

Most of the peninsula, particularly the interior, has a hot desert climate with frequent changes in temperature. The highlands of the Yemen and southwestern Saudi Arabia, however, together with parts of Oman, have a temperate climate. Jidda, on the Red Sea, has an average daily high temperature of 93° during August.

Mohammed united all Arabs in the 7th century A.D., and his followers, led by the caliphs, founded a great empire with its capital at Medina. Later, the caliphate capital was transferred to Damascus and then Baghdad, but Arabia retained its importance because of the holy cities of Mecca and Medina. In the 16th and 17th centuries, the Turks established at least nominal rule over much of Arabia, and in the middle of the 18th century it was divided into separate principalities.

Through agreements with local rulers, the British extended their rule over the southern and eastern coasts in the 19th century. At the same time, the Wahhabis, a religious sect advocating strict adherence to Mohammed's teachings, gained control over most of central and eastern Arabia, and their work was the beginning of the present Saudi Arabia.

### Political Divisions of Arabia

Name	Area (sq. mi.)	Population (est. 1951)
Aden colony (British)	80	100,000
Aden protectorate†	112,000	650,000
Bahrain Islands		
(Sultanate)†	213	110,000
Kuwait (Sheikdom)†	9,000	170,000
Oman and Masqat		
(Sultanate)†	65,000	550,000
Qatar (Sheikdom)†	4,000	17,000
Saudi Arabia		
(Kingdom)	597,000	6,000,000
Trucial Coast (Sheikdoms)†	16,000	80,000
Yemen (Kingdom)	31,000	1,600,000

†British protectorate.

### Saudi Arabia (Kingdom)

The most important state of the peninsula is almost solely the creation of King Ibn Sa'ud. In 1901, at the age of twenty, he seized the emirate of Riyadh and soon set himself up as the leader of the Arab nationalist movement. During World War I he collaborated with the famous T. E. Lawrence in the successful "desert revolt" against Turkey. On the collapse of Turkey at the end of the war, he freed the whole peninsula from Turkish rule, and through a series of local military campaigns was able to proclaim himself King of Hejaz and Nejd and dependencies in 1927. His territories became the Kingdom of Saudi Arabia in 1932.

Hejaz and Nejd are still under separate administrations. In Nejd, whose capital is Riyadh, Ibn Sa'ud's rule is absolute. The eldest of his numerous sons, Prince Sa'ud, acts as viceroy in his absence. The constitution of Hejaz, whose capital is Mecca, provides for a cabinet of ministers headed by the King's second son, Prince Faisal, who likewise acts as viceroy in his father's absence. There is a consultative legislative assembly in Mecca and various municipal village and tribal councils whose members are named or approved by the King.

The majority of the inhabitants are Bedouin—nomads following their flocks over the desert. There are a few large towns—Mecca, birthplace of the Prophet (150,000), Medina, site of the tomb of the Prophet (45,000), Jidda, port of Mecca on the Red Sea (40,000), and Riyadh, capital of Nejd (60,000).

In Hejaz, Medina produces dates in the oases, and fruit and honey; otherwise, its products are such desert commodities as camels, horses, sheep, hides, charcoal and wool. The most important commercial activity outside of the oil industry is the annual influx of Moslem pilgrims to Mecca and Medina. The products of Nejd include dates, wheat, barley, hides, wool, fruits, butter, camels and livestock.

Oil is produced by the U. S.-owned Arabian-American Oil Company (Aramco), whose main field is at Dharan near the Persian Gulf coast. Production has skyrocketed since World War II. The company's expenditures and payroll are important invisible exports, and royalties have immensely strengthened the financial position of the kingdom, which receives one-half the company's profits under an agreement announced Jan. 2, 1951. A pipe line running north from Damman through Jordan and Syria to the Mediterranean port of Sidon, Lebanon, went into operation in 1951. In 1952, petroleum production totaled 301,860,885 barrels; the crude run at Aramco's Ras Tanura refinery was 62,204,161 barrels.

A railroad between Damman and Riyadh

(345 mi.), completed in Oct. 1951, is being extended across the peninsula to Medina and Jidda. Numerous other public work projects are being carried out by U. S. engineers. Air transportation is provided by TWA, BOAC and the government-owned Saudi Arabian Airlines.

### Kuwait (Sheikdom)

Kuwait, on the northwestern shore of the Persian Gulf, is an independent state ruled by Sheik Abdullah as-Salim as-Subah. British protection, first exercised in 1898, has several times prevented it from being absorbed by Saudi Arabia. The territory surrounding Al Kuwait, its port, is largely desert; its trade consists of exchanging Arab goods from the interior for textiles, rice, sugar and other necessities. Kuwait's petroleum reserves, estimated at 9 billion barrels, are under concession to the Kuwait Oil Co., which under an agreement announced Dec. 3, 1951, pays one-half its profits to the Sheik. Production, which began only in 1945, totaled 273,432,895 barrels in 1952. Production is concentrated at the Burgan field, from which petroleum is piped to the new port of Ahmadi for shipment.

### Oman and Masqat (Sultanate)

Occupying the mountainous southeastern part of the peninsula, Oman is nominally an independent state under the rule of Sultan Sayyid Sa'id bin Taimur. It has been under British protection since the 19th century. The state is best known for its date cultivation, and its riding camels are considered the best in the world. Trade is mainly to and from India. The capital, Masqat (population 4,200), commands the entrance to the Persian Gulf.

### Qatar (Sheikdom)

Qatar occupies the whole of the Qatar peninsula in the Persian Gulf. It is ruled, under British protection, by Sheik Abdullah ibn Jasim eth Thani. The whole area is claimed by Saudi Arabia. Oil deposits are being exploited by a subsidiary of the Iraq Petroleum Co.; output in 1952 was 3,245,343 long tons (about 24,000,000 barrels).

### Trucial Coast (Sheikdoms)

This area, extending along part of the Gulf of Oman and the southern coast of the Persian Gulf, is ruled by 7 semi-independent sheiks. Treaties signed with Britain in 1853 and 1892 provided that the sheiks should not cede or sell any part of their land to any other power.

### Yemen (Kingdom)

Yemen is an independent state occupying the southwestern extremity of the peninsula. Its ruler is Imam Ahmad, who succeeded to the throne, Mar. 1948, after insurgents murdered his father, Yahya.

Its sovereign status was confirmed by the Treaty of San'a with Britain and India

(Feb. 11, 1934) and the Treaty of Taif concluded with Saudi Arabia at the cessation of hostilities between the two states on May 13, 1934. The people are permanently settled and are for the most part engaged in agriculture, fishing and trade. Chief products are Mocha coffee, and sheep and goat skins. Much of the trade goes through the port of Aden. The capital and principal town is San'a (population about 25,000).

(For Aden and Bahrein Islands, see British Commonwealth: Asia)

## Argentina (Republic)

### (República Argentina)

Area: 1,079,965 square miles.  
Population (est. 1952): 18,056,000 (approximately 97% of European descent, chiefly Spanish and Italian; 3% Indian and other).

Density per square mile: 16.7.

President: Juan D. Perón.

Principal cities (est. 1950): Buenos Aires, 3,371,000 (capital and chief port); (census 1947) Rosario, 464,688 (flour milling); Córdoba, 351,644 (northwest farming center); Avellaneda, 279,572 (industrial suburb of Buenos Aires); Eva Perón (formerly La Plata), 271,738 (seaport, meat packing); Lanús, 242,760 (suburb of Buenos Aires).

Monetary unit: Peso.

Languages: Spanish (official), Italian.

Religion: Roman Catholic (state-supported).

**HISTORY.** Discovered in 1516 by Juan Díaz de Solís, Argentina developed slowly under Spanish colonial rule. Buenos Aires was settled permanently in 1580 and became a prosperous city; the cattle industry of the Argentine pampas was thriving as early as 1600.

Invading British forces were expelled in 1806-07, and when Napoleon conquered Spain, the Argentinians set up their own government in the name of the Spanish king in 1810. On July 9, 1816, independence was formally declared. Internal dissension, particularly between Buenos Aires and the provinces, was put down under the dictator Juan Manuel de Rosas, who brought about unification from 1829 to 1852. Rosas was overthrown by Justo José de Urquiza, who became the first president under the 1853 constitution, modeled after that of the U. S.

Argentina made great material progress under Presidents Sarmiento (1868-74), Avellaneda (1874-80) and Roca (1880-86). The secret ballot was introduced in 1910 by President Roque Sáenz Peña.

President Hipólito Irigoyen (1916-22) refused to abandon Argentinian neutrality in World War I. Re-elected in 1928, Irigoyen, a radical, was ousted two years later by a conservative revolution led by General José Uriburu. The latter's successor, General Agustín Justo (1932-38) followed

a moderate policy and undertook a large public works program. Under the leadership of a former radical, Roberto M. Ortiz, Argentina proclaimed neutrality at the outbreak of World War II, but in general co-operated in hemispheric defense programs.

Ortiz resigned because of illness in June, 1940, and was succeeded by Vice President Ramón Castillo, a conservative, whose regime was toppled in June, 1943, by a revolt led by General Pedro P. Ramírez. The latter abolished all political parties and broke relations with the Axis on Jan. 26, 1944, after disclosures of German spy activity in Argentina. A clique of army officers, apparently fearing that this would lead to war with Germany, replaced Ramírez on Feb. 24, 1944, with General Edelmiro Farrell.

In the closing months of World War II, Farrell's regime declared war on the Axis (March 27, 1945) and signed the Act of Chapultepec the following April 4. Diplomatic recognition and admission to the U. N. followed. Juan D. Perón, then an army colonel, emerged as strongman and won the 1946 presidential elections. Congress became completely controlled by Perón supporters. Perón was re-elected Nov. 11, 1951, in an election in which the opposition was denied freedom of speech, press and assembly.

**GOVERNMENT.** Argentina is a federal union of sixteen provinces and eight territories. Under the new constitution promulgated in 1949, a president and vice president are elected every six years by direct popular vote. The president appoints his cabinet. The vice president presides over the Senate but has no other powers. Both executives are eligible for re-election. The National Congress has two houses—a 34-member Senate which is popularly elected for six-year terms, and a Chamber of Deputies (one for each 100,000 electors) popularly elected for six years, one-half the membership of each house being renewed every three years.

Each province has its own constitution, elected governor, legislature and judiciary, but the president may in a crisis take over the local government.

The president, with Senate approval, appoints for life terms the judges of the federal supreme court, five courts of appeal, and district courts (at least one in each province).

**DEFENSE.** Under legislation enacted Nov. 29, 1946, all men and women 12 to 50 are subject to military service at the president's discretion. Service from 20 to 22 is compulsory. Active army strength in 1950 was estimated at 100,000; a complete modernization program was under way.

The air force has about 150 combat planes. The navy in 1952 totaled approxi-

mately 110,000 tons, including two modernized battleships, five light cruisers and 11 fleet destroyers. The budgetary allotment for defense in 1951 was 25 per cent.

**EDUCATION.** Argentina's estimated illiteracy rate of 7-10 per cent is the lowest in all Latin America. Education is free, secular and compulsory between six and fourteen. In 1951 there were 15,874 primary schools with 2,446,138 pupils, 3,264 public and private secondary, normal and special schools with 521,132 students and 6 national universities with 90,201 students.

**AGRICULTURE.** A farming and stock-raising nation, Argentina devotes 41 per cent of its area to pasture and 11 per cent to cultivation. More than 70 per cent of the cultivated land is planted in cereals, and approximately 20 per cent is in alfalfa for stock feed. Cotton, sugar cane and fruits are important, and Argentina is the world's largest producer of yerba maté (Paraguay tea), the national beverage. The 1952 wine production was about 317,000,000 gallons.

Estimated crop production for 1952, in metric tons, was as follows: wheat, 6,000,000; oats, 1,100,000; barley, 900,000; (1951): maize, 1,990,000; linseed, 302,300; sunflower seed, 660,000; raw cotton, 399,000.

Cattle raising predominates on the pampas, especially in Buenos Aires province. Sheep raising is more important in Patagonia. In 1951 there were about 43,000,000 cattle; in 1947, 50,856,556 sheep, 2,981,406 hogs and 7,237,663 horses. Wool production in 1952 was 210,000 short tons.

**MANUFACTURING.** Industrial expansion was accelerated during World War II by the shortage of imports, but industry is still closely allied to agriculture. The principal industry is meat refrigeration, followed by flour milling, textiles, sugar refining, dairy products, quebracho extraction and wine. In 1941 there were 57,940 industrial establishments (101,884 in 1947); products were valued at 6,337,000,000 pesos (7,800,000,000 in 1943). The number of industrial workers was 918,000 in June 1950.

**TRADE.** Argentina's trade position, favorable in the immediate postwar period, deteriorated as dollar exchange became scarcer. Trade statistics are as follows (in millions of pesos):

	1950	1951	1952
Exports	5,427.3	6,709.2	4,392.0
Imports	4,821.1	10,491.9	8,361.0

Leading exports in 1951 were cereals and linseed (23%), meat (16%), wool (14%) and hides (9%). Imports included machinery and vehicles (19%), iron and steel (15%) and fuel (10%). Exports in that year went principally to the U. S. (18%), Britain (18%) and Brazil (10%). Principal suppliers were the U. S. (20%), Brazil (9%) and Britain (7%).

**COMMUNICATIONS.** According to *Lloyd's Register*, the merchant fleet on June 30, 1952, consisted of 365 steamers and motorships (100 tons and over) aggregating 1,033,571 gross tons. Chief Argentine ports are Buenos Aires, second only to New York in the western hemisphere, and Eva Perón (La Plata), both on the Plata estuary; and Rosario, a port on the Paraná River.

Railway mileage is about 27,000, nearly all of which radiates outward from Buenos Aires. With the purchase in 1947-48 of the British- and French-owned railways, the system is now government-owned. Highway mileage is upwards of 300,000, largely unimproved. Telephones in Jan. 1952 totaled 852,327; broadcasting stations (1951) 58; radio sets, 2,200,000. The air transportation system is government-owned; domestic air routes extend as far south as Tierra del Fuego. Direct international connections with the rest of the world are maintained by numerous international airlines.

**FINANCE.** The 1953 budget, as passed by Congress, totaled 15,791,500,000 pesos, distributed as follows: national administration, 8,320,900,000 pesos (covered by general revenue with surplus of 33,600 pesos); public works, 1,110,000,000 pesos (to be covered by borrowing); special accounts, 2,703,000,000 pesos (self-balancing); autonomous agencies, 3,657,600,000 pesos (self-balancing). Allocations for the 1953-58 five-year plan were to be made later. The national debt was 18,158,400,000 pesos on Dec. 31, 1950.

**TOPOGRAPHY.** Second in South America to Brazil in size and population, Argentina is about 2,070 miles long and 860 miles wide at the maximum. In general, the country is a plain, rising westward from the Atlantic to the Chilean border and the towering Andes peaks, including Aconcagua, 22,835 feet, the highest peak in the world outside Asia. The northern area of the Argentine plain is the swampy and partly wooded Gran Chaco. South of that to the Río Negro are the rolling, fertile pampas, rich for agriculture and grazing, and supporting most of Argentina's population. Next southward is Patagonia, a region of cool, arid steppes with some wooded and fertile sections. The eastern part of Tierra del Fuego, the island southern tip of South America, belongs to Argentina.

**CLIMATE.** Except for the northern Gran Chaco, which has mild winters and torrid summers, Argentina lies in the south temperate zone. The pampas region has an average temperature of 60°, and freezing is rare. Temperature extremes increase progressively southward. All over Argentina, January is the warmest month and June and July are coolest. At Buenos Aires,

the mean annual temperature in January-February is about 73°; in June-July, 50°. The heaviest rainfall, over sixty inches a year, hits the Gran Chaco, while on the pampas it ranges from twenty inches in the west to forty in the northeast.

**RIVERS.** The three great rivers forming the Plata system—the Paraná, Paraguay and Uruguay—are important commercial arteries in northern Argentina. Rosario and Santa Fé, 260 and 360 miles respectively above Buenos Aires on the Paraná, are accessible to ocean vessels. Many other river ports lie along the three streams' total navigable length of 1,997 miles.

**MINERALS.** Argentina must import most of nearly every mineral it uses. Oil is produced in Patagonia (1952: 25,000,000 barrels), and there is small mining of tungsten, lead, gold, zinc, tin, silver and beryllium. The government announced discovery of uranium deposits in Feb., 1947. Coal imports in 1951 amounted to 2,167,600 metric tons.

**FORESTS.** The Gran Chaco area is the world's chief source of quebracho extract. Total exports of this tanning agent obtained from quebracho logs in 1951 were 258,000 metric tons, part of which was re-exported from Paraguay. Other forest products—hardwoods, dyewoods, lignum vitae, red quebracho, medicinal gums and other tannins—are consumed locally for the most part.

## Austria (Republic)

### (Österreich)

Area: 32,388 square miles.

Population (census June 1, 1951): 6,918,959 (practically all Austrian).

Density per square mile: 213.6.

Allied Council: L. E. Thompson, Jr. (U. S. A.); Ivan I. Ilyichev (U.S.S.R.); Sir Harold A. Caccia (United Kingdom); Jean Payart (France).

President: Dr. Theodor Koerner.

Chancellor: Julius Raab.

Principal cities (census 1951): Vienna, 1,760,784 (capital, industrial center); Graz, 226,271 (industrial center); Linz, 185,177 (Danube port); Salzburg, 100,096 (tourist center).

Monetary unit: Schilling.

Language: German.

Religions (est.): Roman Catholic, 93.68%; Protestant, 3.11%; Jewish, 2.93%; unknown, .28%.

**HISTORY.** Austria, lying at the western edge of the "iron curtain" in central Europe, continued to be occupied by foreign troops after World War II.

The history of Austria before World War I was largely that of the Austro-Hungarian Empire and the Hapsburg dynasty. Its origin was in the province of Ostmark, separated from Bavaria and given to Leopold of Babenberg (A.D. 976) by the Holy

Roman Emperor, Otto II. It was ruled by the Babenbergs until 1246, and later passed to Ottakar of Bohemia, who lost it to Rudolf of Hapsburg (1276). In 1437, the three kingdoms of Austria, Hungary and Bohemia were united under the rule of Albert V. For three centuries thereafter, despite almost constant warfare, the states remained for the most part under a single crown. The Hapsburgs gradually added to their possessions, until Charles V, during the 16th century, ruled a vast part of Europe. Emperor Francis I laid down the Holy Roman crown in 1806 at the height of the Napoleonic Wars, in which Austria with her allies was finally victorious. Influence in Germany was lost through defeat by Prussia in the Seven Weeks' War (1866). In 1867, the Dual Monarchy of Austria and Hungary was established, united in the person of the sovereign, Franz Josef I, who ruled until 1916.

Following the defeat of the Central Powers in World War I, the republic of Austria was established in Nov., 1918. It was confined to its present borders by the Treaties of St. Germain (1919) and Trianon (1920). The years immediately following the war were a period of privation, dissension and riots, with Austrian currency becoming worthless and the nation bankrupt. Establishment of a semi-dictatorship by Engelbert Dollfuss, who had become Chancellor in 1932, was followed by an unsuccessful Socialist revolt (Feb., 1934) and an attempted Nazi coup d'état which failed, although Dollfuss was killed. He was succeeded by Kurt von Schuschnigg, whose futile efforts to maintain Austria's independence ended (March 12, 1938) with the bloodless occupation of Austria by German troops. Hitler proclaimed the *Anschluss* of Germany and Austria the next day.

Following the liberation of Vienna by the Red Army (April 13, 1945), Dr. Karl Renner, veteran Socialist, formed a provisional government. Elections held Nov. 25, 1945, resulted in victory for the People's Party, whose leader, Leopold Figl, became chancellor. Dr. Renner was elected president of the Second Austrian Republic (Dec. 20, 1945). He died Dec. 31, 1950; Dr. Theodor Koerner, also a Socialist, was elected President May 27, 1951. Following the Feb. 1953 elections, Julius Raab of the People's Party formed a new coalition cabinet on Apr. 2.

In the years following World War II, there seemed little prospect that Austria would soon regain her independence, since the Big Four could not agree on fundamental issues of reparations and territorial settlement.

**ALLIED MILITARY GOVERNMENT.** Since World War II, Austria within its 1937 frontiers has been divided into four sectors.

zones, as is the city of Vienna. The Allied Council and the inter-Allied governing authority of Vienna consist of the ranking officers of the four participating nations—the U. S., Britain, France and the U.S.S.R. Under an agreement signed by the four powers June 28, 1946, the Council's functions are supervisory rather than administrative.

**NATIONAL GOVERNMENT.** Austria is a federal republic comprised of nine provinces (including Vienna), each of which has its own elected assembly for the control of regional affairs. The federal parliament consists of two houses—the *Bundesrat* whose 50 members are chosen by the provincial assemblies and the *Nationalrat* whose 165 members are chosen by national election. The president of the republic is elected by national popular vote for a term of six years. The government is administered by the chancellor and his cabinet. Party standing in the *Nationalrat* after the elections of Feb. 22, 1953, was as follows: People's Party 74, Socialist 73, Independent 14, Communist 4.

**SOCIAL AND ECONOMIC CONDITIONS.** In 1950-51 Austria had 5,158 primary schools with 866,543 pupils, 259 secondary, technical and teachers' training schools with 76,705 pupils, and 4 universities with 14,690 students.

Agriculture employs more than one-third of the population but the country is heavily dependent on imported food-stuffs. About 90 per cent of the total area is classified as productive; of this area, about 40 per cent is intensively cultivated as plowland, meadowland, gardens and vineyards. The amount under plow is relatively small, and mixed farming predominates. Rye and wheat are the leading cereals with 1952 production amounting to 339,600 and 401,200 metric tons, respectively, followed by oats (340,500 tons) and barley (251,400 tons). Potato production was 2,567,400 tons. Other crops include sugar beets, flax, fruits and tobacco.

Stock raising and dairy farming both in the Alpine pastures and the lowlands of the east are of importance. In 1952 there were 2,346,835 cattle, 2,701,150 hogs and 319,212 sheep.

Austria is primarily an industrial country, having, in 1948, 328,729 industrial establishments with 2,046,000 workers (1951). The metallurgical, engineering, textile and wood industries are most important. Styria is responsible for almost all the iron and steel production, which included in 1952 1,057,723 metric tons of steel and 1,172,667 tons of pig iron.

Legislation providing for the nationalization of 70 firms, comprising a substantial portion of Austrian basic industry,

was enacted late in 1946. Most of the industrially important regions are in the Soviet zone.

The constantly unfavorable prewar trade balance was offset in part by international loans and in part by invisible exports, such as tourist expenditures, income from foreign investments and transit trade.

Trade statistics are as follows (in millions of schillings):

	1950	1951	1952
Exports	6,513	9,635	10,797
Imports:			
Commercial	7,089	8,541	12,002
ERP	2,110	2,743	1,957

Principal sources of imports in 1952 were western Germany (22%), the U. S. (18%), Britain (9.6%) and Italy (6.1%). Chief customers were western Germany (20%), Italy (13%), Britain (7.0%) and France (5.5%). The leading exports were timber (18%), pig iron (7.2%), paper and pulp (6.3%) and metal goods (5.7%).

The construction of railways and roads has been hampered by physical difficulties. There were 3,761 miles of railway in 1951, partly electrified. Water traffic is restricted for the most part to the Danube River. The major river ports are Linz and, especially, Vienna, which is also an important rail, road and air center.

Government revenue was estimated at 18,967,000,000 schillings in 1953 and expenditure at 19,501,000,000 schillings.

**NATURAL FEATURES AND RESOURCES; CLIMATE.** Austria covers an area about equal to that of Scotland and includes much of the mountainous territory of the eastern Alps (about 92.3 per cent of the country is classified as mountainous). From the Rhine Valley, Austria's western frontier, these ranges cross the country from west to east, merging on the north and northeast into the Danube Valley and the open Vienna basin. On the east and southeast, the ranges merge into the forested foothills overlooking the undulating countryland of western Hungary. The country contains many snowfields, glaciers and snow-capped peaks. The principal river, the Danube, enters in the northwest and crosses northern Austria.

Austria possesses valuable mineral resources. In Styria lies one of the largest European deposits of iron ore. Copper is mined in Salzburg, Tyrol and lower Austria, and lead and zinc in Carinthia. Other minerals include bauxite, graphite, sulfur and manganese. Fuel resources comprise small coal deposits in lower Austria and large quantities of lignite, found everywhere except in Salzburg. Large supplies of coal and coke must be imported, but extensive water power resources are available for exploitation. Petroleum fields in the Zistersdorf and Mühlberg areas, both in the Soviet zone, produced an

estimated 20,800,000 barrels in 1952. Production of lignite in 1952 was 5,160,964 metric tons; coal, 190,353 tons.

Variety is the keynote of Austria's climate. The mean annual temperature in the north ranges between 45° and 48°, and in no month does the average exceed 68°. Most of the rainfall occurs during summer. In the Tyrol, mild winters and warm summers (with temperatures often higher than 68°) are customary; maximum precipitation is in spring and summer. The mean annual temperature of Vienna is 49.4°, and the range about 40°.

## Belgium (Kingdom)

(Royaume de Belgique—  
Koninkrijk België)

Area: 11,783 square miles.\*

Population (est. Dec. 31, 1952): 8,757,691 (Walloon, Flemish).

Density per square mile: 743.3.

Sovereign: Baudouin I.

Premier: Jean Van Houtte.

Principal cities (est. 1952, including certain suburbs): Brussels (Bruxelles), 968,139 (capital); Antwerp (Anvers), 478,917 (port and commercial center); Liège, 252,445 (iron and steel); Ghent (Gand), 218,298 (textiles).

Monetary unit: Belgian franc.

Languages: French, Flemish.

Religion: Predominantly Roman Catholic.

\* Including small areas taken over from Germany in 1949.

**HISTORY.** In 1914 and again in 1940, Belgium was crushed by German armies because its position in the Low Country area made it a highway on the invasion route to France. Highly industrial, a bit larger than Maryland and second most densely populated major European nation, Belgium emerged from World War II in fair economic condition but, politically, the country suffered crisis after crisis in the struggle between conservatives and elements of the left, especially over the return of King Leopold III to the throne. Leopold returned to Belgium on July 22, 1950, but violent Socialist-led rioting forced him to agree to turn over his powers to his son, Baudouin. He formally abdicated July 16, 1951, and his son became king as Baudouin I.

Perhaps the earliest mention of the Belgians in history was in 57-50 B.C., when they were conquered by Julius Caesar. In the Middle Ages the Belgian towns became wealthy and virtually autonomous as great textile centers. Belgium became part of Burgundy in 1385 and, later, part of the Spanish domains of Charles V. By the Treaty of Utrecht, in 1713, Belgium went to Austria, though retaining its autonomy, and from 1792 to 1815 it held a similar status under France. United with the Kingdom of the Netherlands by the Con-

gress of Vienna in 1815, the Belgians revolted and proclaimed independence on Oct. 4, 1830, choosing as their sovereign Leopold of Saxe-Coburg. Taking the title of King Leopold I, he ruled 1831-65.

Belgium progressed peaceably under Leopold I and his son, Leopold II, who reigned from 1865 to 1909, and was succeeded by his nephew, Albert I (1909-34).

Despite heroic Belgian resistance under the personal leadership of Albert, the country was overrun by the Germans in 1914 and occupied throughout World War I. The treaty of 1919 gave Belgium the regions of Moresnet, Eupen and Malmédy, and a mandate over Ruanda-Urundi in Africa.

As World War II approached, Belgium strove to protect its legal neutrality; at the same time the nation rearmed rapidly and built a strong series of fortifications, especially along the Albert Canal. But these defenses were no great obstacle to the Germans, who invaded the country for the second time in a generation on May 10, 1940.

King Leopold III, who had succeeded his father upon the latter's death in a mountain-climbing accident in 1934, ordered the Belgians to surrender to the Nazis and was taken prisoner on May 28, 1940—eighteen days after the first German attack. The cabinet of Hubert Pierlot escaped from the country and set up a government-in-exile in London. When that government returned to Belgium on Sept. 7, 1944, King Leopold's brother, Prince Charles, was elected regent (Leopold was still a prisoner). Pierlot, a Catholic, became head of a coalition government. He was succeeded in Feb., 1945, by Achille van Acker (Soc.).

The Christian Socialists (Catholics) won a plurality in the elections of Feb. 17, 1946. Their pro-Leopold stand prevented them from taking office, however, and the country was ruled by the Liberal-Socialist-Communist cabinets of Van Acker (Mar. 31, 1946) and Camille Huysmans (Aug. 2, 1946) until March, 1947, when Socialist Paul-Henri Spaak formed a Socialist-Christian Socialist coalition cabinet. He was succeeded by Gaston Eyskens, a Christian Socialist, who succeeded in forming a Christian Socialist-Liberal cabinet on Aug. 10, 1949, to end the political stalemate which followed the elections of June 26, 1949. He and his cabinet resigned on Mar. 19, 1950, following a national referendum on Mar. 12 in which 57.7 per cent of the electorate voted for Leopold's return. In elections held June 4, 1950, the Christian Socialists won control of the Chamber of Deputies; succeeding Christian Socialist cabinets were headed by Jean Duvieusart (June 8), Joseph Pholien (Aug. 15) and Jean Van Houtte (Jan. 15, 1952).

On March 17, 1948, Belgium signed a

50-year defense treaty with Britain, France, Luxembourg and the Netherlands, and in April, 1949, the nation joined the North Atlantic alliance.

Baudouin I was born Sept. 7, 1930, the elder son of Leopold III and Queen Astrid, who was killed in an automobile accident in 1935. The King's brother and the heir presumptive is Prince Albert, born June 6, 1934; his sister is Princess Josephine, born Oct. 11, 1927, married April 9, 1953, to Prince Jean of Luxembourg.

**GOVERNMENT.** Under the 1831 constitution, Belgium is a constitutional, hereditary monarchy. The king's authority is delegated to the ministers whom he appoints and dismisses to conform with the parliamentary majority. The ministers who constitute the cabinet must have the confidence of parliament, which consists of a 212-member chamber of deputies popularly elected, and a senate of varying membership, elected both directly and indirectly. All members serve for four years unless one or both houses are dissolved by the king, in which case new elections must be held in forty days. Belgium's nine provinces and 2,670 communes have crown-appointed officials but retain considerable autonomy with locally-elected councils.

The election of June 4, 1950, returned 108 Christian Socialists (as against 105 in the June, 1949, election), 77 Socialists (66), 20 Liberals (29) and 7 Communists (12) to the Chamber of Deputies.

The authorized strength of the army in 1951 was 150,000, but the term of compulsory service was reduced in 1952. The air force has about 350 combat planes. The navy, abolished in 1928, was reformed after World War II and in 1952 had 2 sloops, 1 frigate and minor craft.

**EDUCATION.** Education, free and universal for children from six to fourteen, is under state control in three divisions: primary, intermediate and higher. Primary schools (Dec. 1950) numbered 8,732 with 769,968 pupils; state secondary schools, lower grade, 278 with 50,318 pupils, higher grade, 120 with 57,095 pupils. There are four universities: official, Ghent and Liège; unofficial (private), Brussels and Louvain with a total of 16,425 students in 1950. There are also private schools, many under religious auspices.

**AGRICULTURE.** About 60 per cent of the total area is under cultivation, and one-half the farmed area is devoted to forage crops. Principal crops in 1952, in metric tons, were wheat, 551,715; oats, 454,641; barley, 268,655; rye, 205,993; sugar beets, 1,670,514; and potatoes, 1,729,274. Other crops are fodder beets, flax and fruit. The pastoral industry, especially dairy farming, flourishes. On Jan. 1, 1953, Belgium had 2,151,312 cattle, 1,382,133 hogs and 113,744 sheep.

**MANUFACTURING.** Belgium is one of the most highly industrialized nations in Europe, largely because of vast, readily accessible coal reserves. Industry has not advanced, however, at the expense of agriculture; the Belgian economy is based on both. In Jan., 1948, there were 248,128 industrial establishments with 1,000,010 workers. Steel production totaled 4,995,414 metric tons in 1952; pig iron, 4,774,209 tons.

The metallurgical, textile and building industries are important. Associated with iron and steel is a considerable engineering industry, shipbuilding in Antwerp, and machinery and railway stock in Brussels. The centuries-old textile industry produces linen (Courtrai); cotton (the southeast); and synthetic fibers. Antwerp, using the output of mines in the Congo and Angola, rivals Amsterdam in diamond cutting.

Foreign trade is especially vital to the Belgian economy. The Belgian-Dutch-Luxembourg customs union (Benelux), established on Jan. 1, 1948, is one of the five great trading areas in the world. Trade of Belgium and Luxembourg (in billions of francs) is as follows:

	1950	1951	1952*
Exports	82.6	132.6	122.6
Imports	97.1	127.2	123.0

\* Provisional.

Chief customers in 1952 were the Netherlands (15%), Britain (11%), western Germany (10%), the U. S. (8%) and France (7%). Leading sources of imports were the U. S. (15%), the Netherlands (13%), western Germany (11%), France (10%). Chief exports were iron and steel and products (32%), thread and fabric (13%), nonferrous metals and products (10%) and coal, coke and petroleum and products (6%).

**COMMUNICATIONS.** Inland transportation facilities are highly developed. Railroad mileage is 3,100. Navigable waterways total 998 mi., including the well-developed canal system. Before World War II, Belgium had the second largest river fleet on the Rhine. Highway mileage in 1950 totaled 6,754, mostly improved. The merchant fleet on June 30, 1952, totaled 202 ships (100 tons and over) aggregating 489,835 gross tons, according to *Lloyd's Register*. Sabena, the government-controlled airline, flew 9,385,739 miles in 1951 and carried 231,679 passengers.

**FINANCE.** Recent data are as follows (in billions of francs):

	1950	1951*	1952*
Revenue	71.2	89.2	92.1
Expenditure	84.3	86.9	86.4

\* Provisional.

The national debt, consolidated, short and middle term and at sight, totaled 287,747,447,717 fr. on Dec. 31, 1952.

**NATURAL FEATURES AND RESOURCES;**

**CLIMATE.** The northern third of Belgium is a plain extending eastward from the coast of the North Sea. North of the Sambre-Meuse Rivers is a low plateau, varying from 250 to more than 600 feet in height, and to the south lies the Ardennes plateau, rising to a maximum of about 2,300 feet. The shallowness of the North Sea off Belgium precludes the development of good harbors; some of the port advantages of Antwerp, on the Schelde River, are offset by the fact that the approaches to it are through Dutch territory.

The principal mineral is coal; production in 1952 was 30,384,407 metric tons. The Ardennes coalfield, now nearly exhausted, extends southward into France. The Campine field, comparatively new, lies in the northeast. Iron ore, lead and zinc also are mined, principally in the Ardennes. Belgian mining, highly developed, normally employs about 200,000 people.

Forests cover about 20 per cent of Belgium, but their products are relatively unimportant. Fishing is vital in the economy. The 1951 catch was about 51,500 metric tons valued at 482,758,000 fr.

The climate is temperate. Ostend, on the sea, has an average annual temperature of 49° and annual rainfall of 27.5 inches, about like that of Chicago. Baraque Michel, in the Ardennes heights, has an average temperature of 43°, rainfall of 59.5 inches, and considerable snow in the winter.

#### Belgian Colonial Empire

Country	Area (sq. mi.)	Native pop. (est. 1951)
Belgian Congo (colony)	904,974	11,331,793
Ruanda-Urundi (U. N. trust territory)	20,120	3,794,000

#### BELGIAN CONGO—Status: Colony.

Capital: Léopoldville (population 1951: 208,662; Europeans, 10,993).

Governor General: Léo Pétillon.

Foreign trade (1952)\*: exports, 20,405,606,000 fr.; imports, 20,304,587,000 fr.; chief exports, copper (30%), cotton, coffee.

Agricultural exports (1952, in metric tons)\*: cotton, 45,677; coffee, 30,902.

Mineral production (1950, in metric tons): copper (smelter), 175,920; tin (ingots), 3,290; cassiterite, 15,205; diamonds (mainly industrial), 9,604,128 carats; gold (refined), 331,820 oz.; uranium.

Forest exports (1952, in metric tons)\*: palm oil, 146,073; palm kernels, 93,454; gum copal, 4,724; rubber, 16,807.

\* Including Ruanda-Urundi.

The mineral-rich Belgian Congo, in central Africa, with a narrow outlet to the Atlantic through the northwestern tip of Portuguese Angola, was acquired Nov. 15, 1908, by the Belgian state from the Belgian king, Leopold II. The latter had backed exploration of the area by the English explorer, R. M. Stanley, and in 1885

had been recognized by the great powers as personal sovereign and proprietor of the Congo Free State, as it was then called. The area is now administered by a governor general responsible to the cabinet minister for the colonies. The governor general has unrestricted executive and legislative powers, and the colony has no representative institutions of its own. During World War II it furnished vital war materials to the Allies. The European population on Jan. 1, 1951, was 57,930, of whom 44,028 were Belgians.

**RUANDA-URUNDI**—Status: U. N. trust territory, united administratively with the Belgian Congo.

Capital: Usumbura.

Governor General: Léo Pétillon.

Principal products: tin, coffee, gold, cotton, hides.

Ruanda-Urundi, in east Africa, was assigned to Belgium as a mandate by the League of Nations at the end of World War I, before which it was a portion of German East Africa. It is administered under the direction of the governor general of the Belgian Congo by a vice governor general. The area, placed under U. N. trusteeship in Dec., 1946, is largely mountainous, with livestock grazing the principal native activity.

### Bhutan (Kingdom)

Area: approx. 18,000 square miles.

Population (est.): 300,000 (mostly Bhotiya).

Density per square mile: 16.7.

Ruler: Maharaja Jigme Dorji Wangchuk.

Capital: Punakha.

Monetary unit: Indian rupee.

Language: Tibetan dialect.

Religion: Buddhism.

**HISTORY.** Bhutan is a semi-independent state lying on the southeast slope of the Himalayas, bordered on the north and east by Tibet and on the south and west by the Republic of India. The area is said to have been invaded and settled by Tibetan troops in the 9th century A.D. After almost a century of conflict between the Bhutanese and the British in India, British troops invaded the country in 1865 and negotiated an agreement under which Britain undertook to pay an annual allowance to Bhutan on condition of good behavior. A treaty signed with India in Aug., 1949, increased this subsidy and placed Bhutan's foreign affairs under Indian control.

Until 1907 Bhutan's government was under the dual control of the clergy and laity, but the country is now ruled by a hereditary maharaja.

The dominant people are the Bhotiyas, who are of Tibetan origin, speak a Tibetan dialect, and profess the same form of Buddhism as is prevalent in Tibet.

**ECONOMIC CONDITIONS.** The chief crops are rice, corn and millet; the fields, laid out on hillside terraces, are watered by an ingenious system of irrigation. Bhutan is famous for its small though sturdy mountain ponies. The chief industries are metal work, cloth weaving and fine basket and mat work. Trade is insignificant, and much of it is conducted by barter.

**NATURAL FEATURES.** The whole of Bhutan presents a succession of lofty and rugged mountains running generally from north to south and separated by deep valleys. Mountains in the north reach a height of 24,000 feet. The climate varies according to the topography. There are valuable forest stands ranging from semi-tropical woods on the lowest slopes to coniferous forests on the more temperate slopes to the north.

## Bolivia (Republic) (República Boliviana)

Area: 416,040 square miles.

Population (census 1950): 3,019,031 (1944: 52% Indian, 28% Mestizo, 13% white, 2% Negro, 6.8% unspecified).

Density per square mile: 7.3.

President: Víctor Paz Estenssoro.

Principal cities (census 1950): La Paz, 321,063 (de facto capital); Cochabamba, 80,795 (commercial center); Oruro, 62,975 (tin mines); Potosí, 45,758 (mining); Sucre, 40,128 (legal capital).

Monetary unit: Boliviano.

Language: Spanish.

Religion: Roman Catholic.

**HISTORY.** Famous since Spanish colonial days for its mineral wealth, modern Bolivia was once a part of the ancient Incan Empire. After the Spaniards had defeated the Incas during the first part of the 16th century, Bolivia was subjected to the Spanish Viceroyalty of Peru, and its predominantly Indian population was reduced to slavery. During the successive South American revolts against Spain in the early 19th century, Upper Peru (as Bolivia was then called) was a vast battlefield contested by Spanish and patriot troops. The country finally won its independence in 1825; the new republic was named after Simón Bolívar, South America's famed liberator.

Bolivia's political history since independence has been extremely stormy. Since 1825 it has had more than sixty revolutions, seventy presidents and eleven constitutions. No elected president has ever served out his term.

Harassed by internal strife, Bolivia lost great slices of territory to three neighbor nations. Several thousand square miles and its outlet to the Pacific were taken by Chile after a disastrous war in 1879-83. In 1903 a piece of Bolivia's Acre province, rich in rubber, was ceded to Brazil. And in

1938, after a war with Paraguay, Bolivia gave up claim to nearly 100,000 square miles of the Gran Chaco.

Recent years have been typical of Bolivia's turbulent political history, with several illegal seizures of power culminating in a leftist revolution on July 21, 1946, which overthrew the rightist regime of Lt. Col. Gualberto Villarroel. Elections held Jan. 5, 1947, were indecisive; Congress endorsed the slight plurality of Dr. Enrique Hertzog, who took office on March 10, 1947. Continued political and labor unrest and martial law marked Hertzog's administration and that of Mamerto Urriolagoitia, who became president when Hertzog resigned because of illness in Oct., 1949. Elections held May 6, 1951, were again indecisive, although an exiled leftist, Víctor Paz Estenssoro, obtained a near majority. A military junta which took over on May 16, 1951, was overthrown on April 11, 1952, and Paz Estenssoro became president on April 16. The three major tin mining companies were nationalized in Oct. 1952.

**GOVERNMENT.** Under the 1938 constitution, Bolivia is a republic, electing by popular vote a president every four years, a 27-member Senate every six years, and a 111-member Chamber of Deputies every four years. The president appoints the 10 members of his cabinet. The Indian majority was virtually disfranchised until July 1952, when the franchise was conferred on all those who had reached the age of 20, whether literate or illiterate.

Military service is compulsory, with a two-year training period beginning at nineteen and service on reserve until fifty. The army is fixed by law at 15,000, and there are about 12,000 federal police. The air force is being re-organized and trained by U. S. officers.

**SOCIAL AND ECONOMIC CONDITIONS.** Bolivia has an illiteracy rate estimated in 1948 at over 80 per cent, highest in Latin America. A contributing factor is the high proportion of pure Indian population. In 1950, enrollment at 1,562 primary schools was 141,831, and at 104 secondary schools, 18,029. There are five universities and several normal schools and educational centers for Indians. The government is reorganizing the curriculum for rural schools.

Mining is the backbone of the economy. Tin, accounting normally for 70 per cent of Bolivian exports, is by far the most important mineral, most of it coming from the plateau regions of Potosí and Oruro. During World War II, Bolivia was the world's largest tin producer.

Mineral production in 1951 was as follows: tin, 33,130 long tons; silver, 7,172,000 ounces; copper, 4,800 metric tons; zinc, 30,500 metric tons. Antimony, gold, lead,

manganese ore, tungsten concentrates, and mercury are also produced; and uranium deposits have been reported. Southern Bolivia is rich in oil, as yet relatively unexploited. Production in 1952 amounted to about 528,000 barrels.

The 5,000,000 acres under cultivation produce wheat, rice, sugar, potatoes, cacao, barley, maize, coca (source of cocaine), tobacco and cotton. Production of such basic foodstuffs as wheat and rice, however, is insufficient for domestic needs, and considerable quantities must be imported. Cattle are raised in the more temperate regions of the east and south, sheep in the departments of La Paz and Cochabamba, and llamas, alpacas and vicuñas, important sources of hides, wool and meat, are raised on the plateaus by Indians whose economy is largely dependent upon them. The fur-bearing chinchilla, a native of the colder plateau regions, is also bred.

Manufacturing received considerable impetus during the Chaco War, but the output is insufficient to supply the domestic demand. Almost three-fourths of the manufacturing is carried on in La Paz.

Tin and other minerals comprise almost the whole of Bolivia's exports. Since the country is landlocked, foreign trade must pass through free ports in Chile and river ports on the Amazon. Trade statistics for three years follow (in millions of U. S. dollars):

	1950*	1951*	1952*
Exports	94.0	150.9	162.7
Imports	55.8	78.9	64.3

\* Partially estimated.

Chief exports in 1950 were tin (64%) and lead (9%). The U. S. was the principal supplier (39%). Leading customers were the U. S. (52%) and Britain (41%).

From its lowland tropical forests, Bolivia gets rubber, quinine bark, almonds and brazil nuts, dyewoods, mahogany, quebracho and other hardwoods. Rubber exports in 1950 were about 2,200 short tons.

Railway mileage (1951) totaled 1,491, almost entirely in western Bolivia; the principal lines connect La Paz with the Chilean ports of Arica and Antofagasta. Improved roads totaled 2,815 mi. in 1950; there were about 20,000 mi. of other roads. Airlines play an important role in Bolivian transportation. Panagra and Braniff Airways provide international air service. In the lowlands, thousands of miles of navigable streams are the chief means of transportation.

The 1952 budget estimated expenditure at 5,100,000,000 bolivianos and revenue at 5,000,000,000 bolivianos. On Aug. 31, 1951, the public debt was 12,233,000,000 bolivianos, including arrears of interest.

**NATURAL FEATURES AND CLIMATE.** Landlocked Bolivia is a low alluvial plain

throughout 60 per cent of its area toward the east, drained by the Amazon and Plata river systems. The western part, enclosed by two chains of the Andes, is a great plateau—the Altiplano—measuring 500 by 80 miles at an average altitude of 12,000 feet. More than 80 per cent of the population lives on the plateau, which also contains La Paz, the highest capital city in the world. Lake Titicaca, half the size of Lake Ontario, is one of the highest large lakes in the world, at an altitude of 12,507 feet. Islands in the lake hold ruins of the ancient Incan civilization.

The climate varies from the humid heat of the equatorial lowlands in the east to the arctic cold of the Andean peaks. In the lowlands, the average temperature is about 77°, with no great departures; rainfall is heavy throughout the year. At higher elevations in the west (to 11,000 ft.) the climate is temperate, with occasional winter frost. In the great central plateau, the weather is always cool. In La Paz it averages about 50.4°.

## Brazil (Republic)

(Estados Unidos do Brasil)

Area: 3,291,416 square miles.

Population (est. 1952): 54,660,000 (1945: white, 63%; Mestizo, 21%; Negro, 14%; Indian and other, 2%).

Density per square mile: 16.6.

President: Getúlio D. Vargas.

Principal cities (census 1950\*): Rio de Janeiro, 2,413,152 (capital and chief port); São Paulo, 2,227,512 (coffee); Recife (Pernambuco), 534,468 (seaport); Salvador (Baía), 424,142 (seaport); Porto Alegre, 401,213 (seaport); Belo Horizonte, 360,313 (mining); Fortaleza (Ceará), 280,084 (seaport).

Monetary unit: Cruzeiro.

Language: Portuguese.

Religion: Roman Catholic, 95%.

\* Provisional figures.

**HISTORY.** Brazil, the only Latin American nation deriving its culture and language from Portugal, is by far the largest country in South America, covering nearly half the continent. In the Western Hemisphere it is second to Canada. In the world, it ranks after the U.S.S.R., China and Canada.

Brazil was discovered in 1500 by the Portuguese admiral, Pedro Alvares Cabral. Portuguese colonization efforts began in 1532 and Brazil became a royal colony seventeen years later. The later attempts of France and Holland to colonize Brazil were defeated by the Portuguese.

During the Napoleonic wars, the prince regent of Portugal (later King John VI) fled his country in advance of the French armies, and set up his royal court at Rio de Janeiro in 1808. John was drawn home by a revolution in 1820 and the Brazil-

ians, after holding the seat of Portuguese government, rebelled at resuming colonial status and declared their independence in 1822 under Pedro, son of John VI. Harassed by trouble with his parliament, Pedro I abdicated in 1831 in favor of his five-year-old son, who became emperor in 1840 as Pedro II. He was a popular monarch.

Despite his good works, however, Pedro II was forced to abdicate in 1889 following a military revolt, after which a republic was set up. Until 1893 Brazil was under two military dictators, Marshal Deodoro da Fonseca and Marshal Floriano Peixoto. After a revolt against the latter in 1893, Brazil returned gradually to stability under a succession of five civilian presidents—Prudente de Moraes Barros, 1894-98; Manuel Ferraz de Campos Salles, 1898-1902; Francisco de Paula Rodrigues Alves, 1902-06; Afonso Penna, 1906-09, who died in office; and Nilo Pecanha, 1909-10.

The president during World War I, Wenceslau Braz, co-operated with the Allies and declared war on Germany Oct. 26, 1917. Reckless expenditure marked the term of the next chief executive, Epitácio da Silva Pessoa, 1919-22, while the presidency of Arthur Bernardes, 1922-26, was bedeviled by financial difficulties and army dissension. His successor, Washington Luiz Pereira da Souza, 1926-30, had to cope with the world depression and was overthrown by a revolutionary group under Getúlio Vargas, who took over as provisional president.

Vargas' new constitution in 1934 sharply curtailed state's rights and emphasized a nationalistic policy. In 1937 Vargas seized absolute power, setting up another constitution which extended his term of office indefinitely. In World War II, Brazil co-operated well with the United Nations. Allied air bases were set up in Brazil, Brazilian naval forces patrolled the South Atlantic, and a Brazilian expeditionary force fought in Italy after the nation's declaration of war against the Axis in Aug., 1942.

National fear that Vargas would never fulfill his promise of free elections led to his overthrow on Oct. 29, 1945, and the transfer of his powers to Chief Justice José Linhares. In the subsequent elections, on Dec. 2, 1945, victory went to the Vargas candidate—Gen. Eurico Gaspar Dutra, inaugurated as president on Jan. 31, 1946.

Vargas returned to the political arena in 1950 and was elected president Oct. 3 as candidate of the left-of-center Labor party. He took office Jan. 31, 1951.

**GOVERNMENT.** Under the Constitution of Sept. 18, 1946, Brazil is a federation of twenty states, five territories and one federal district. The president is popularly elected for a five-year term and may not succeed himself. The national Congress is composed of two houses—the Senate,

whose members serve for eight-year terms, and the Chamber of Deputies, elected for four-year terms. Members of Congress are elected by equal, direct, compulsory and secret suffrage under a system of proportional representation.

Among the important innovations of the 1946 Constitution are articles empowering the federal government to create state-owned monopolies in the public interest and making the exploitation of mines and subsoil resources dependent on federal authorization. The Constitution also authorizes the government to intervene in labor disputes but recognizes the general principle of freedom of association and the right to strike. Labor courts handle labor-management disputes.

The twenty states, with popularly elected legislatures and governors, and their own constitutions, have considerable autonomy, but, during the first Vargas regime, suffered from federal intervention. **DEFENSE.** Military service is compulsory beginning at twenty-one, with an initial training period of one year and service on reserve until forty-five. The permanent army of 112,300 men and 258,000 reserves in 1940 was greatly expanded in World War II. Its strength in 1948 was estimated at 118,000, including 38,000 federal police.

The army received a considerable amount of U. S. lend-lease military goods during World War II. The air force, under a separate Ministry of Aviation since 1941, expanded during the war and took an active part in the Italian campaign.

The navy on Jan. 1, 1953, had in active service one old battleship, 2 cruisers, 9 fleet destroyers, 8 escort destroyers, 3 submarines and smaller craft.

**EDUCATION.** Education is free and compulsory; under the 1946 constitution it is given in Portuguese only. According to the 1940 census, 43.6 per cent of the population 18 years of age and over could read and write. In 1950 there were 60,000 primary schools with 4,500,000 pupils, about 1,500 secondary schools with 300,000 students and about 2,700 vocational, commercial and professional schools with 200,000 students. There are 11 universities, of which 3 are private (Catholic), 7 state and one federal (University of Brazil at Rio de Janeiro).

**AGRICULTURE.** Agriculture is the basis of Brazil's economy, but only 4 per cent of its area is under cultivation, the rest being grazing, forest, or non-productive land. Brazil leads the world in production of coffee and castor beans, and ranks second in cacao. Production and export of both coffee and cacao are government-controlled. The most important agricultural products in 1951-52 were coffee, 18,003,000 bags of 132 lb. each; cacao, 104,725 metric tons; rice, 2,770,000 tons; wheat, 495,000

tons; refined sugar (1951), 1,903,000 tons; bananas (1951), 167,189,000 bunches. Other crops include tobacco, maize, fruit, cotton and coconuts. Total value of agricultural production in 1950 was about 51,177,150,000 cruzeiros.

Livestock is raised nearly everywhere, with the great centers in the central and southern states. In 1951 there were 46,400,000 cattle, and in 1950 23,900,000 hogs. **MANUFACTURING.** Manufacturing is still primarily for domestic consumption, but industrialization is progressing rapidly.

The state of São Paulo is by far the leading industrial area. Leading products are foodstuffs, textiles, chemicals and pharmaceutical products, metallurgical products, clothing, leather, glass and porcelain, paper and rubber articles.

Brazil's first steel plant, at Volta Redonda, began production on June 23, 1946. Production of pig iron and ferro-alloys in 1951 was 772,023 metric tons and steel, 841,780 tons.

Foreign trade, largely hemispheric, has been retarded by scarcity of dollar exchange. Trade statistics for 3 years follow (in billions of cruzeiros):

	1950	1951	1952
Exports	24.91	32.51	26.07
Imports	20.31	37.20	37.18

In 1952, Brazil's chief customers were the U. S. (52%), Argentina (7%), France (6%) and Germany (8%). Leading suppliers were the U. S. (42%), Britain (9%) and Argentina (9%). Chief exports were coffee (74%), cacao (3%) and cotton (2%).

Major imports include machinery, foodstuffs (largely Argentine wheat), vehicles and petroleum products.

**MINERAL RESOURCES.** Brazil's vast mineral resources are among her least developed assets. The most important are coal (estimated reserves of 5,000,000,000 tons; estimated 1951 production, 1,944,000 metric tons) and iron ore, found chiefly in Minas Gerais (1951 output, 2,555,000 metric tons). Other important minerals, with estimated 1951 production are gold, 200,000 troy ounces; diamonds, 200,000 carats; (1950) bauxite, 17,000 metric tons; manganese ore, 148,300 metric tons; tungsten; silver; quartz crystals; uranium; chrome ore; graphite; petroleum and titanium.

**FORESTS AND FISHERIES.** More than half of Brazil's area is forested, but the extensive resources are relatively undeveloped. The largest single forest commodities are timber, chiefly pine from the southern states, and the wax of the carnauba palm, used for insulation and phonograph records and produced commercially only in Brazil (exports 1951: 9,579 metric tons). Rubber production, mostly in the Amazon basin, was estimated in 1952 at 26,650 metric tons, but it has not developed as

extensively as was once expected. Other forest products are Brazil nuts, yerba maté (Paraguay tea), medicinal plants, and vegetable oils. There are vast fishing banks and grounds in the rivers and along the coast, with some 2,500 species of fish.

**COMMUNICATIONS.** Coastwise and river steamers are the main links between north and south Brazil, especially within the Amazon basin where inland waterways are the only means of land communication. Navigable waterways total 26,713 miles. Coastwise traffic is restricted to Brazilian ships, but the Amazon is open to all ships. According to *Lloyd's Register*, the merchant marine had 374 vessels (100 tons and over) aggregating 794,011 gross tons on June 30, 1952.

Railway mileage in 1951 was about 23,000, mostly located south of Recife. Railway development has been hampered by natural obstacles, especially by coastal mountains, but extensive government and private building is under way. Highways total 38,000 miles, and common roads about 124,000 miles. Brazil is served by numerous domestic and foreign airlines; mileage flown by domestic lines in 1950 was 42,500,000.

**FINANCE.** Recent data are as follows (in billions of cruzeiros):

	1951	1952*	1953†
Revenue	27.100	25.537	30.509
Expenditure	24.300	25.431	30.482

\* Budget estimate. † Draft budget.

**TOPOGRAPHY.** Brazil covers about three-sevenths of South America, extends 2,965 miles north-south, 2,691 miles east-west, and borders every South American state except Chile and Ecuador. Its area would more than blanket that of the U. S.

There are two principal physical divisions of the Brazilian surface. The lowlands are made up of the heavily forested tropical river basin of the Amazon, the world's largest drainage area; and the less heavily forested basin of the Plata to the south. The intermediate highland is a vast plateau, 1,000 to 3,000 feet above sea level, traversed by several low mountain ranges, and extending almost from the seacoast to the Bolivian frontier and south to the plains of Rio Grande do Sul. The Central plateau comprises more than half of the country and, with the narrow coastal plain, supports 90 per cent of the population.

More than a third of Brazil is drained by the Amazon and its more than 200 tributaries. The Amazon is navigable for ocean steamers to Iquitos, Peru, 2,300 miles upstream. Southern Brazil is drained by the Plata system—the Paraguay, Uruguay and Paraná Rivers. The most important stream entirely within Brazil is the São Francisco, navigable for a thousand miles but broken near its mouth by the 260-foot

Paulo Affonso Falls, with estimated potential 1,000,000 horsepower.

**CLIMATE.** Brazil is almost wholly in the tropical zone, but such factors as altitude, prevailing winds, rainfall and distance from the sea combine to vary the climate from tropical to temperate. Manaus on the Amazon has an average temperature of 80.9° and annual rainfall of 71.65 inches. The corresponding figures for Rio de Janeiro are 72.5° and 44 inches. February is usually the warmest month in Rio de Janeiro. In much of the Amazon basin, rainfall averages 80 inches.

## United Kingdom of Great Britain and Northern Ireland

**Area:** 93,371 square miles (excluding Channel Islands and Isle of Man).

**Population (census 1951\*):** 50,211,602 (English, Scotch, Welsh, Irish).

**Density per square mile:** 537.3\*

**Ruler:** Queen Elizabeth II.

**Prime Minister:** Sir Winston Churchill.

**Principal cities (census 1951\*):** London (Greater), 8,346,000 (capital); Birmingham, 1,112,000 (iron and steel); Glasgow, 1,090,000 (seaport; shipbuilding); Liverpool, 790,000 (seaport); Manchester, 703,000 (textiles); Sheffield, 513,000 (steel, cutlery); Leeds, 505,000 (clothing); Edinburgh, 467,000 (capital, Scotland).

**Monetary unit:** Pound sterling (£).

**Languages:** English, Welsh, Gaelic.

**Religion:** Church of England (established church); Church of Wales (disestablished); Church of Scotland (established church—Presbyterian); Church of Ireland (disestablished); Roman Catholic; Methodist; Congregational; Baptist; Jewish.

\* Provisional figures.

**HISTORY.** Roman invasions of the 1st century B.C. brought Britain into contact with the continent. When the Roman legions withdrew in the 4th century A.D., Britain fell easy prey to the invading hordes of Angles, Saxons and Jutes from Scandinavia and the Low Countries. Seven large kingdoms were established, and the original Britons were forced into Wales and Scotland. It was not until the 11th century that the country finally became united under the Danish King Canute. Following the death of Edward the Confessor (1066), a dispute as to the succession arose, and William Duke of Normandy invaded England, defeating the Saxon noble, Harold II, at the Battle of Hastings (1066). The Norman conquest was accompanied by the introduction of Norman law and feudalism, changing the customs of England.

The reign of Henry II (1154-89), first of the Plantagenets, saw an increasing centralization of royal power at the expense of the nobles, but in 1215 John (1199-1216) was forced to sign the Magna Carta, which awarded the people, especially the

nobles, certain basic rights. Edward I (1272-1307) continued the conquest of Ireland, reduced Wales to subjection, and made some gains in Scotland. In 1314, however, English forces led by Edward II were ousted from Scotland after the battle of Bannockburn. The late 13th and early 14th centuries saw the development of a separate House of Commons with tax-raising powers.

Edward III's claim to the throne of France led to the Hundred Years' War (1338-1453), which ended with the loss of almost all the large English territory in France. In England the great poverty and discontent caused by the war was intensified by the Black Death, a plague which reduced the population by about one-third. The Wars of the Roses (1455-85), a struggle for the throne between the House of York and the House of Lancaster, were ended by the victory of Henry Tudor (Henry VII) at Bosworth Field (1485).

During the reign of Henry VIII (1509-47), the Church in England asserted its independence from the Roman Catholic Church. Under Edward VI and Mary, the two extremes of religious fanaticism were reached and it remained for Henry's daughter, Elizabeth I (1558-1603), to settle the Church of England on a moderate basis. In 1588 the Spanish Armada, a fleet sent out by Catholic King Philip II of Spain, was defeated by the English and destroyed during a storm. It was during Elizabeth's reign that England became a world power.

Elizabeth's heir was of the house of Stuart—James VI of Scotland—who joined the two crowns as James I (1603-25). The Stuart kings incurred large debts and were forced either to depend on Parliament for taxes or to raise money by illegal means. In 1642 war broke out between Charles I and a large portion of the Parliament; Charles was defeated and executed in 1649, and the monarchy was then abolished. The Puritan Commonwealth endured for ten years, but after the death (1658) of Oliver Cromwell, the Lord Protector, the government fell to pieces and Charles II was restored to the throne in 1660. The struggle between the King and Parliament continued, but Charles II knew when to compromise. His brother James II (1685-88) possessed none of his ability and was ousted by the Revolution of 1688 which confirmed the predominant position of Parliament. James' daughter, Mary, and her husband, William of Orange, now ruled jointly.

The reign of Queen Anne (1702-14) was marked by the Duke of Marlborough's victories over France at Blenheim, Oudenarde and Malplaquet in the War of the Spanish Succession. England and Scotland meanwhile were joined together by the Act of

Union (1707). Upon the death of Anne, the distant claims of the elector of Hanover were recognized, and he became King of England as George I.

The 18th century was a period of gradual growth and change. At home the unwillingness of the Hanoverian kings to rule resulted in the formation by the King's ministers of a cabinet, headed by a prime minister, which directed all public business. Abroad the constant wars with France resulted in expansion of the British Empire all over the globe, particularly in

North America and India. This imperial growth was checked by the revolt of the American colonies (1775-81).

The age-long struggle with France broke out again in 1793, and during the lengthy Napoleonic Wars, which ended at Waterloo (1815), England was pitted at one time against almost all of Europe.

The Victorian era, named after Queen Victoria (1837-1901), saw the growth of a democratic system of government which had begun with the Reform Bill of 1832. The two important wars in Victoria's reign

were the Crimean War against Russia (1853-56) and the Boer War (1899-1902). The latter was accompanied by enormous extension of England's sway throughout Africa.

The reign of Edward VII (1901-10) was marked by increasing uneasiness at home and abroad. Within four years after the accession of George V (1910), England entered World War I when Germany invaded Belgium. The nation was led by coalition cabinets headed first by Herbert Asquith and then (Dec., 1916) by the Welsh statesman, David Lloyd George. The years after the war were marked by labor unrest which culminated in the general strike of 1926. A Labour ministry formed early in 1924 by Ramsay MacDonald fell in October of that year. In 1929 a second Labour government was formed, but the world economic depression forced a change in 1931, and a national government was formed composed chiefly of Conservative members, although MacDonald remained prime minister until 1935. King Edward VIII succeeded to the throne in 1936 on his father's death but abdicated eleven months later (in order to marry an American, Wallis Warfield Simpson, whose second divorce was then pending) in favor of his brother, who became King George VI.

The efforts of Prime Minister Neville Chamberlain to meet by peaceful means the rising tide of Nazism in Germany failed with the German invasion of Poland (Sept. 1, 1939), which was followed by England's entry into World War II (Sept. 3, 1939). Serious Allied reverses in the spring of 1940 led to Chamberlain's resignation and the formation of another coalition war cabinet by Conservative leader Winston Churchill, who led England through most of World War II. Churchill resigned as the coalition leader shortly after V-E Day, but then formed a "caretaker" government which remained in office until after the parliamentary elections of July 5, 1945, in which the Labour party won an overwhelming victory. The government formed by Clement R. Attlee on July 26 began a moderate socialistic program.

Internationally, the Attlee government continued Britain's close co-operation with the United States through the North Atlantic Treaty and in the Korean war, at the same time solidifying its position in Western Europe in opposition to the U.S.S.R. The Labour regime, returned to office by a slight majority in the parliamentary elections of Feb. 1950, lost by a narrow margin in the Oct. 1951 elections. On Oct. 26 Winston Churchill again became prime minister at the head of a Conservative government.

George VI died Feb. 6, 1952, and was succeeded by his daughter, Elizabeth II.

#### AREA AND POPULATION OF MAJOR SUBDIVISIONS\*

Subdivision	Area, sq. mi.	Population, census 1951†
England	50,870	43,744,924
Wales	7,469	
Scotland	29,794	5,095,969
Northern Ireland	5,238	1,370,709

\* Not including Channel Islands and Isle of Man.  
† Provisional figures.

**RULER.** Queen Elizabeth II, born April 21, 1926, elder daughter of King George VI and Queen Elizabeth, succeeded to the throne on the death of her father, Feb. 6, 1952; married Nov. 20, 1947, to Prince Philip, Duke of Edinburgh, born June 10, 1921; their children are Prince Charles (heir presumptive), born Nov. 14, 1948, and Princess Anne, born Aug. 15, 1950. The Queen's sister is Princess Margaret Rose, born Aug. 21, 1930; her uncles are Prince Edward Albert, Duke of Windsor (formerly King Edward VIII), born June 23, 1894, and Prince Henry William, Duke of Gloucester, born March 31, 1900.

**NATIONAL GOVERNMENT.** The United Kingdom is a constitutional monarchy, with a queen and a Parliament which has two houses: the House of Lords with about 805 hereditary peers, 26 spiritual peers, 16 Scottish representative peers, a number of Irish representative peers (vacancies are no longer filled), and a few life peers who hold or have held high judicial office; and the House of Commons, numbering since 1950 625 members elected by practically universal suffrage. Supreme legislative power is vested in Parliament, which holds office for five years unless sooner dissolved. The executive power of the Crown is exercised by the Cabinet, headed by the prime minister. The latter, normally the head of the party commanding a majority in the House of Commons, is appointed by the sovereign, with whose consent he in turn appoints the rest of the Cabinet. All ministers must be members of one or the other house of Parliament; they are individually and collectively responsible to the Crown, the prime minister and Parliament. The Cabinet proposes bills and arranges the business of Parliament but it depends entirely on the votes of confidence in Commons. The lords cannot hold up "money" bills, but they can delay other bills for a period of at least one year.

By the Act of Union (1707) the Scottish parliament was assimilated with that of England, and Scotland is now represented in Commons by 71 members. The Secretary of State for Scotland, a member of the Cabinet, is responsible for the administration of Scottish affairs.

Parliamentary elections held in Oct. 1951 returned 321 Conservatives and associates, 294 Labour party, 6 Liberals, 2 Irish nationalists and 1 Irish Labour. Polling at

contested elections was: Conservative, 12,-660,071; Labour, 13,948,985; Liberal, 730,551; National Liberal, 1,058,048; Communist, 21,640; others, 177,329.

The members of the Cabinet (July 1953): Sir Winston Churchill (Prime Minister, First Lord of the Treasury), Anthony Eden (Secretary of State for Foreign Affairs), Marquess of Salisbury (Lord President of the Council), Harry Crookshank (Lord Privy Seal), Lord Simonds (Lord Chancellor), Earl Alexander (Minister of Defense), Sir David Maxwell Fyfe (Secretary of State for the Home Department and Welsh Affairs), Richard A. Butler (Chancellor of the Exchequer), Viscount Swinton (Secretary of State for Commonwealth Relations), Oliver Lyttelton (Secretary of State for the Colonies), Sir Walter Monckton (Minister of Labour and National Service), James Stuart (Secretary of State for Scotland), Lord Leathers (Secretary of State for Co-ordination of Transport, Fuel and Power), Harold Macmillan (Minister of Housing and Local Government), Peter Thorneycroft (President of Board of Trade), Lord Cherwell (Paymaster-General), Viscount Woolton (Chancellor of the Duchy of Lancaster).

**LOCAL GOVERNMENT.** England and Wales are divided into 62 administrative counties, including the county of London, and 83 county boroughs. The counties are administered by the justices and by popularly elected county councils. All incorporated towns are administered by a municipal corporation consisting of the mayor, aldermen and burgesses. Local government in Scotland is comparable to that in England and Wales.

**JUDICIARY.** The ultimate British court of appeal is the House of Lords; the final court of appeal for certain of the Dominions is the Judicial Committee of the Privy Council. Below the House of Lords on the civil side is the High Court of Judicature, divided into two parts, the Court of Appeal, and the High Court of Justice. On the criminal side is the Court of Criminal Appeal, which is the court of last resort barring the rare allowance of an appeal to the Lords. Actually these superior courts hear only a small fraction of the cases, and most of the trials are held in a complicated system of inferior courts, exercising original jurisdiction. The Lord Chancellor, Lord Chief Justice, Lords of Appeal in Ordinary (law members of the House of Lords), and Lord Justices of Appeal are appointed by the Prime Minister.

**DEFENSE.** Compulsory military service, introduced in May, 1939, is still in effect, and will continue until 1959 under the terms of National Service acts since passed. An act passed in 1950 makes 2 years' national service compulsory for men between 18 and 26. The armed forces are comprised

of three separate services—the Army, the Royal Navy and the Royal Air Force. The Prime Minister retains supreme responsibility for defense, but the Minister of Defense has coordinating and executive duties.

Service ministers are no longer Cabinet members but continue to be members of the Defense Committee headed by the Prime Minister with the Minister of Defense as deputy chairman; this committee is responsible to the Cabinet both for the review of current strategy and for coordinating departmental action in preparation for war.

Military-budget estimates for the fiscal year 1953-54 follow:

	Estimate	Strength*
Navy	£364,500,000	151,000
Army	£581,000,000	554,000
Air	£548,000,000	302,000

\* Maximum during period.

Control of the land forces is exercised by the Army Council, headed by the Secretary of State for War. Its members include the Chief of the Imperial General Staff, the Adjutant General and Quartermaster General.

The Royal Navy is controlled by the Board of Admiralty, headed by the First Lord of the Admiralty, who is responsible to Parliament. Other members include the First Sea Lord and Chief of Naval Staff. In Dec. 1952, the Royal Navy had in active service and in reserve 6 fleet carriers, 6 light aircraft carriers, 1 escort carrier, 5 battleships, 24 cruisers, 85 destroyers, 53 submarines, 2 coast-defense ships and 165 frigates and destroyer escorts. Six aircraft carriers, 3 cruisers and several destroyers were under construction.

Naval losses during World War II totaled 2,831 vessels, including 3 battleships, 2 battle cruisers, 5 fleet carriers, 3 auxiliary carriers, 23 cruisers, 139 destroyers and 76 submarines.

Control of the Royal Air Force is vested in an Air Council analogous to the Army Council and headed by the Secretary of State for Air. The Fleet Air Arm was transferred to the Royal Navy in 1937.

A total of 5,896,000 men served in the armed forces during World War II; there were also 640,000 in the Women's Auxiliary Forces. Units of the navy, army and air force served in Korea; in 1953 about half of the 20,000-man Commonwealth division in action there was comprised of British units.

Research and development in the field of atomic energy and weapons is the responsibility of the Ministry of Supply.

**EDUCATION.** The school system in England and Wales has undergone considerable change since enactment of the Edu-

cation Act of 1944. This measure makes primary and secondary training available for all children at public expense, with the secondary stage starting at the age of 11. The school-leaving age was raised from 14 to 15 on April 1, 1947. Statistics for the school year 1950-51 are as follows:

England and Wales: primary and secondary schools 28,134, pupils 5,823,819; special schools 634, pupils 49,054. Scotland: primary and secondary schools 3,779, pupils 779,233.

In 1951-52 the 12 English universities and 5 university colleges had 70,922 students, the University of Wales 4,662 and the 4 Scottish universities 15,602.

**AGRICULTURE.** Agriculture remains one of Britain's chief industries, employing about 1,000,000 persons. In 1952, land under cultivation in the United Kingdom amounted to 18,104,000 acres; permanent grassland totaled 13,059,000 acres.

In Scotland more than two-thirds of the land devoted to agriculture is uncultivated rough grazings, while over two-thirds of the cultivated area is arable land; in England and Wales three-fifths of the cultivated land is under permanent grass and only one-sixth of the total agricultural land is rough grazings.

#### LEADING AGRICULTURAL PRODUCTS (in thousands)

	1951		1952*	
	Acres	Long tons	Acres	Long tons
Wheat	2,131	2,316	2,030	2,307
Barley	1,908	1,939	2,281	2,334
Oats	2,857	2,616	2,882	2,772
Sugar beets	425	4,534	408	4,236
Potatoes	1,050	8,284	990	7,848

\* Provisional.

Livestock (June 30, 1952) included 10,-253,000 cattle, 21,653,000 sheep, 4,923,000 hogs and 94,664,000 poultry. Cattle occupy a predominant position in British agriculture, accounting for about 40 per cent of the total farm output. Production of cheese (1952, including farmhouse) was 58,300 long tons; butter (including farmhouse), 14,100; beef and veal, 573,300; mutton and lamb, 162,200; bacon and ham (commercial), 163,600; wool, 40,400.

**INDUSTRY.** Great Britain is second only to the United States among the industrial nations of the world. The most important manufacture is heavy goods such as machinery, tools, bridges and locomotives; industry is concentrated in the north and Midlands of England. Sheffield is the center of the steel industry, while the china industry is concentrated in the Midlands. The cotton industry is centered in Lancashire; Liverpool, Manchester, Oldham, Preston and Bolton are the main manufacturing towns. The wool industry, England's

oldest large trade, is located just east of the cotton towns, at Leeds, Bradford and Hull in Yorkshire. An important industrial region is the central Lowlands of Scotland, where woollens, silks, linens, cottons, lace, glass, paper, steel and pig iron are produced. Important shipyards are located along the coast. Vessels aggregating 1,263,-804 gross tons were launched in 1952; they represented about 30% of the world total. On Mar. 31, 1953, 241 vessels of 1,555,087 gross tons were under construction in the United Kingdom. Steel production in 1952 was 16,418,000 long tons; that of pig iron, 10,728,000 tons. The iron and steel industry passed into public ownership in 1951 but was denationalized in 1953.

Britain's last industrial census was taken in 1935, when the total value of manufactured products was \$13,907,300,-000. The principal industries, in order of value of output in that year, were as follows: food, beverages and tobacco; engineering and transportation; textiles; metals; wood and paper products; chemicals; clothing. In Apr., 1948, there were 51,050 industrial establishments having more than 10 employees; the total working population in 1952 was 23,316,000.

**TRADE.** The United Kingdom's economic prosperity is dependent on its foreign trade, and the nation made great efforts after World War II to build up its volume of exports.

#### OVERSEAS TRADE

(Value in millions of pounds sterling)

	Imports	Exports	Re-exports
1950	2,608.2	2,171.2	84.8

## DISTRIBUTION OF TRADE, 1950-52

(millions of pounds sterling; 1952, provisional)

## Chief Destinations of Exports

	1950	1951	1952
Australia	255.8	323.9	219.9
United States	113.0	136.3	143.5
South Africa	120.7	165.1	142.0
Canada	125.9	137.2	127.4
New Zealand	86.5	110.5	113.8
India	96.7	115.2	112.1

## Chief Sources of Imports

	1950	1951	1952
Canada	180.2	260.9	319.5
United States	211.4	379.8	315.7
Australia	219.7	252.1	224.9
New Zealand	133.9	164.7	165.7
Denmark	100.9	114.7	118.0
India	98.3	152.6	114.6

**COMMUNICATIONS.** The merchant marine on June 30, 1952, totaled 5,912 ships (100 tons and over) with a gross tonnage of 18,623,654—about 20% of the world total and second only to the U. S. merchant fleet. Losses during World War II totaled 2,426 vessels of 11,331,933 gross tons.

Nationalization of the railway and canal systems in Great Britain became effective Jan. 1, 1948, and they are now operated by the government's Transport Commission. Railway mileage in the United Kingdom (1950) was 20,469; in 1952, 1,006,900,000 passengers and 286,700,000 long tons of freight were carried. The total length of public highways is 183,477 miles, of which 157,089 are in England and Wales and 26,388 in Scotland. In Dec. 1952, licensed motor vehicles included 2,448,000 cars and 936,000 trucks (including farm vehicles). Radio receiving set licenses in Dec. 1952 numbered 10,967,000; television sets, 1,893,000. Telephones numbered 5,724,440 on Mar. 31, 1952, 2nd only to the U. S.

British air services throughout the world are nationalized under the Minister of Civil Aviation. Service is supplied by two public corporations—British Overseas Airways (BOAC) and British European Airways. In 1952, they flew 58,028,000 air miles and carried 1,703,000 passengers.

**FINANCE.** Recent data are as follows (in millions of pounds):

	1951-52	1952-53	1953-54*
Revenue	4,433.4	4,438.7	4,368.2
Expenditure	4,053.7	4,350.6	4,259.3

\* Budget estimate.

Notes in circulation on Apr. 1, 1953, totaled £1,508,965,011. The net deadweight debt on Mar. 31, 1953, was £26,024,000,000 (1952: £25,860,000,000; 1951: £25,921,600,000; 1950: £25,802,300,000).

## ESTIMATED REVENUE AND EXPENDITURE 1953-54

## Estimated Revenue

Income tax	£1,782,250,000
Surtax	127,000,000

Death duties	160,000,000
Stamps	52,000,000
Profits tax and excess profits tax	214,000,000

Total civil service	£2,045,288,000
Tax collection	44,236,000
Total estimated expenditure	£3,586,286,000
Surplus	108,929,000
Grand total	£4,368,215,000

**TOPOGRAPHY AND HYDROGRAPHY.** The United Kingdom, consisting of England, Wales, Scotland and Northern Ireland, is about one-third the size of Texas. England, in the southeast part of the British Isles, is separated from Scotland on the north by the granite Cheviot Hills; from them the Pennine chain of uplands extends south through the center of England, reaching its highest point in the Lake district in the northwest. To the west along the border of Wales—a land of steep hills and valleys—are the Cambrian Mountains while the Cotswolds, a range of hills in Gloucestershire, extend into the surrounding shires. The remainder of England is plain land, though not necessarily flat, with the rocky sand-topped moors in the southwest, the rolling downs in the south and southeast and the reclaimed marshes of the low-lying Fens in the east central districts. Scotland is divided into three physical regions—the Highlands, the Central Lowlands, containing two-thirds of the population, and the Southern Uplands. The western Highland coast is intersected throughout by long narrow sea-lochs or fiords. Scotland also includes the Outer and Inner Hebrides and other islands off the west coast, and the Orkney and Shetland Islands off the north coast.

Wales is generally hilly; the Snowdon range in the northern part culminates in Mt. Snowdon (3,557 ft.), highest in either England or Wales.

In addition to the numerous inlets and bays of the coast, England has a group of lakes in the northwest which includes Windermere, Coniston, Derwentwater, Ullswater and Grasmere. Important rivers flowing into the North Sea are the Thames, Humber, Tees and Tyne. In the west are the Severn and the Wye, which empty into the Bristol Channel and are navigable, as are the Mersey and Ribble. Scotland has many picturesque lakes; its most important river is the Clyde.

**CLIMATE.** Although Great Britain lies in the same approximate latitude as Labra-

dor, its climate is tempered by the westerly winds blowing off the warm Gulf Stream. The sea winds also prevent excessive summer heat. Rainfall is abundant, especially in the early fall. London's famed "pea-soup" fogs occur most frequently in November and March. It has been estimated that clouds, fogs or mists obscure the sun for approximately two-thirds of the daylight hours.

The mean annual temperature of England and Wales is about 50°; the west coast is somewhat warmer than the east. January is the coldest month (average about 40°) and July the hottest (about 61.5°). Highest July temperatures usually occur around London, where the mean is somewhat above 64°. Coldest months in the capital are December (about 38°) and January (about 39°). The mean annual rainfall in London is 23½ inches.

North of Birmingham, the summers are cool, and in Edinburgh the mean temperature in July is usually below 60°. Rainfall is less than in London.

**MINERALS.** Great Britain's most important mineral resource is coal, which was responsible to a large extent for British industrial supremacy during the late 18th and the 19th centuries. The coal mines were nationalized in 1946. Reserves have been variously estimated at from 150,000 million to 200,000 million tons. Prior to World War II, coal was exported in declining amounts to the continent, mainly to France, Sweden, Denmark and Italy. Since the war, however, exports have been negligible, and Britain has been hard put to meet her own minimum domestic requirements. Mineworkers numbered approximately 716,000 in 1952.

Most of the British iron ore is produced in England, especially in Cumberland, Lancashire and Staffordshire. Tin ore and copper are obtained almost exclusively from Cornwall, while lead comes mainly from Flint, Durham and Derbyshire. Zinc occurs mainly in North Wales, the north of England, the Isle of Man and the county of Dumfries in Scotland. The whole British supply of china clay (kaolin)—of great importance in the ceramic, papermaking, bleaching and chemical industries—comes from Cornwall. Petroleum production is negligible, but oil shale exists in large quantities.

#### MINERAL PRODUCTION, 1951 and 1952 (in thousands of long tons)

	1951	1952
Coal *	222,181†	226,400†
Iron ore	14,648†	16,234†
Superphosphates	782	...
Zinc (smelter)	70	69
Aluminum: Virgin	28	28
Secondary	71	73

\* Excluding No. Ireland. † 52 weeks. ‡ 53 weeks.

The most important potential sources of water power are in the highlands of Scotland, North Wales and Cumberland. Electricity generated in England, Scotland and Wales averaged 5,166,000,000 kwh. monthly in 1952 and 6,134,000,000 kwh. monthly in the first three months of 1953. Gas manufacture averaged 1,345,000,000 cu. m. monthly in 1952. Nationalization of the electric and gas industries became effective in 1948.

**FORESTS, FISHERIES.** Great Britain was once heavily forested, but centuries of timber cutting and clearing have denuded the country of the original forests. Woodland of all types approximates 3,000,000 acres, and barely 40 per cent of Britain's surface is covered with timber. Consequently the nation is heavily dependent on imported timber.

Great Britain's sea fishing industry is among the most important in the world. The principal kinds of fish caught are herring, cod, haddock, plaice and hake, classed as wet fish, and, among shellfish, oysters, crabs and lobsters. The most important factor in the export trade is salted herring, which ordinarily represents about 70 per cent of the total. The principal grounds frequented by British fishermen are the North Sea; off Iceland; the Faeroes; south of Ireland; west of Scotland; west of Ireland; the Irish Sea and English Channel. The catch of wet fish in 1952 was 995,245 long tons valued at £43,849,483; about 40,000 men are regularly employed in the industry.

## NORTHERN IRELAND

(Part of United Kingdom)

**Area:** 5,238 square miles.

**Population (census 1951\*):** 1,370,709.

**Density per square mile:** 261.7.

**Governor:** Lord Wakehurst.

**Prime Minister:** Viscount Brookeborough.

**Principal cities (census 1951\*):** Belfast, 443,670 (capital); Londonderry, 50,099 (clothing).

**Monetary unit:** Pound sterling.

**Language:** English, Gaelic.

**Religions (census 1947):** Roman Catholic, 33.7%; Presbyterian, 31.4%; Church of Ireland, 26.9%; others, 8.0%.

\* Provisional figures.

Northern Ireland comprises the six predominantly Protestant counties of Antrim, Armagh, Down, Fermanagh, Londonderry and Tyrone (collectively known as Ulster), which form the northern part of the island of Ireland. The area is an integral part of the United Kingdom, but under the terms of the Government of Ireland Act (1920) it has a semi-autonomous government, which has steadfastly refused to reconsider a decision made in 1922 not to associate itself in any sort of union with the rest of

Ireland. This policy was endorsed overwhelmingly by voters in the 1949 elections.

The government has only limited powers for local purposes, and many matters are reserved to the central government at Westminster. Executive authority is vested in the Crown-appointed governor who is advised by a cabinet of eight ministers headed by the prime minister. The parliament consists of the House of Commons of 52 members elected for 5-year terms, and the Senate of 26 members elected by the House of Commons. The general elections of Feb. 10, 1949, returned 37 Unionists, 9 Nationalists, and 6 representatives of other groups to the House. The area is also represented by 12 members in the British Parliament at London.

Agriculture is the largest single industry; about two-thirds of the country is devoted to crops and pasture under a system of mixed farming. The leading crops include potatoes, oats and flax. In 1952 there were 940,000 cattle, 795,000 sheep and 676,000 hogs.

The two principal manufacturing industries are linen and shipbuilding, both centered in Belfast. The linen industry was established by Huguenot weavers who fled France after the revocation of the Edict of Nantes in 1685.

On March 31, 1953, 20 ships of 226,330 tons were under construction at Belfast.

Revenue for the fiscal year 1952-53 was estimated at £75,715,000 and expenditure at £75,651,000, of which £20,000,000 represented Northern Ireland's "contribution" to the British treasury. Most of the taxes are collected by the United Kingdom government.

In 1950-51 there were 1,629 primary schools (up to 11 years) in Northern Ireland, with enrollment of 192,736, and 80 secondary schools, with enrollment of 29,536. Students at the Queen's University (Belfast) numbered 2,618.

The topography of Northern Ireland is somewhat similar to that of the rest of the island, with two ranges (Donegal and Sperrin) and an extensive plateau (Antrim) in the northeastern part. Mineral resources are limited to deposits of basalt, clay, sandstone and granite. Fishing is an important industry, off the coast and in the numerous lakes and rivers which abound in salmon, eels and trout. Lough Neagh, covering about 153 square miles, is the largest lake in the British Isles.

The climate is comparable to that of the rest of the United Kingdom, although somewhat more equable. The highest mean summer temperature is about 59° in July, and the mean winter temperature rarely falls below 40°. Most of the comparatively light rainfall occurs in the autumn.

## ISLE OF MAN

Lieutenant Governor: Sir Ambrose Dundas.

Located in the Irish Sea, equidistant from Scotland, Ireland and England, the Isle of Man is administered according to its own laws by a government composed of the lieutenant governor (appointed by the Crown), a legislative council of 11 members, and a House of Keys of 24 elected members, one of the most ancient legislative assemblies in the world. All sitting together constitute the court of Tynwald, which controls revenue and has executive power. Acts of the British Parliament do not affect the island unless it is specifically named.

Agriculture and fishing are the principal industries. The island is a popular English summer resort.

## CHANNEL ISLANDS

Lieutenant Governor of Jersey: Adm. Sir Randolph Nicholson.

Lieutenant Governor of Guernsey: Air Marshal Sir Thomas Elmhrst.

This group of islands, lying in the English Channel off the northwest coast of France, is the only portion of the Duchy of Normandy belonging to the English Crown, to which it has been attached since the conquest of 1066. It was the only British possession occupied by Germany during World War II.

For purposes of government the islands are divided into Jersey (45 sq. mi.) and the bailiwick of Guernsey (24 sq. mi.), including Alderney (3 sq. mi.), Sark (2 sq. mi.), Herm and Jethou. The islands are administered according to their own laws and customs by local governments headed by Crown-appointed lieutenant governors. Acts of Parliament in London are not binding on the islands unless they are specifically mentioned.

The two main sources of income for the population are agriculture, especially stock-raising, and the tourist trade. French is still the official language, although English is the main language of commerce.

**GIBRALTAR**—Status: Colony.  
Governor: Lt. Gen. Sir Gordon MacMillan.

Gibraltar, at the south end of the Iberian Peninsula, is a rocky promontory commanding the western entrance to the Mediterranean. Aside from its strategic importance, it is also a free port, naval base and coaling station. It was captured by the Arabs crossing from Africa into Spain in A.D. 711. In the 15th century it passed to the Moorish ruler of Granada and later became Spanish. It was captured by an Anglo-Dutch force in 1704 during the War of the Spanish Succession and passed to Britain by the Treaty of Utrecht

in 1713. Most of the inhabitants are of Spanish, Italian and Maltese descent. There are no important industries. Gibraltar's climate is equable, with summer temperatures averaging about 84° maximum. Mean annual temperature is 64.4°.

**MALTA**—Status: Self-governing colony.  
Capital: Valletta (population 23,316).  
Governor: Sir Gerald Creasy.  
Prime Minister: G. Borg Olivier.  
Foreign trade (1952): exports (including re-exports), £1,914,164; imports, £20,320,134. Chief exports: potatoes, onions.  
Agricultural products: potatoes, onions, cereals, fruits.

The Maltese islands lie between Europe and Africa, in the central channel linking the eastern and western Mediterranean. The inhabited islands are Malta (95 sq. mi.), Gozo (26 sq. mi.) and Comino (1 sq. mi.). The Knights of St. John (Malta), who obtained the islands from Charles V in 1530, reached their highest fame when they withstood an attack by superior Turkish forces in 1565. Napoleon seized Malta in 1798, but the French forces were ousted by British troops in 1799, and British rule was confirmed by the Treaty of Paris (1814). The principal importance of Malta is its strategic location as a naval base; it was heavily attacked by German and Italian aircraft during World War II but was never invaded by the Axis. Most of the population are Maltese, speaking the Phoenician Maltese language, a tongue akin to Syriac and Arabic. The islands are densely populated (2,595 per sq. mi.).

Under its 1947 constitution, Malta enjoys a measure of self-government. The locally-elected assembly has complete control over domestic affairs, but the British government keeps control over matters dealing with defense and foreign affairs.

The climate is temperate and healthful. Annual mean temperature is 64.5°, with June-September the hottest months and December-February the coldest (56°). Rainfall is irregular.

## AFRICA

**ANGLO-EGYPTIAN SUDAN** (See EGYPT).

## BRITISH SOUTH AFRICAN PROTECTORATES

High Commissioner: Sir John Le Rougetel.

The three British protectorates in southern Africa—Basutoland, Bechuanaland and Swaziland—are not part of the Union of South Africa, but are administered by a High Commissioner responsible to the Secretary of State for Commonwealth Relations in the British cabinet. He also holds the office of High Commissioner for the

United Kingdom in the Union of South Africa.

**BASUTOLAND**—Status: Protectorate.  
Capital: Maseru (population 3,383).  
Resident Commissioner: E. P. Arrow-smith.

Foreign trade (1951): exports, £2,752,054; imports, £2,836,049. Chief exports: wool, mohair.

Agricultural products: corn, wheat, sorghum.

Basutoland is a mountainous enclave surrounded by the Union of South Africa and bounded by the Orange Free State, Cape Province and Natal. It was constituted a native state under British protection by a treaty signed with the native chief Moshesh in 1843. It was annexed to Cape Colony in 1871, but on Mar. 13, 1884, was restored to direct control by the Crown. The resident commissioner is advised by a council of 100, of whom 95 are nominated by the native chiefs who administer the affairs of their tribes.

The population is restricted almost entirely to the lowland strip in the west; the white population (1,676 by the last census, in 1946) consists solely of officials, missionaries, traders and a few labor agents for employers in the Union of South Africa. About 100,000 natives are regularly employed in the Union. Sheep raising is highly developed. Land is the common property of the nation, held in trust by the chiefs. There are no European farmers.

The climate is dry and variable; temperatures range from 11° to 93°. Rainfall also is variable, but is heaviest during the summer; it averages about 30 inches annually.

**BECHUANALAND**—Status: Protectorate.  
Capital: Mafeking, in Cape Province (population 4,666).

Resident Commissioner: (Vacant).  
Foreign trade (1951): exports, £2,153,365; imports, £1,674,372. Chief export: pastoral products.

Agricultural products: hides and skins, cattle, butter, millet, maize.

Minerals: gold and silver.

Bechuanaland lies in south central Africa, bounded on the south and southeast by the Union of South Africa, on the west by South-West Africa, on the north by Angola and Northern Rhodesia and on the northeast by Southern Rhodesia. Its average elevation is 3,300 feet and the greater part is gently undulating. The area was placed under British protection on Sept. 30, 1885, to prevent further Boer encroachment and has since remained a British protectorate. The form of government is similar to that of Basutoland.

Most of the inhabitants are Bantu, but there were 2,325 Europeans in 1946, a few of them farmers. The country is essentially pastoral, with cattle raising and dairy farming the chief industries. Gold is mined in the Tati district near Francis-

town. There is also some mining of silver and copper. Timber is produced for use as fuel and pit props.

The summers are intensely hot; winters (May-August) are pleasant. Rainfall occurs mostly between December and May, and dust storms are frequent.

**SWAZILAND**—Status: Protectorate.  
Capital: Mbabane (population 1,600).  
Resident Commissioner: D. L. Morgan.  
Foreign trade (1951): exports, £2,639,765; imports, £1,878,984. Chief exports: cattle, asbestos.

Agricultural products: cattle, hides and skins, butter, tobacco, corn, millet.

Minerals: asbestos, tin, gold.

Swaziland lies at the southeastern corner of the Transvaal. It is largely hilly, with an average elevation of 4,000 feet in the west. It came under the protection of the Transvaal Republic in 1894 but was made a British protectorate in 1906 under the high commissioner for South Africa.

The natives are mostly Swazi; there were 3,204 Europeans in 1946, mostly farmers. Grazing is the principal native occupation; there is excellent pasture in the high land to the west. Tropical and subtropical crops are raised in the lower areas. Tin is mined near Mbabane.

Rainfall is moderate throughout the protectorate and is heaviest in summer. Average temperature ranges from about 65° in July to 80° or more in January.

## EAST AFRICA HIGH COMMISSION

The East Africa High Commission, comprising the governors of Kenya, Tanganyika and Uganda, administers the public utilities and other central services of those territories, and has power to legislate with respect thereto with the advice and consent of a central legislative assembly. The governments of the three areas are otherwise independent of one another.

**KENYA**—Status: Colony and protectorate.

Capital: Nairobi (pop. 1948: 119,489).

Governor: Sir Evelyn Baring.

Foreign trade (1952)\*: domestic exports, £25,792,000; re-exports, £3,912,000; imports, £59,299,000. Chief exports: coffee (28%), sisal (17%), maize, tea.

Agricultural products: coffee (1951-52: 16,100 long tons), sisal (1952: 35,300 tons), tea (6,600 tons), pyrethrum, sugar cane, cotton, maize, hides and skins.

Minerals: gold (exports 1952: 15,800 oz.), sodium carbonate, silver, salt.

Forest products: wattle bark and extract, timber.

\* Import and re-export figures exclude outward transfers of imported goods to Tanganyika and Uganda.

Kenya extends along the Indian Ocean between Ethiopia and Tanganyika Territory and westward to Lake Victoria and Uganda. Formerly known as the East Af-

rica Protectorate, it was held under a concession from the Sultan of Zanzibar by the Imperial British East Africa Company from 1888 to 1905. It became a Crown colony in 1920, the coastal strip leased from the Sultan of Zanzibar becoming a protectorate.

The colony is predominantly agricultural, and a large area is cultivated by Europeans. Altitude ranges from sea level to more than 9,000 ft.; hence, the cultivation of tropical, subtropical and temperate crops is possible. Non-natives (1948) included 29,500 Europeans, 23,900 Arabs and 90,900 British Indians. Serious outbreaks of native terrorism inspired by the Mau Mau secret society began in 1952.

The coastal zone of Kenya is hot and humid; February to April are the hottest months, with a mean temperature of 82° at Mombasa. June and July are coolest (76° at Mombasa). The yearly average rainfall is about 48 inches. In the interior highlands the climate is temperate, and the rainfall comparatively heavy. Yearly average temperatures at Nairobi are 60° to 66°.

**TANGANYIKA TERRITORY**—Status: U. N. trust territory.

Capital: Dar es Salaam (pop. 1948: 69,227).

Governor: Sir Edward F. Twining.

Foreign trade (1952)\*: domestic exports, £47,020,000; re-exports, £954,000; imports, £37,495,000. Chief exports: sisal (46%), coffee (12%), cotton, hides and skins.

Agricultural products (1952): sisal (162,200 long tons), coffee (exports) (18,500 tons), cotton (exports) (11,100 tons), peanuts, sugar cane, tea.

Minerals (exports 1952): gold (64,700 fine oz.), diamonds (331,600 carats).

Forest products: gum arabic and copal, beeswax, timber.

\* Import and re-export figures exclude outward transfers of imported goods to Kenya and Uganda.

Tanganyika Territory, with the Belgian Ruanda and Urundi, constituted German East Africa from 1884 until 1919. It was administered under League of Nations mandate by Britain until 1946, when it was placed under United Nations trusteeship, with Great Britain as the administering power.

Tanganyika's narrow coastal plain is bordered on the west by the precipitous eastern side of the Central African plateau. Mount Kilimanjaro (19,565 ft.) is the highest point on the African continent. The territory also includes adjacent islands in the Indian Ocean.

The territory is sparsely populated; about two-thirds of the total area is uninhabited. In 1948 there were 16,100 Europeans and 59,300 Asiatics. It is the world's largest producer of sisal hemp. Most of the hemp, which is of the highest grade, is grown in the drier parts of the coast belt under European supervision. Stock raising

is also important, but its progress is hampered by prevalence of the tsetse fly. A large diamond vein was discovered at Shinyanga in 1946.

The climate generally is hot and humid on the coastal areas, with the temperature averaging 80° at Dar es Salaam. Rainfall in the capital averages 60 inches. Inland the rainfall and temperature are lower.

**UGANDA**—Status: Protectorate.

Capital: Entebbe (population 7,321).

Governor: Sir Andrew Cohen.

Foreign trade (1952)\*: domestic exports, £47,223,000; re-exports, £482,000; imports, £24,296,000. Chief exports: cotton lint (63%), coffee (26%).

Agricultural products: cotton (1951-52: 67,900 long tons), coffee (1952 exports: 39,400 tons), sugar cane, rubber, tea, sisal.

Minerals: gold, tin.

\* Import and re-export figures exclude outward transfers of imported goods to Kenya and Tanganyika.

Uganda lies immediately south of Anglo-Egyptian Sudan and west of Kenya, along the northwest shore of Lake Victoria. The surface is extremely diversified, with lofty plateaus, snow-capped peaks, swamps, forests and arid areas. A British protectorate over the area was proclaimed in 1894. A large measure of home rule is given the native states, notably Buganda, whose *kabaka* (king) is assisted by a ministry and native parliament.

Agriculture, including livestock, is the basis of the economy. Cotton is raised, principally by natives, and coffee, tea and rubber are grown on large plantations. Most natives possess large herds of cattle and sheep. In 1948 there were 7,600 Europeans and 37,450 Asiatics.

Like the topography, the climate is extremely variable. At Entebbe, the mean temperature is about 70°, with rainfall heaviest from March through May, and in November and December.

**GAMBIA**—Status: Colony and protectorate.

Capital: Bathurst (population 19,602).

Governor: Sir Wyn Harris.

Foreign trade (1952): exports, £3,960,045; imports, £3,708,991. Chief export: peanuts (1952: 60,683 long tons).

Agricultural products: peanuts, hides and skins, millet, rice, palm kernels.

Gambia, smallest of the British West African dependencies, is a stretch of land 200 miles long on both sides of the lower Gambia River, surrounded on all land sides by French West Africa and fronting on the Atlantic Ocean. During the 17th century it was settled by various companies of English merchants; slavery was the chief source of revenue until it was abolished in 1807. Gambia became a Crown colony in 1843. Except for the island of St. Mary, on which the capital stands, the area is administered as a protectorate.

The inhabitants, mostly Negroes or ne-  
groids, are predominantly Mohammedan.  
The principal economic activity is the cul-  
tivation of peanuts. Internal transporta-  
tion is by steamer and launch. Tempera-  
tures are fairly regular throughout the  
year, ranging from about 60° to 85°. Maxi-  
mum rainfall is in August and September.

**GOLD COAST—Status:** Colonies (Gold  
Coast Colony, 23,937 square miles; Ashanti,  
24,379 square miles); protectorate (North-  
ern Territories, 30,486 square miles); U. N.  
trust territory (Togoland, 13,041 square  
miles).

**Capital:** Accra (population 135,456).

**Governor:** Sir Charles Arden-Clarke.

**Prime Minister:** Kwame Nkrumah.

**Foreign trade (1952):** exports, \$86,160,-  
000; imports, \$67,200,000. Chief exports:  
cacao, gold, manganese ore.

**Agricultural products:** cacao (1951-52:  
194,760 long tons), copra, palm kernels.

**Minerals (1951):** gold (698,640 oz.), man-  
ganese ore (804,000 long tons), diamonds  
(475,200 carats).

Early a center of the slave trade and  
of Anglo-Dutch rivalry, the Gold Coast,  
stretching along the Gulf of Guinea for  
370 miles, became a British possession in  
1871. Ashanti, in the interior, became a  
protectorate in 1896 and was annexed in  
1901. The Northern Territories, to the  
north of Ashanti, were made a protectorate  
in 1901. Under the 1951 constitution,  
which gave the colony greater responsibil-  
ity in its own affairs than any other British  
colony in Africa, the Gold Coast is admin-  
istered by a governor with a cabinet headed  
by a prime minister and a legislative as-  
sembly of 84 (75 are Africans). Togo-  
land, formerly German, was divided into  
French and British spheres and placed un-  
der League of Nations mandate after World  
War I, under U. N. trusteeship in 1946.

Except for 6,773 non-Africans (1948),  
the population is all Negro. The main na-  
tive industry is the cultivation of cacao,  
in the production of which the colony  
leads the world. The climate on the coast  
is hot and humid, ranging on the average  
from 78° to 80°. Rainfall is chiefly from  
March to July and from Sept. to Oct.

**KENYA (See EAST AFRICA HIGH COM-  
MISSION)**

**MAURITIUS—Status:** Colony.

**Capital:** Port Louis (population 79,084).

**Governor:** Sir Robert Scott.

**Foreign trade (1952):** exports (including  
re-exports), 251,699,466 rupees; imports,  
230,800,423 rupees. Chief export: sugar  
(95%).

**Agricultural products:** sugar (1952: 468,-  
000 metric tons), copra, tobacco.

Mauritius is a mountainous island of  
volcanic origin in the Indian Ocean, about  
500 miles east of Madagascar. It was seized  
in 1810 from the French, who had settled  
it in 1715, and was formally ceded to Great

Britain by the Treaty of Paris in 1814.

With over 600 persons per square mile,  
the island is one of the most densely popu-  
lated regions in the world. The popula-  
tion has a large white element, chiefly  
French and British, but British Indians  
are predominant. There are many half-  
castes. The leading industry is sugar culti-  
vation.

The climate is pleasant during the cool  
season, but extremely hot from December  
to April (90° to 96° at Port Louis). During  
this period there are also frequent torrents  
of rain and occasional severe cyclones.

**NIGERIA—Status:** Colony and protec-  
torate.

**Governor:** Sir John S. Macpherson.

**Principal cities (est. 1948):** Ibadan, 335,-  
000 (native metropolis); Lagos, 230,000  
(capital); Kano, 100,000 (textiles, leather  
goods, cattle).

**Monetary unit:** British pound.

**Languages:** Native tongues, Arabic, Eng-  
lish.

**Religions:** Mohammedan, Pagan, Chris-  
tian.

Nigeria, with an area twice that of Cal-  
ifornia, is situated on the Gulf of Guinea  
in West Africa. It was visited by European  
traders and explorers in the 16th and 17th  
centuries, and by the end of the 18th  
century British operators had a virtual  
monopoly in the area. Between 1879 and  
1914, a series of private colonial develop-  
ments by the British, together with re-  
organizations of the Crown's interest in  
the region, resulted in the formation of  
Nigeria as it exists today. During World  
War I, native troops of the West African  
frontier force joined with French forces to  
defeat the German garrison in the Cam-  
eroons. The Cameroons, a narrow strip  
along Nigeria's eastern border, became a  
League mandate after World War I, divided  
between France and Britain. Today the  
British Cameroons, a U. N. trust territory,  
is attached to Nigeria for administrative  
purposes.

The governor of Nigeria, named by the  
British Crown, heads the administration  
of the colony, which (including the Cam-  
eroons) is divided into four sections, each  
composed of several provinces. Under the  
1951 constitution, each of the three regions  
of Nigeria proper has an elected legislative  
assembly, which in turn elects the members  
of the central legislature. There are also  
regional and central legislative councils.

The vast majority of the population is  
Negro, although in the north there has  
been an admixture caused by invasions of  
Fula, Berber and Arab or Arabized people.  
Mohammedanism is the dominant religion.

Most of the people are agriculturists.  
The staple food crops are durra (guinea  
corn), millet, yams, bananas and maize.  
Among the leading export crops are cacao  
(1952 exports: 114,720 long tons), pea-

nuts (decorticated) (260,400 tons), palm kernels (374,400 tons), palm oil (166,800 tons) and rubber (18,190 tons). Hides and skins are also important export items. Aside from small native industry, there is no manufacturing.

Most external trade is with Britain. Chief exports are cacao, peanuts, palm kernels and oil and tin ore. Exports in 1952 totaled £120,000,000; imports, £112,960,000.

There is a substantial internal trade; Kano is a busy terminal for caravan routes. The Niger and several other rivers are navigable; otherwise, the 1,901 miles of railway are the chief means of transportation. Highway mileage totals about 21,000. The main ports, except Lagos, are on rivers. Air service is supplied by BOAC, Air France and other international lines.

Nigeria is a leading tin producer—8,280 long tons in 1952—from mines on the Bauchi plateau. Other minerals are coal, gold, lead, silver and tungsten. Over half the area is forested, but forest resources are comparatively unexploited. Mahogany is the main timber export, followed by cedar and walnut. Gum arabic is also exported.

Extending from twenty to sixty miles inland from the coast is the swampy Niger delta region, gradually giving way to hilly forest land. The larger part of the colony belongs to the great African plateau which, in Nigeria, reaches a maximum height of 3,000 feet. All of the colony lies within the tropics, but the climate varies from tropical in the south to near temperate on some parts of the plateau. In the south the temperature varies between 70° and 100°, and averages upwards of 80°.

**NORTHERN RHODESIA**—Status: Colony.

Capital: Lusaka (European population 6,000).

Governor: Sir Gilbert Bennie.

Foreign trade (1952): exports, £82,604,-997; re-exports, £875,139; imports, £42,760,-398. Chief export: copper (91%).

Agricultural products: tobacco, maize, wheat.

Minerals: copper (1952: 312,354 long tons), cobalt, vanadium, lead, zinc.

Northern Rhodesia is in south central Africa, bounded on the north by the Belgian Congo and Tanganyika Territory, on the east and southeast by Nyasaland and Mozambique, on the southeast and south by Southern Rhodesia and Bechuanaland, and on the west by Angola. Much of the country consists of high plateau, with the Congo-Zambezi watershed rising in places to 5,000 feet. Rhodesia was assigned in 1889 to the British South Africa Company, headed by Cecil Rhodes. Administrative control was transferred to the Crown on Apr. 1, 1924.

Native tribes number from 50 to 60; there were 43,000 Europeans in 1952. More than 3,000,000 acres are owned and occu-

pled by Europeans. Metals constitute almost all exports by value. Lead and zinc deposits occur at Broken Hill; copper at Bwana M'Kuba. The main line of the Rhodesian railway crosses the northern part of the colony from Livingstone to the Congo border. A number of rivers are navigable.

Average temperature in the south ranges from about 65° in July to 80° or more in October. The rainfall occurs principally between November and April.

**NYASALAND**—Status: Protectorate.

Capital: Zomba (pop. 1949: 7,526).

Governor: Sir Geoffrey F. T. Colby.

Foreign trade (1952): exports and re-exports, £6,301,225; imports, £8,771,631. Chief exports: tobacco (34%), tea (30%).

Agricultural products: tobacco (1951: 18,070 short tons), tea, cotton.

Nyasaland, a British protectorate since 1891, is a narrow area lying between Mozambique, Northern Rhodesia and Tanganyika Territory along the southern and western shores of Lake Nyasa. Agriculture is the chief occupation, both of the European settlers and natives. Europeans numbered 4,073 in 1952.

Lake Nyasa furnishes the principal transportation facility. Mineral and forest resources are limited.

The climate is extremely humid along the shores of Lake Nyasa, although the temperature rarely rises above 95°. In the highlands, above 3,000 feet, average temperatures are considerably lower. The dry season, from May to September, is comparatively cool.

**ST. HELENA**—Status: Colony.

Capital: Jamestown (population 1,547).

Governor: James D. Harford.

Foreign trade (1952): exports, £137,020; imports, £207,836. Chief exports: flax fiber and tow.

Agricultural products: flax, potatoes.

St. Helena is a volcanic island (47 sq. mi.) in the South Atlantic about 1,200 miles from the west coast of Africa. It is famous as the place of exile of Napoleon (1815-21). It was taken for Britain in 1651 by the British East India Company and became a Crown colony in 1833. Attached to it are Ascension Island (34 sq. mi.), 800 miles northwest, and the Tristan da Cunha group (45 sq. mi.), about 1,500 miles southwest. Most of the inhabitants are of mixed European, East Indian and African descent. Ascension was an Allied air base in World War II.

Although St. Helena is in the tropical zone, its climate is temperate and healthful; the temperature varies from 68° to 84° in summer and 57° to 90° in winter.

**SEYCHELLES**—Status: Colony.

Capital: Victoria (population 9,497).

Governor: William Addis.

Foreign trade (1951): exports (domestic), 10,149,507 rupees; imports, 7,324,257 rupees. Chief export: copra (70%).

**Agricultural products:** cinnamon, patchouli oil, coconuts, maize, sugar cane.

This archipelago of about 92 islands in the Indian Ocean was seized from France by British troops in 1794 and was ceded to Great Britain by the Treaty of Paris in 1814. The principal island is Mahé (55 sq. mi.), about 600 miles northeast of Madagascar. The climate is temperate.

**SIERRA LEONE—Status:** Colony and protectorate.

**Capital:** Freetown (population: 64,576).  
**Governor:** Sir Robert Hall.

**Foreign trade (1952):** exports, £10,164,298; imports, £10,282,485. **Chief exports:** palm kernels (46%), iron ore, kola nuts, diamonds.

**Agricultural products:** palm kernels and oil, rice, millet, cassava, rubber.

**Minerals (exports 1952):** iron ore (1,378,959 long tons), diamonds (423,327 carats), gold (2,321 troy oz.).

**Forest products:** palm kernels, piasava.

Sierra Leone lies on Africa's west coast between French Guinea and Liberia. It is a well-watered hilly country but has a low swampy coastland with an extremely unhealthy climate. The coastal area (colony proper) was ceded to English settlers in 1788 as a home for Negroes discharged from the British armed forces and also for runaway slaves who had found asylum in London. The British protectorate over the hinterland was proclaimed in 1896. It was not until 1928 that slavery was totally abolished in the protectorate. Under the 1951 constitution there is a legislative council of 30 members, of whom 21 are elected directly or indirectly.

Freetown is the best harbor on the west coast.

**SOMALILAND—Status:** Protectorate.

**Administrative center:** Hargeisa (population 17,500).

**Governor:** Theodore O. Pike.

**Foreign trade (1952):** exports, £924,000; imports, £2,064,000. **Chief export:** hides and skins.

**Agricultural products:** cattle, hides and skins, grains.

**Forest products:** gums and resins.

British Somaliland extends along the Gulf of Aden for about 400 miles and inland for 80 to 220 miles. The interior is an elevated plateau falling in steep escarpments to the coastal plain. It came under Egyptian influence in 1875, but during the years 1884-86 treaties guaranteeing British protection were signed with the various Somali chiefs. Italian troops occupied the protectorate in 1940, but it was retaken by British troops in 1941. Both executive and legislative power is exercised by the governor.

Most of the inhabitants are nomadic Somalis of Mohammedan faith. Their principal activity is stock raising. The climate is extremely hot and arid, with rainfall in

the coastal areas averaging less than 8 inches. The average temperature at Berbera, on the coast, is 77° in January and about 98° in July.

**SOUTHERN RHODESIA—Status:** Self-governing colony.

**Capital:** Salisbury (population: 61,760).

**Governor:** Maj. Gen. Sir John N. Kennedy.

**Prime Minister:** Sir Godfrey M. Huggins.

**Foreign trade (1952):** exports, £51,135,252; re-exports, £10,101,417; imports, £88,474,512. **Chief exports:** tobacco (37%), asbestos, gold, chrome ore.

**Agricultural products:** tobacco (1952: 99,769,720 lb.), corn, peanuts, meat, hides and skins.

**Minerals (1952):** asbestos (84,834 short tons), gold (496,731 fine oz.), coal (2,821,221 short tons), chrome ore.

Southern Rhodesia is located between Northern Rhodesia, Bechuanaland, the Union of South Africa and Mozambique in south central Africa; it is part of the great South African plateau. The Zambezi River separates Northern and Southern Rhodesia.

The country was settled in 1890 by the British South Africa Company, led by Cecil Rhodes. With the expiration of the company's charter, the white residents voted (1922) in favor of a responsible government of their own, and on Sept. 12, 1923, the country was annexed to Britain.

Southern Rhodesia's constitutional position is midway between that of a colony and a dominion. It has responsible government and a popularly elected Legislative Assembly of 30 members, but control of foreign relations and certain other matters is reserved to the U. K. government.

Most of the inhabitants are natives, but the country is well-adapted to European settlers, who in mid-1952 numbered 152,000. In addition, there were 10,900 Asiatics and half-castes. Mining is the basis of the economy. Farming ranges from ranching to tobacco growing, but mixed farming is becoming more common. Conditions for cattle raising and dairy farming are especially favorable. Manufacturing is of growing importance, with the factories producing goods valued at £51,010,834 in 1951. The colony is well served with railways (1,361 mi.), roads (4,000 mi.) and airlines.

The hottest month is October (mean maximum 85.2°); the coolest are June, July and August, when frost is likely to occur. Generally the days are hot throughout the year, and the nights are frequently cool. Rainfall is greatest in October, November and December.

**SOUTH-WEST AFRICA (See UNION OF SOUTH AFRICA)**

**SWAZILAND (See BRITISH SOUTH AFRICAN PROTECTORATES)**

## TANGANYIKA &amp; UGANDA (See EAST AFRICA HIGH COMMISSION)

## Union of South Africa

(Member of British Commonwealth)

Area: 472,550\* square miles.

Population (est. 1952): 12,912,000\* (European, 21.0%; Bantu, 67.5%; mixed, 8.2%; Asiatic, 3.3%).

Density per square mile: 27.3.

Governor General: Ernest G. Jansen.

Prime Minister: Daniel F. Malan.

Principal cities (census 1951): Johannesburg, 880,014 (gold, industrial center); Capetown, 571,638 (seat of legislature, seaport); Durban, 475,026 (seaport); Pretoria, 283,148 (seat of administration); Port Elizabeth, 187,071 (seaport).

Monetary unit: South African pound (£SA).

Languages: English, Afrikaans.

Religions (European pop., 1946): Dutch Reformed Churches, 55%; Anglican Church, 19%; Methodist, 6%; Presbyterian, 5%; Roman Catholic, 5%; others 10%.

\* Excluding South-West Africa.

**HISTORY.** After the discovery of the Cape of Good Hope in 1488 by Bartholomeu Diaz, the Dutch sent the first colonists to the area in 1652. The British seized the territory in 1814 near the close of the Napoleonic wars, when Holland was France's ally. In protest against the British rule, thousands of Boers, settlers of Dutch descent, trekked northward between 1835 and 1838 and set up the republics of Orange Free State and Transvaal, subsequently recognized by the British.

The discovery of gold in Transvaal in 1886 brought an influx of English and other foreigners. British demands that these immigrants be enfranchised by the Transvaal government precipitated the South African War of 1899-1902, won by the British. By the Treaty of Vereeniging (May 31, 1902) the Boers renounced the independence of Transvaal and Orange Free State. In 1910, Cape Colony, Transvaal, Natal and the Orange Free State were set up as the Union of South Africa, with dominion status and with Louis Botha, a former Boer general, as the first prime minister. During World War I, South African forces seized German South-West Africa, over which the Union later received a mandate by the Treaty of Versailles.

When World War II broke out, there was considerable pro-German and anti-British feeling in South Africa. The country went to war against the Axis, however, under the leadership of Prime Minister Jan C. Smuts.

In the elections of May, 1948, Smuts' United party was defeated by a Nationalist-Afrikaner coalition, which favored strict racial segregation. Enforcement of this policy has led to severe racial disturbances and unrest and a prolonged constitutional

crisis. The National party (merged with the Afrikaner party in 1951) was continued in office in the April 1953 elections.

**GOVERNMENT.** The Union of South Africa, as a self-governing nation, has its own legislature, a Senate of forty-eight members elected for ten years, and a House of Assembly of 159 members elected for five years. All legislators must be Union nationals of European descent, and suffrage is virtually limited to whites. The governor general, appointed by the British Crown after consultation with the Union, can summon or dissolve the Senate and House, but a general election must be held at least once every five years.

In parliamentary elections held April 15, 1953, the National party won 94 seats, United party 57 and Labour party 5. Three seats are held by representatives of natives.

The elected councils in each of the four provinces have only such powers as are delegated to them. Each is headed by an administrator appointed by the central government.

Political considerations made the draft inexpedient in World War II, and all members of the armed forces were volunteers. The postwar strength of the defense forces is fixed as follows: army, 4,640; air force, 3,319; navy, 863; a total strength of 8,822 as opposed to 5,549 in the prewar establishment. The navy, only slightly expanded in World War II, has 60 small vessels.

**EDUCATION.** Education for white children is compulsory from 7-16. Primary education is free and, except for vocational schools and the six universities, all education is under provincial control.

In 1947 there were 2,959 state and state-aided primary and secondary schools for European scholars, who numbered 422,241, and 6,151 non-European schools with enrollment of 903,072. The universities (9 in 1951) had 23,977 students in 1949.

The official languages are English and Afrikaans. The latter, derived from 17th-century Dutch, is taught in almost all the schools. About 70 per cent of the population over 7 years old understands both languages. People speaking Afrikaans as a "home" language predominate in all provinces except Natal, where most of the Asiatic population, chiefly laborers from South India, is concentrated. European and Asiatic immigration is strictly controlled.

**AGRICULTURE.** South Africa is predominantly a pastoral country, with less than 15 per cent of its area considered arable. Sheep and cattle raising are the principal occupations, especially in the high veldt. Wool production in 1952 was estimated at 220,000,000 lbs. In 1951 there were 34,-823,000 sheep, 11,565,000 cattle and 681,-000 hogs.

Climate and differences in terrain combine to give a great variety of agricultural products. The staple crop is maize, grown widely with a production varying from 1½ to 3 million tons annually. In southwest Cape Province, products of the Mediterranean type predominate, while in the coastal belt of Natal and in northern Transvaal, subtropical crops, especially sugar, are grown.

Production of leading crops in recent years has been estimated as follows: maize (1950-51: 2,717,000 short tons); wheat (748,000 tons); tobacco (21,670 tons); sugar (684,000 tons).

**MANUFACTURING & TRADE.** In 1948-49, there was a total of 14,361 factories with 670,000 workers, and gross value of industrial output (1947) of £491,800,000. Food, beverages and tobacco, and metal products are leading products. As a result of the need for armaments in World War II, the Union's manufacturing is no longer mainly devoted to agricultural processing. A wartime iron and steel industry was established, and cement, chemical, textile and auto assembly plants were expanded. Steel production (1952) was 1,260,000 metric tons; that of pig iron, 1,125,600 tons. The major industrial area is southern Transvaal.

Trade statistics (in millions of South African pounds):

	1950	1951	1952
Exports*	252.2	346.9	332.4
Re-exports†	23.5	33.4	36.6
Imports	306.9	470.0	420.1

\* Excluding gold bullion. † Included in export total.

Chief customers in 1951 were Britain (24%), France (15%), the U. S. (11%) and Southern Rhodesia (8%); the principal suppliers, Britain (35%), the U. S. (19%), Canada (6%). Chief exports (besides gold bullion) were wool (24%), semi-processed gold (15%) and diamonds (8%). Principal imports included textiles, farm and industrial machinery, motor vehicles and petroleum products.

**COMMUNICATIONS.** The well-organized railway system, mostly Union-controlled, totaled 13,942 miles in 1950. Roads suitable for motor traffic amounted to 100,000 miles. Regular air service is available to Europe and to the U. S.

**FINANCE.** Recent data are as follows (in millions of South African pounds):

	1950-51	1951-52*	1952-53†
Revenue	195.7	226.3	207.3
Expenditure	223.2	270.2	205.9

\* Preliminary. † Budget estimate.

The gross public debt of the Union on Jan. 31, 1953, was £SA833,300,000, of which £SA48,300,000 was external. Notes in circulation on Feb. 28, 1953, totaled £SA86,200,000; the gold reserve was U. S. \$173,000,000.

**TOPOGRAPHY AND CLIMATE.** The Union has a high interior plateau, or veldt, nearly half of which averages 4,000 feet in elevation. There are no important mountain ranges, although the Great Escarpment, separating the veldt from the coastal plain, rises to over 10,000 feet. The principal river is the Orange, rising in Basutoland and flowing westward for 1,300 miles through the Union's center to the Atlantic.

Except for the western semi-arid regions, the climate is generally subtropical, much like that of northern Florida. Rainfall averages about 40 inches a year on the east coast and decreases sharply westward. The mean annual temperature is remarkably uniform; at Johannesburg it is 60.6°, with January the hottest month. Most of the rainfall occurs from October to March. **MINERALS, FORESTS AND FISHERIES.** Extensive mineral resources account for the economic prosperity. The Union is the world's leading gold producer. Diamond production is now surpassed in importance by coal. Mineral production for 1952 included gold, 11,818,691 oz.; coal, 30,037,516 short tons; copper, 37,606 tons; diamonds, 2,349,743 carats; (1951) manganese ore, 919,000 tons; chromite, 600,000 tons; iron ore, 1,565,000 tons; asbestos, 107,000 tons; platinum, 197,260 oz. Gypsum, tin, tungsten and antimony also are mined, and uranium deposits have been reported.

Forests cover only a small portion of the Union, and are mostly in the east. The whaling industry, centered at Durban on the east coast, produces considerable amounts of whale oil. The Union has extensive fishery resources along the 1,500 miles of coast line. Annual trawler catch of edible fish is about 95,000,000 pounds.

**SOUTH-WEST AFRICA—Status:** Mandate.

Administrator: A. J. R. van Rhyn.

Capital: Windhoek (population 23,359).

Foreign trade (1952)\*: exports, £SA35,495,038; imports, £SA20,149,928. Chief exports: karakul skins, butter, slaughter animals, diamonds.

Agricultural products: hides and skins, butter, corn, wheat.

Minerals: diamonds (1952: 537,450 carats), vanadium concentrates, tungsten, lead, tin, iron ore, copper.

\* Includes trade with Union of South Africa.

The mandate, bounded on the north by Angola, and on the east by Bechuanaland and the Union of South Africa, was discovered by the Portuguese explorer Diaz in the late 15th century. It is for the most part a portion of the high plateau of South Africa with a general elevation of from 3,000 to 4,000 feet. It became a German colony in 1884 but was conquered by South African forces in 1915, becoming a Union mandate by the terms of the Treaty of Versailles. The Union of South Africa's

application for incorporation of the territory into the Union was rejected by the United Nations assembly on Dec. 14, 1946, and the Union was invited to prepare a trusteeship agreement instead. By a law passed in April, 1949, however, the territory was brought into much closer association with the Union—including representation in the Union Parliament.

The country in general is better suited to grazing than to the raising of crops because of the light rainfall. The karakul sheep industry is particularly well-developed; in 1952, 2,503,925 pelts were exported. The Union accounts for almost all the imports and about 40 per cent of the exports. The principal port is Walvis Bay.

#### **ZANZIBAR—Status: Protectorate.**

Capital: Zanzibar (population 60,000).

Sultan: Seyyid Sir Khalifa bin Harub.

British Resident: J. D. Rankine.

Foreign trade (1952): exports, £3,972,646; re-exports, £852,506; imports, £5,177,553. Chief export: cloves (75%).

Agricultural products: cloves (1952: 11-756,473 lb.), copra, coconut oil, sisal.

The protectorate consists principally of the islands of Zanzibar (640 sq. mi.) and Pemba (380 sq. mi.), just off the East African coast. Before 1890, the sultanate's territory also included a large area on the mainland, now comprising Italian Somaliland, Kenya and Tanganyika Territory. It was proclaimed a British protectorate Nov. 4, 1890. The British resident administers the government, but the sultan still retains considerable authority.

The principal industry is the production of cloves—80 per cent of the world supply.

The climate is excessively hot and moist, with a mean annual temperature of 80.5°. June to September is the coolest season.

## **WESTERN HEMISPHERE**

#### **BAHAMAS—Status: Colony.**

Capital: Nassau (population 36,246).

Governor: Maj. Gen. Sir Robert Neville.

Foreign trade (1952): exports (including re-exports), £1,211,711; imports, £8,823,786. Chief exports: lumber, tomatoes.

Agricultural products: tomatoes, citrus fruit, sisal.

Sea products: sponges, lobsters.

The Bahamas are an archipelago of about 3,000 islands, islets (cays) and rocks, east of Florida and north of Cuba, extending from N.W. to S.E. for about 800 miles. Only about 20 of the islands are inhabited; the most important is New Providence (20 sq. mi.) on which Nassau is located. The islands were reached by Columbus in Oct., 1492, and were a favorite pirate resort in the early 18th century. They have been a Crown colony since 1717. The constitution provides for a nominated Legislative Council and a popularly elected As-

sembly. The governor is advised by an Executive Council.

About 87 per cent of the population is Negro. The tourist trade is of considerable importance, especially at Nassau, which is a favorite winter resort. The climate is exceptionally agreeable, with mean temperatures ranging from 60° (January to March) to 88° (June to September). The rainy season is May through October; hurricanes occur usually from July to October.

Agriculture, except for tomato and sisal culture, is of little importance. Straw and shellwork are the principal industries. An R.A.F. unit is stationed in the archipelago.

#### **BARBADOS—Status: Colony.**

Capital: Bridgetown (population 13,345).

Governor: Sir Robert Arundell.

Foreign trade (1951): exports, BWI\$35,-464,166; imports, BWI\$51,918,327. Chief exports: sugar (65%), molasses, rum.

Agricultural products: sugar (1951: 164,-566 long tons), cotton.

Manufactures: rum (1951: 1,775,624 wine gal.), molasses (23,077 long tons).

Barbados, an island east of the Windward group in the West Indies, has been a British possession since 1627; it is believed to have been first visited by the Portuguese. The colony has a nominated Legislative Council and a popularly elected Assembly of 24 members, but the Crown, through the governor, has veto power.

The island is very densely populated (about 1,295 per sq. mi.). About 70 per cent of the inhabitants are Negro, 7 per cent white and the remainder of mixed blood. Approximately 70 per cent of the total area is cultivated and half of this is devoted to sugar, which is the staple product; there are sugar and molasses plants and several rum distilleries.

Barbados has an agreeable climate, with temperatures that range between 70° and 86°, rarely below 65°. The cold season (December through May) is also the dry season; average annual rainfall is 60 inches, with September the wettest month.

#### **BERMUDAS—Status: Colony.**

Capital: Hamilton (population 3,500).

Governor: Lt. Gen. Sir Alexander Hood.

Foreign trade (1952): exports (including re-exports), £1,485,506; imports, £11,379,-553. Chief export: cut flowers.

Agricultural products: lily bulbs, potatoes, vegetables, arrowroot.

The Bermudas comprise an archipelago of about 360 small islands, 580 miles east of North Carolina. The largest is (Great) Bermuda or Main Island. Discovered by Juan Bermudez, a shipwrecked Spaniard, early in the 16th century, the islands were settled in 1612 by an offshoot of the Virginia Company and became a Crown colony in 1684. The governor is assisted by nominated Executive and Legislative Councils and a popularly elected Assembly of 36 members. In 1940, sites on the islands

were leased for 99 years to the U. S. for air and navy bases. Bermuda is also the headquarters of the West Indies and Atlantic squadron of the Royal Navy. The most important factor in the colony's economy is the tourist trade. The mean annual temperature is 71°, with extremes of 49° and 94°. Rainfall averages 58 inches annually.

#### **BRITISH GUIANA—Status: Colony.**

Capital: Georgetown (population 97,-821).

Governor: Sir Alfred Savage.

Foreign trade (1952): exports (including re-exports), BG\$81,842,551; imports, BG\$82,711,558. Chief exports: sugar (50%), bauxite (27%), rice, rum.

Agricultural products: sugar (1952: 242,-692 long tons), rice, copra, coffee.

Minerals (1952): bauxite (2,285,966 long tons), gold (24,223 bullion oz.), diamonds (38,305 carats).

Forest products: balata, timber.

The only British possession in South America proper, British Guiana is on the northeastern coast between Venezuela and Surinam (Dutch Guiana). Settled by the Dutch in the 17th century, it was occupied by the British in 1796 and ceded to them at the end of the Napoleonic wars. Behind the low plain which contains the farm area is a higher area containing forest and mineral resources. The governor is assisted by an Executive Council; the Legislative Council has an elected majority.

The heterogeneous population includes Africans and mixed races, 49.5 per cent; East Indians, 44 per cent; aborigines, 2.5 per cent; Portuguese, 2.2 per cent; Chinese, 1 per cent; and others, .3 per cent.

Cultivated areas cover only 155,000 acres, mostly devoted to rice and sugar cane. About 86 per cent of the colony is forested, but the vast forest resources are relatively unexploited. Timber resources have been estimated at 41,000,000,000 cu. ft. of merchantable timber. Railway mileage is 110, and highway mileage about 700; communication to the interior is mainly by steamer and launch. The colony's production of bauxite was of strategic importance during World War II.

The coastland climate is relatively hot and humid, with average temperatures of 78° in January and 81° in October, and only a slight variation between day and night. Inland temperatures are roughly 3° higher. Rainfall is quite heavy along the coast.

#### **BRITISH HONDURAS—Status: Colony.**

Capital: Belize (population 31,221).

Governor: Patrick M. Renison.

Foreign trade (1952): exports (including re-exports), BH\$6,189,987; imports, BH\$12,-671,851. Chief exports: mahogany, pine.

Agricultural products: bananas, sugar cane, citrus fruits.

Forest products (1952): cedar lumber and logs (\$95,000 bd. ft.), mahogany logs and lumber (\$7,521,000 bd. ft.), pine lum-

ber (14,356,000 bd. ft.), chicle (306 short tons).

British Honduras is bounded on the north by Mexico and on the west and south by Guatemala. It was settled in 1662 by woodcutters from Jamaica. An irregular form of local government continued until 1871, when it became a Crown colony; it was separated from Jamaica in 1884. The governor is assisted by an Executive Council and a partly elected Legislative Council.

The colony's economy is dependent upon timber and other forest exports. Agriculture has never been adequately developed. There are no railways, and road development is backward (about 135 mi. surfaced). Most of the population are mestizos of Negro, native Indian and white descent.

The climate is subtropical, with maximum recorded temperature of 98°, and minimum of 50°. Rain falls mostly from May to February, and almost continuously from October through December.

## **Canada**

(Member of British Commonwealth)

Area (land only): 3,619,616 square miles.

Population (est. June 1, 1952): 14,430,000 (1951: British 48%; French 31%; German 4%; Ukrainian 3%; others 14%).

Density per square mile: 4.0.

Governor General: Vincent Massey.

Prime Minister: Louis Stephen St. Laurent.

Principal cities (census 1951): Montreal, 1,021,520 (seaport); Toronto, 675,754 (manufacturing center); Vancouver, 344,833 (Pacific seaport); Winnipeg, 235,710 (grain); Hamilton, 208,321 (iron and steel); Ottawa, 202,045 (capital); Quebec, 164,016 (seaport); Halifax, 162,217 (seaport); Edmonton, 159,631 (petroleum); Calgary, 129,060 (farming).

Monetary unit: Canadian dollar.

Religions (census 1951): Roman Catholic 43%; United Church 20%; Anglican 15%; Presbyterian 6%; Baptist 4%; others 12%.

**HISTORY.** The Norse explorer Lief Ericsson probably reached the shores of Canada (Labrador or Nova Scotia) in A.D. 1000, but the history of the white man in the country actually began in 1497, when John Cabot, an Italian in the service of Henry VII of England, reached the shore of Newfoundland or Nova Scotia. Canada was taken for France in 1534 by Jacques Cartier. The actual settlement of New France, as it was then called, began in 1604 at Port Royal in what is now Nova Scotia; in 1608 Quebec was founded. France's colonization efforts were not very successful, but French explorers by the end of the 17th century had penetrated beyond the Great Lakes to the western prairies and south along the Mississippi to the Gulf of Mexico. Meanwhile, the English Hudson's Bay Company had been established in 1670. Because of

## Canadian Governors General and Prime Ministers Since 1867

Term of office	Governor General	Term	Prime Minister	Party
1867-1869	Viscount Monck	1867-1873	Sir John A. Macdonald	Conservative

1952-	Vincent Massey			

the valuable fisheries and fur trade, a conflict developed between the French and English; in 1713, Newfoundland, Hudson Bay and Nova Scotia (Acadia) were lost to England.

During the Seven Years' War (1756-63), England extended its conquest, and the British general, Wolfe, won his famous victory over Montcalm outside Quebec (Sept. 13, 1759). The Treaty of Paris (1763), put Canada under English control.

At this time the population of Canada was almost entirely French, but in the next few decades thousands of British colonists emigrated to Canada from the British Isles and from the American colonies. Partly to placate the French who were concentrated in Quebec, Canada was divided into Upper (British) and Lower (French) Canada in 1791. In 1840 the two provinces again were joined under one government, and in 1849 the right of Canada to self-government was recognized. By the British North America Act of 1867, the Dominion of Canada was created through the confederation of Upper and Lower Canada, Nova Scotia and New Brunswick. Prince Edward Island joined the Dominion in 1873. In 1869 Canada had purchased from the Hudson's Bay Company the vast middle west (Rupert's Land) from which the provinces of Manitoba (1870), Alberta and Saskatchewan (1905) were later formed. In 1871 British Columbia joined the Dominion. The coun-

try was linked from coast to coast in 1885 by completion of the Canadian Pacific Railway.

During the formative years between 1867 and 1896, the Conservative Party led by Sir John A. Macdonald governed the country, except during the years 1873-78. In 1896 the Liberal Party took over and under Sir Wilfrid Laurier, an eminent French Canadian, ruled until 1911. In World War I, more than 500,000 Canadian soldiers fought for the Allied cause. After the Treaty of Versailles, Canada, a full-fledged nation, was admitted to the League of Nations and appointed its own representatives in foreign countries. By the Statute of Westminster (1931) the British Dominions, including Canada, were formally declared to be partner nations with Britain, "equal in status, in no way subordinate to each other," and bound together only by allegiance to a common Crown. The Liberal Party under W. L. Mackenzie King won the elections in 1935 and was returned to power in 1940 and 1945 (he had previously served as prime minister from 1921 to 1930 except for three months in 1926). On Nov 15, 1948, King resigned and was succeeded by Louis Stephen St. Laurent, who was returned as prime minister in the national elections of June 27, 1949.

Newfoundland became Canada's tenth province on March 31, 1949, following a plebiscite held July 22, 1948, in which the

people voted by a narrow margin to unite with Canada.

**GOVERNMENT.** Canada, a self-governing member of the British Commonwealth of Nations, is a federal union of 10 provinces whose powers are laid down in the British North America Act of 1867. The executive powers nominally rest in the hands of the Governor General, who represents the Queen and is appointed by her upon the recommendation of the Canadian Government.

Actually, the Governor General acts only with the advice of the Canadian Prime Minister and the members of the Cabinet, who at the same time sit in the federal Parliament. The Parliament has two houses: a Senate numbering 102 members appointed for life, and a House of Commons numbering 262 members apportioned according to provincial population. Elections are held at least every five years or whenever the party in power is voted down in the House of Commons or considers it expedient to appeal to the people. The Prime Minister is the leader of the majority party in the House of Commons. Laws must be passed by both houses of Parliament and signed by the Governor General in the Queen's name. Results of Parliamentary elections on June 27, 1949, were as follows: Liberals, 193; Progressive Conservatives, 42; Co-operative Commonwealth Federation, 12; Social Credit, 10; independents, 5.

The members of the Cabinet (June 1953) include Louis St. Laurent (Prime Minister), L. B. Pearson (External Affairs), W. McL. Robertson (Minister without Portfolio), Alphonse Fournier (Public Works), Lionel Chevrier (Transport), Milton Gregg (Labor), Stuart Garson (Justice, Attorney General), James Sinclair (Fisheries), C. D. Howe (Trade and Commerce, Defense Production), J. G. Gardiner (Agriculture), J. J. McCann (National Revenue), George Prudham (Mines and Technical Surveys), P. J. Martin (Health and Welfare), Alcide Côté (Postmaster General), D. C. Abbott (Finance), Brooke Claxton (Defense), Hugues Lapointe (Veterans Affairs), R. H. Winters (Reconstruction, Resources and Development), Walter Harris (Citizenship and Immigration), Gordon Bradley (Secretary of State) and Ralph Campney (Solicitor General).

The ten provincial governments are nominally headed by Lieutenant Governors appointed by the federal Government, but the executive power in each actually is vested in a cabinet headed by a prime minister, who is leader of the majority party. In nine of the ten provinces the legislature is composed of a one-house assembly elected by the people for 4 years.

In Quebec there is a second chamber, the Legislative Council, composed of nominees of the Provincial Government.

## PROVINCES AND TERRITORIES

Province	Land area, sq. mi.	Population June 1952 Est.
Alberta	248,800	970,000
British Columbia	359,279	1,198,000

<sup>\*</sup> Commissioner.

**JUDICIAL SYSTEM.** The judicial system consists of a supreme court in Ottawa (established in 1875), with appellate jurisdiction, and a supreme court in each province as well as county courts with limited jurisdiction in most of the provinces. The Governor General in Council appoints the judges of these courts.

**DEFENSE.** Canadian armed forces, consisting of the Army, Royal Canadian Air Force and the Royal Canadian Navy, are under the Ministry of National Defense. Conscription was in effect during World War II, but most of the nearly 300,000 men who saw overseas service were volunteers. Canadian casualties were 104,125, including 41,371 dead.

On May 31, 1952, the strength of the army was 49,983; air force 33,924; navy 13,927. Increases were projected under a defense expansion program. Canadian troops and ships served in Korea. On Jan.

1, 1953, the navy had in active service and reserve one light aircraft carrier, 2 cruisers, 11 destroyers, 24 frigates and numerous ancillary craft.

The Royal Canadian Mounted Police is the constabulary maintained by the federal government. Its strength on March 30, 1952, was 4,517 men. Among its duties are the enforcement of smuggling laws, suppression of traffic in drugs, protection of government buildings and dockyards, and counter-subversive work. It is the sole police force operating in the Northwest Territories and Yukon.

**EDUCATION.** Control of education was specifically delegated to the provinces by the British North America Act of 1867. Elementary schools in all provinces except Quebec are free, as is secondary education in most provinces. The supreme education authority in Quebec is a council of public instruction with two aides supervising the Roman Catholic and Protestant schools respectively. Fees paid by parents having children of school age help defray the cost of education. In the rest of the provinces the system is non-denominational, and education for the most part is compulsory for all children between the ages of 8 and 14. Of Canada's 18 universities, 6 are state-controlled and 12 are independent of provincial control. Leading universities are Toronto, which belongs to the first group, and McGill (Montreal), which belongs to the second group.

**VITAL STATISTICS.** In 1952 the birth rate was 27.4 per 1,000 population, the death rate 8.6 per 1,000.

The immigration movement reached its peak in 1913, when 402,432 immigrants were enumerated. Immigration fell off sharply during World War I but rose in the postwar years to a peak of 187,723 in 1929. Immigration for the year 1952 was 164,498, of which number 45,255 came from the United Kingdom.

**AGRICULTURE.** Agriculture, including horticulture, fruit-growing and the raising of stock and poultry, is the largest single industry. Of the total land area, 549,660 square miles, or 15.2 per cent, consists of agricultural land. Canadian farming is based almost entirely on relatively small individual holdings. Canada is one of the world's greatest wheat-exporting countries; production is concentrated in Manitoba, Saskatchewan and Alberta. Canada is also a leading producer of other cereals, the most important in point of value being oats and barley.

Apple growing, carried on in Nova Scotia, southern Quebec and central Ontario, is the chief horticultural activity; other fruit growing regions are the Niagara and Lake Erie districts and southern British Columbia. Sugar beet cultivation is assuming in-

## CROP ACREAGE AND PRODUCTION

(in thousands, provisional figures)

	Acres		Bushels	
	1951	1952	1951	1952
Wheat	25,731	25,995	552,657	687,922
Oats	12,065	11,062	488,191	466,805
Barley	8,036	8,477	245,218	291,379
Rye	1,127	1,257	17,647	24,557
Corn	300	339	15,915	19,722

creasing importance, and tobacco is produced in southern Ontario. The production of honey and maple sugar is also important. The estimated value of field crops in 1952 was \$2,120,994,000 (preliminary).

Stock raising and dairy farming have grown greatly since 1920. Ontario and Quebec are the most important dairying provinces. On June 1, 1952, Canada had 9,172,700 cattle, 5,741,000 hogs, 1,582,000 sheep and 1,180,400 horses. Dairy production in 1952 included butter, 140,373 short tons; milk, 8,887,491 tons; cheese (cheddar), 33,282 tons. Wool production was 7,691,000 pounds, greasy basis.

**INDUSTRY.** Canadian manufactures rely mainly on domestic raw materials; growing industries which depend largely on materials imported in a raw or semi-finished state include the manufacture of automobiles, sugar and rubber goods as well as the iron and steel industry in Nova Scotia, Quebec and Ontario. The latter two provinces account for more than 80 per cent of all manufactures. The abundance of cheap water power is one of the chief factors in the growth of Canadian industry. Production of steel ingots and castings in 1952 was 3,721,692 short tons; pig iron, 2,682,065 tons; ferroalloys, 232,036 tons. In 1950, the gross value of manufactured products was Can.\$13,813,524,000; there were 35,942 plants which employed 1,183,297 persons. The most important industries by value of output were pulp and paper, meatpacking, nonferrous-metals smelting and refining, sawmills and electrical apparatus.

**TRADE.** Canada is one of the great trading nations of the world. The bulk of its foreign commerce is in raw or semi-finished products.

Trade statistics (in millions of Canadian dollars):

Year	Imports	Exports	Re-exports
1942	1,644.2	2,363.8	21.7
1943	1,735.1	2,971.5	29.8
1944	1,758.9	3,440.0	43.1
1945	1,585.8	3,218.3	49.1
1946	1,927.3	2,312.2	27.0
1947	2,573.9	2,774.9	36.9
1948	2,636.9	3,075.4	34.6
1949	2,761.2	2,993.0	29.5
1950	3,174.3	3,118.4	38.7
1951	4,084.9	3,914.5	48.9
1952	4,030.5	4,301.1	54.9

In 1952, Canada's principal customers were the U. S. (54%), Britain (18%), Belgium (2.5%), Japan (2.4%) and western Germany (2.2%). Leading suppliers were the U. S. (74%), Britain (8.9%), Venezuela (3.4%), Brazil (0.9%) and Belgium (0.8%). The leading exports were wheat (15%), newsprint (14%), other grains (9%), wood and manufactures (10%) and wood pulp (7%). Leading imports were machinery and vehicles (22%), iron, steel and manufactures (11%) and petroleum and products (9%).

**COMMUNICATIONS.** Because Canada's exports are to a large extent bulky raw materials, cheap water transportation is essential. The country's system of canals, especially those connecting the Great Lakes, forms an integral part of the inland communications system. Canal traffic amounted to 31,354,139 short tons in 1952; 17,910,756 tons of freight were carried on the Welland Canal alone.

Railway facilities have been improved in relation to the export of wheat from the prairie provinces and to the development of the mineral and wood pulp industries in northern Quebec and northern Ontario. About 90 per cent of the Canadian railway length of 43,000 miles is under the control of two systems, the government-owned Canadian National and the privately-owned Canadian Pacific. Canada's principal merchant marine lines are the Canadian Pacific, which operates a subsidiary ocean steamship company, and the Canadian National, which has minor steamship lines under its control. The merchant marine on Dec. 31, 1952, numbered 1,316 steamers and motorships (of over 100 tons) with tonnage of 1,733,013.

On March 31, 1951, Canada had 166,899 miles of surfaced highways and 400,256 miles of nonsurfaced roads. On April 3, 1946, Canada formally took over 1,500 miles of the Alaska highway. Motor vehicles licensed in 1951 numbered 2,872,420.

The Trans-Canada Air Lines, established in 1937, is controlled by the federal government. In 1952, Canadian airlines carried 2,304,438 revenue passengers and flew 805,508,855 passenger miles. In 1952, Canada had 3,140,000 telephones and 2,313,944 licensed private radio sets.

**FINANCE.** Recent data are as follows (in millions of Canadian dollars):

	1951-52	1952-53*	1953-54†
Revenue	3,980.9	4,374.6	4,473.0
Expenditure	3,732.9	4,326.8	4,462.0

\* Provisional. † Budget estimate.

The net public debt (gross debt less active assets) on Mar. 31, 1953, was reported at \$11,137,500,000, compared to \$11,185,281,546 on Mar. 31, 1952, \$11,433,314,948 on Mar. 31, 1951, and \$3,648,691,449 on Mar. 31, 1941.

**TOPOGRAPHY.** Covering the northern part of the North American continent and with an area larger than that of the United States, Canada's topography is extremely diversified. The northeastern region, including most of Quebec, northern Ontario and Manitoba, and the Northwest Territories, with Hudson Bay in the center, is an important source of minerals, wood pulp and water power. In the east the mountainous maritime provinces have an irregular coast line on the Gulf of St. Lawrence and the Atlantic. The St. Lawrence plain, covering most of southern Quebec and Ontario, and the interior continental plain, covering southern Manitoba and Saskatchewan and most of Alberta, are the principal cultivable areas. They are separated by a forested plateau rising from Lakes Superior and Huron. Westward toward the Pacific, most of British Columbia, Yukon, and part of western Alberta are covered by parallel mountain ranges including the Rockies. The Pacific border of the coast range is ragged with fiords and channels. The highest point in Canada is Mt. Logan, 19,850 ft., located in the Yukon.

**CLIMATE.** Canada has great variations of climate. South of the Gulf of St. Lawrence, the maritime provinces have an average temperature of 40° for the year and over 60° for the summer months. In Quebec and northern Ontario the winters are cold and the summers average from 60° to 65°. In southern Ontario the average summer temperature is 65°, with an occasional rise to 90°. The prairie provinces have a distinctly continental climate with comparatively short warm summers and long cold winters. The west coast has a climate similar to that of the southern coast of England. Northwest and northeast of Hudson Bay the climate is too severe for trees.

**HYDROGRAPHY.** Canada has an abundance of large and small lakes. In addition to the Great Lakes on the United States border, there are nine others which are more than 100 miles long and 35 which are more than 50 miles long.

The two principal river systems are the Mackenzie and the St. Lawrence. The St. Lawrence with its tributaries is navigable for over 1,900 miles and is the commercial artery of eastern Canada. The northern parts of Alberta and much of northern British Columbia are drained through the Athabaska and Peace Rivers, first northeastward toward Lake Athabaska and then north through Slave River to Great Slave Lake and finally northwest through the Mackenzie River to the Arctic Ocean. If measured to the head of Finlay River, the Mackenzie has a length of more than 2,500 miles and is navigable for 1,292 miles.

As most of the Canadian rivers have waterfalls on their courses they are of considerable importance as sources of power.

Average monthly production of electricity in 1952 was 5,149,000,000 kwh.

**MINERALS.** Canada's mineral resources are both rich and varied. Mining production in 1952, was valued at \$1,278,365,516. Metals come mainly from two widely separated regions, the mountain ranges of the Pacific coast and the province of Ontario. Copper ore also exists in Quebec, Manitoba and Newfoundland. Production of petroleum (60,864,500 barrels in 1952) centers in Alberta. There are important deposits of uranium in the Northwest Territories.

### MAJOR MINERALS

Mineral	1951	1952*
Asbestos (tons)	973,198	966,382
Coal (tons)	18,586,823	17,360,000
Copper (lb.)	539,941,589	515,413,485
Gold (oz.)	4,392,751	4,419,570
Lead (lb.)	316,462,751	329,758,679
Nickel (lb.)	275,806,272	280,013,300
Silver (oz.)	23,125,825	24,375,853
Zinc (lb.)	682,224,335	764,112,772

\*Provisional.

### FORESTS, WILD LIFE AND FISHERIES.

The total area of land covered by forests is estimated at 1,290,960 square miles, of which 435,000 are productive and accessible. Production of sawn lumber was estimated at 6,783,000,000 bd. ft. in 1952. The manufacture of pulp and paper is one of the leading industries. Newsprint production in 1952 was estimated at 5,687,051 tons; exports were 5,327,430 tons, of which 4,850,962 tons went to the U. S.

Fishing, Canada's oldest industry, is carried on along the Atlantic and Pacific coasts and on the inland lakes. The most important fish are salmon, cod, herring, mackerel, lobsters, sardines, halibut, haddock, whitefish and trout. The total value of fishery production in 1951 (excluding Newfoundland) was \$175,903,385; the catch totaled 13,499,410 cwt.

Fur farming and trapping is also important. Trapping is carried on principally in the North while Quebec, Ontario and Alberta lead in the number of fur farms. The more important animals raised on fur farms are fox, muskrat, beaver, mink, raccoon and martin. For the year ending June 30, 1951, 7,479,272 pelts valued at \$31,134,400 were taken. Annual fur auctions are held at Montreal, Winnipeg, Vancouver, Edmonton and Regina.

### FALKLAND ISLANDS AND DEPENDENCIES—Status: Crown Colony.

Governor: Sir Miles Clifford.

Capital: Stanley (population 1,246).

Foreign trade (1952): exports, £4,403,292; imports, £3,068,482. Chief export: whale oil.

This sparsely inhabited Crown colony consists of a group of islands in the south

Atlantic about 250 miles east of the South American mainland. Dependencies include all islands and Antarctic territory between 20° and 50° w. long., south of 50° s. lat., and between 50° and 80° w. long., south of 58° s. lat. The chief industry is sheep raising, and apart from the production of wool, hides and skins and tallow, there are no known resources. The whaling industry is carried on successfully from South Georgia Island; 233,518 barrels of whale oil were produced in 1952.

The islands were discovered by John Davis in 1592. East Falkland Island was claimed for France in 1764, and West Falkland Island for Britain the following year. The French settlement later passed to Spain, and in 1829 was colonized by Argentina. The Argentines were ejected by the British in 1833 and have since reasserted their claim to the islands many times. In 1914 the Battle of Falkland Islands was fought nearby, resulting in a British victory. During World War II, Stanley, the only town, was an important naval base.

The climate is equable though relatively cold, with temperatures averaging about 47° in midsummer and 37° in midwinter.

### JAMAICA AND DEPENDENCIES—Status: Colony.

Capital: Kingston (population 201,911).

Governor: Sir Hugh Foot.

Foreign trade (1952)\*: exports, £17,957,832; imports, £35,313,758. Chief exports: sugar, bananas, rum.

Agricultural products (1952): sugar (265,872 long tons), bananas (6,250,000 stems), rum (2,800,971 gal.), citrus fruits, ginger, coffee, pimento.

\* Excluding dependencies.

Jamaica, the largest island in the British West Indies (4,470 sq. mi.), is eighty miles south of the eastern end of Cuba. Its island dependencies include the Turks and Caicos Islands (about 600 mi. N.E.), Cayman Islands (about 300 mi. N.W.) and two uninhabited cays. It was discovered by Columbus in 1494 and remained in Spanish possession until 1655, when it was taken by the British. According to the constitution of Nov. 20, 1944, the Governor is assisted by a House of Representatives of 32 popularly elected members; a Legislative Council (upper house) of 15 members and an Executive Council of 10 members, 5 of whom are elected by the House of Representatives.

Sites were leased for 99 years to the U. S. in 1940 for naval and air bases.

The colony's economy depends on agriculture, and about 200,000 acres are under cultivation. Sugar took the place of bananas as the chief crop during World War II. Jamaica is virtually the sole source of pimento. Manufacture of consumer's goods has increased considerably in recent years.

Rail mileage totals 299, and highways 4,594. Jamaica's favorable climate makes it attractive to tourists. Temperatures at Kingston range from about 71° to 88°, but are considerably cooler inland. The rainy seasons are in May and October.

**LEEWARD ISLANDS**—Status: Colony. Capital: St. John's (population 10,000). Governor: Sir Kenneth Blackburne. Foreign trade (1951): exports, BWI\$10,-298,192; imports, BWI\$13,453,135. Chief export: sugar.

Agricultural products: sugar, cotton, coconuts, citrus fruits, tobacco.

The Leeward Islands constitute a federated group southeast of Puerto Rico; they are divided into four presidencies—Antigua (108 sq. mi.) and dependencies (63 sq. mi.); Virgin Islands (67 sq. mi.); St. Kitts (68 sq. mi.) and Nevis (50 sq. mi.) and dependency (34 sq. mi.); and Montserrat (33 sq. mi.). The whole federation has a nominated Executive Council and a partially elected Legislative Council. Each presidency also has a local administration. In 1940, the U. S. acquired a 99-year lease on sites for a naval and air base on Antigua. The islands are agricultural.

Temperatures average about 76° in January and 81° in August; rainfall is moderate throughout the year.

**TRINIDAD AND TOBAGO**—Status: Colony.

Capital: Port of Spain (population 111,350).

Governor: Maj. Gen. Sir Hubert Rance. Foreign trade (1952): domestic exports, BWI\$223,334,161; re-exports, BWI\$7,125,977; imports, BWI\$243,939,897. Chief exports: petroleum (75%), sugar (9%).

Agricultural products: sugar (1951: 140,-668 long tons), cacao, coconuts.

Minerals: petroleum (1952: 22,100,000 barrels), asphalt (1951: 154,705 long tons).

The islands of Trinidad and Tobago are 16 and 21 miles, respectively, off Venezuela just north of the Orinoco delta. Both were discovered by Columbus in 1498, and remained Spanish possessions until 1797, when the British took them. They are administered by a governor. In 1941 the United States was granted 99-year leases on the islands for naval and air bases covering a total of 25,000 acres.

The soil is rich for the growing of tropical products; sugar and cacao are the principal crops. Trinidad is one of the leading oil producers of the Commonwealth, and the world's most notable source of asphalt, found in Pitch Lake, thirty-eight miles southeast of Port of Spain. Port of Spain is the chief port, and a transshipment point for Orinoco trade. About a third of the population of the Colony is East Indian.

Trinidad's climate is tropical, with a mean annual temperature of 80°. The

rainy season is from May to January (except October).

**WINDWARD ISLANDS**—Status: Colony. Capital: St. George's (population 5,755). Governor: Edward Beetham.

Foreign trade (1951): exports, BWI\$13,-850,147; imports, BWI\$23,681,657.

Agricultural products: arrowroot (St. Vincent), nutmeg (Grenada), mace (Grenada), cacao.

These islands, four in number, form the southern portion of the Lesser Antilles in the Caribbean; they extend approximately 250 miles from the French colony of Guadeloupe on the north to the British colony of Trinidad on the south. Their total area of about 820 square miles divides as follows: Dominica, 304; St. Lucia, 233; St. Vincent, 150; Grenada, 133. The four units are not federated and have no common legislature or laws, although they do have a common governor.

More than two-thirds of the inhabitants are Negroes, nearly one-third mulatto, and about 2 per cent white. Agriculture is the only industry. St. Vincent has a virtual monopoly on the world supply of arrowroot, and Grenada furnishes about 40 per cent of the world's nutmeg.

Climate is pleasant, although rainfall is heavy, particularly in summer. The temperature in January averages 77°, in September, 80°.

## ASIA

**ADEN**—Status: Colony and Protectorate. Governor: Sir Tom Hickinbotham.

Foreign trade (1952): exports, 431,370,-524 East African shillings; imports, 1,129,-490,160 shillings.

The British colony and protectorate of Aden is situated on the volcanic southern tip of the Arabian peninsula, along the Gulf of Aden. The colony (port) of Aden was annexed to Britain in 1839 and was part of the Bombay Presidency until 1932, when it became a separate province with the chief commissioner responsible to the Indian government. In 1937 it was transferred from Indian to Imperial control as a Crown colony. It is administered by a governor and commander in chief aided by an Executive Council. The 20-odd sultans who rule their respective territories in the protectorate are responsible to him.

The island of Perim (5 sq. mi.), the Kuria Muria islands, and the island of Kamaran (22 sq. mi.) are attached administratively to Aden.

Aden colony is essentially a transshipment point and bunkering station and is also the commercial center for the Yemen and the African coast opposite. Aden airport is a station on the Khartoum-Karachi air route. Agriculture is unimportant except for some coffee and tobacco, and manufactures are limited to salt, cigarettes and native dhows.

**BAHREIN ISLANDS**—Status: Protectorate and Sheikdom.

British Political Agent: W. S. Laver.

These islands form an archipelago off Arabia's east coast and are nominally an independent sheikdom, ruled by Sheik Sir Salman bin Hamad al Khalifah, but are actually a protectorate of Great Britain, which is represented by a political agent. They are the center of the Persian Gulf pearl fisheries and the site of an airport on the London-Australia route. The concession for exploitation of petroleum deposits, discovered in 1932, is held by an affiliate of U. S.-owned interests. Output in 1952 was 11,004,278 barrels. Production at the Bahrain refinery in the same year was 69,971,879 barrels. Agriculture is of some importance. Most of the trade of the Saudi Arabian provinces of Nejd and Hasa pass through Bahrain. Chief exports are rice, cotton goods, pearls, coffee and tea. The capital and principal port is Manama (pop. 30,000) on Bahrain.

## BORNEO

**COLONY OF NORTH BORNEO**—Status: Colony.

Capital: Jesselton (population 37,511).

Governor: Roland E. Turnbull.

Foreign trade (1952)\*: exports, Str.\$63,-100,119; imports, Str.\$70,320,069. Chief export: rubber (62%).

Agricultural products: rubber (1952: 19,094 long tons), rice, copra.

Forest products: timber, cutch, rattans.

\* Including transit trade.

The Colony of North Borneo, constituting the extreme northern portion of the island of Borneo, consists largely of highlands and occasional open valleys and plateaus. The territory was a British protectorate administered under a royal charter by the British North Borneo Company from 1881 until July 15, 1946, when it assumed the status of a Crown colony. It was occupied by Japanese troops from 1942 until 1945. Labuan (pop. 9,000; area, 30 sq. mi.), a small island off the North Borneo coast, was transferred from the jurisdiction of the Straits Settlements to that of North Borneo in 1946.

The population is comprised largely of aboriginal tribesmen living on a very primitive level of culture and social organization. Mineral resources are believed to be considerable, but the colony's income is based on agricultural and jungle produce.

The climate of North Borneo is tropical, with a mean annual temperature range of only 3°, although extremes of 64° and 91° have been recorded. The total rainfall varies between 60 and 180 inches annually and is heaviest in the last three months.

**BRUNEI**—Status: Protectorate.

Capital: Brunei (population 16,000).

Sultan: Omar Ali Saifuddin.

British Resident: J. C. H. Barcroft.

Foreign trade (1951): exports, Str.\$271,-838,938; imports, Str.\$50,358,830. Chief export: petroleum (97%).

Agricultural products: rice, rubber.

Brunei lies on the northwestern coast of Borneo, entirely surrounded by Sarawak. It was placed under British protection in 1888, and in 1906 a treaty was concluded whereby the native sultan yielded administration of the state to a British resident. The governor of Sarawak was appointed high commissioner for Brunei in 1948. Japanese troops occupied Brunei from 1942 until 1945.

Most of the inhabitants are Malays. The bulk of the population lives in and around the capital, situated on the Brunei River 9 miles from its mouth. The interior is largely forested and contains rich timber. All petroleum is exported to Sarawak for refining; exports in 1951 amounted to 4,895,640 long tons.

Brunei's climate is comparable to that of North Borneo, except that the wet season is longer, often lasting until March.

**SARAWAK**—Status: Colony.

Capital: Kuching (population 37,949).

Governor: Sir Anthony F. Abell.

Foreign trade (1952): exports, Str.\$438,-563,317; imports, Str.\$382,945,953. Chief exports: petroleum (70%), rubber (15%).

Agricultural products: rubber (1952: 31,471 long tons), pepper, copra, rice.

Minerals: petroleum, gold, silver, coal.

Sarawak extends along the northwestern coast of Borneo for about 500 miles. In 1841 part of the present territory was granted by the sultan of Brunei to Sir James Brooke. The state, enlarged by additional concessions made between 1861 and 1905, continued to be ruled by members of the Brooke family until the Japanese occupation in Dec., 1941. A British protectorate since 1888, Sarawak became a Crown colony July 15, 1946, through agreement between the British government and the then ruling rajah, Sir Charles Vyner Brooke.

The colony is mountainous and very well watered; inland communication is largely by water. Most of the inhabitants are Malays, Dyaks and Chinese. The principal mineral is petroleum, which was discovered at Miri in 1909 and subsequently worked by Sarawak Oilfields, Ltd. A large proportion of the petroleum exports reflects petroleum imported from Brunei and refined in Sarawak. There are also important forest resources. Under the enlightened rule of the Brookes, Sarawak was developed into a highly organized community.

Sarawak's climate, though tropical, is healthful; the temperature seldom rises above 90° and falls to 70° at night. Average annual rainfall at Kuching is 160 inches.

## Ceylon

(Member of British Commonwealth)

Area: 25,332 square miles.

Population (census 1953): 8,103,648 (1946: Sinhalese, 68%; Tamil, 22%; Moors, 6%; Burghers and Eurasians, .5%; Europeans [5,292] and others, 3.5%).

Density per square mile: 319.9.

Governor General: Lord Soulbury.

Prime Minister: Dudley Senanayake.

Principal cities (census 1953): Colombo, 424,816 (capital); Jaffna, 76,664 (fibers, tobacco); Kandy, 57,013 (tea); Galle, 55,825 (seaport).

Monetary unit: Ceylonese rupee.

Languages: English, Sinhalese, Tamil.

Religions (est.): Buddhism, 60%; Hinduism, 20%; Christianity, 10%; Mohammedanism and others, 10%.

**HISTORY.** The island of Ceylon lies in the Indian Ocean 12 miles southeast of the southern tip of India. Known to the Greeks and Romans as Taprobane and to Mohammedan seamen as Serendib, it is reputed to have been invaded from India in 504 B.C. by Vijaya, the first Sinhalese king. Buddhism was introduced in the third century B.C. In subsequent centuries the island was invaded and occupied several times by Indian princes.

Ceylon was visited in 1505 by the Portuguese, who found the island divided into seven native kingdoms. The Portuguese settlers were ousted in the middle of the 17th century by the Dutch, who in turn were defeated by an English force in 1796. Ceylon became a Crown colony in 1796, and was formally ceded to England by the treaty of Amiens in 1802.

The Donoughmore constitution of 1931 vested control over most local affairs in a state council, which had an elected majority. The arrangement proved generally unacceptable, and after World War II a commission headed by Lord Soulbury drafted a new constitution. Elections held in Aug. and Sept., 1947, were won by the United Nationalists, a center group. The Ceylon Independence Act received royal assent on Dec. 10, 1947, and on Feb. 4, 1948, Ceylon became a full-fledged, self-governing dominion, with Stephen Senanayake as prime minister. On his death, Mar. 22, 1952, his son Dudley took office.

**GOVERNMENT.** Under the new constitution, Ceylon's government is headed by the Crown-appointed governor general, who is advised by a council of ministers headed by the prime minister. The bicameral parliament consists of a House of Representatives of 101 members (95 elected by full adult suffrage), and a Senate composed of 15 elected and 15 appointed members.

Elections of May 1952 returned to the House of Representatives 54 United Nationalists, 11 Independents, 3 Communists,

4 Tamil Congress, 2 Federalists, 1 Republican, 1 Labour and 19 others.

Close relations in defense matters are maintained with the United Kingdom under terms of the 1947 defense agreement, which permits the stationing of British troops on the island. The Royal Navy has an extensive base at Trincomalee.

**SOCIAL AND ECONOMIC CONDITIONS.** Free education is available in public schools from kindergarten to university, and the level of literacy is high. In 1949 there were 5,610 Sinhalese and Tamil schools, with 1,010,184 pupils and 631 English and bilingual schools with 237,678 pupils. The University of Ceylon (founded in 1942) had 1,850 students in 1949-50.

Sinhalese, spoken by approximately two-thirds of the population, is an Aryan tongue closely related to Pali.

Ceylon is heavily dependent on food imports, particularly rice, the staple food. A large part of the cultivated land (25% of the total area) is devoted to the chief export crops—tea (1952: 143,760 metric tons), rubber (1952: 98,080 tons) and coconut products, all of which are grown for the most part on plantations. Other crops include rice (393,970 tons paddy), fruits, cinnamon and citronella. In 1952, there were 1,188,769 cattle, 627,072 buffalo and 445,664 goats.

Recent foreign-trade data are as follows (in millions of Ceylonese rupees):

	1950	1951	1952
Exports	1,563	1,904	1,502
Imports	1,167	1,559	1,705

Chief exports by value in 1952 were tea (48%), rubber (25%) and coconut products (14%). Leading customers were Britain (30%), the U. S. (11%) and China (9%); leading suppliers, Britain (22%), India (13%) and Burma (11%).

Ceylon is well served by highways and the government railway, which total 18,560 and 894 miles respectively. A fast ferry connects railheads in India and Ceylon.

Recent financial data are as follows (in millions of Ceylonese rupees):

	1950-51*	1951-52†	1952-53†
Revenue	814.4	910.4	904.2
Expenditure	930.4	1,263.1	1,310.3

\* Revised estimate. † Budget estimate.

The net public debt on Sept. 30, 1952, was 797,900,000 rupees.

**NATURAL FEATURES AND RESOURCES.** Most of the island is flat, but mountains in the south central part rise to 8,000 feet. The island extends to a maximum of 270 miles north and south, and 140 miles east and west. There are numerous rivers, the longest of which is the Mahaweli-Ganga (206 miles).

Mineral resources include graphite (plumbago) (1952 exports: 7,659 metric tons), gem stones, mica, magnesite and vanadium; uranium deposits have been reported.

A distinctive feature of Ceylon's climate is the monsoon, which appears in May and in October–November. Annual rainfall varies from 40 inches in the northeast to more than 200 in the southwest. The mean annual temperature at Colombo is 80.5°.

#### CYPRUS—Status: Colony.

Capital: Nicosia (pop. 1952: 39,980).

Governor: Robert P. Armitage.

Foreign trade (1952): exports (including re-exports), £18,099,980; imports, £20,374,766. Chief export: copper concentrates.

Agricultural products: barley, wheat, potatoes, wine, fruit.

Minerals: copper ore (concentrates), pyrite ore.

Cyprus, third largest island in the Mediterranean, is roughly equidistant from Asia Minor to the north and Syria to the east. The site of early Phoenician and Greek colonies, it passed in 1571 from the rule of Venice to that of the Ottoman Empire, under which it remained until 1878, when it was ceded to Great Britain for administrative purposes. On the outbreak of hostilities with Turkey in World War I (Nov. 5, 1914), the island was formally annexed to Great Britain.

The governor is advised by a nominated Executive Council, but he alone possesses the lawmaking power.

The people are mainly Greeks and Turks, although there is an Armenian colony and a distinct, though small, Latin colony. More than 80 per cent of the population is Christian. Agriculture is the principal industry. Sponge fishing is also important, as well as copper mining.

The mean annual temperature is about 69°; annual rainfall averages about 19 inches. A cool, wet season lasts from October to March.

#### HONG KONG—Status: Colony.

Capital: Victoria (population 767,000).

Governor: Sir Alexander Grantham.

Foreign trade (1952): exports (in Hong Kong dollars), \$2,899,010,000; imports, \$3,779,487,000. Chief export: textiles.

Agricultural products: rice, sugar cane. Major industries: shipbuilding, rope making, cement, sugar refining, textiles.

The colony of Hong Kong comprises the island of Hong Kong (32 sq. mi.), Stonecutters' Island, and the Kowloon peninsula and the New Territories on the adjoining mainland. The island of Hong Kong, located at the mouth of the Canton River about 90 miles southeast of Canton, was ceded to Britain in 1841.

Stonecutters' Island and Kowloon were annexed in 1860, and the New Territories,

which are mainly agricultural lands, were leased from China in 1898 for 99 years. Hong Kong was attacked by Japanese troops Dec. 7, 1941, and surrendered the following Christmas Day. It remained under the occupation of the Japanese until Sept., 1945.

Possessing an excellent natural harbor 17 miles in extent, the only safe deep-sea anchorage between Shanghai and Indo-China, Hong Kong is the entrepôt for trade throughout southern China and the western Pacific. Re-exports normally constitute about two-thirds of the imports and nine-tenths of exports. The Colony is also a very important British military and naval base.

The cities of Victoria and Kowloon contain the greater part of the population, which is overwhelmingly Chinese. Besides those Chinese engaged in agriculture or industry, a large population lives in sampans or junks either in Victoria Harbour or neighboring bays, supporting itself by fishing or by laboring on the wharves. About 20 per cent of the total area of Hong Kong is under cultivation, mostly in the New Territories. Manufacture of consumer's goods, both for local consumption and for export, is also important.

Hong Kong has an agreeable climate, although violent typhoons sometimes descend upon the Colony. The average annual temperature is 72°, ranging from 59° in February to 82° in July. The summer is the rainy season.

#### MALAYAN FEDERATION and SINGAPORE—Status: Protectorates and Crown Colony.

Capital: Singapore (population 1947: 441,885).

Federation Capital: Kuala Lumpur (population 1947: 176,195).

Commissioner General in Southeast Asia: Malcolm Macdonald.

High Commissioner of Malayan Federation: Gen. Sir Gerald Templer.

Governor of Singapore: John F. Nicoll.

Foreign trade (1952): exports, Str.\$3,918,503,160; imports, Str.\$3,873,142,451. Chief exports: rubber (48%), tin (13%).

Agricultural products: rubber (1952: 583,000 long tons), rice, coconuts.

Minerals: tin ore (1952: 56,838 long tons), iron ore (1,056,000 tons), tungsten, bauxite, manganese ore, coal.

Forest products: timber, damar, jelutong.

The Federation consists of semi-independent states occupying most of the Malay peninsula and the island of Singapore off the peninsula's southern tip, together with several smaller islands. The native states were brought under British administration by a process of commercial and political exploitation in the late 19th and early 20th centuries. Singapore, founded in 1819 by Sir Stamford Raffles,

had been developed into the principal British naval base in the Far East prior to World War II. Japanese troops invaded the Malayan States in December, 1941, and captured Singapore from the mainland February 15, 1942.

By Orders in Council effective April 1, 1946, the Malayan Union was formed from—the former "Federated Malay States" Perak, Pahang, Selangor, Negri Sembilan—the former "Unfederated Malay States"—Johore, Trengganu, Kelantan, Kedah and Perlis—and all parts of the former "Straits Settlements" except Singapore—thus including Penang and Malacca. The small island of Labuan, off Borneo, was transferred to jurisdiction of North Borneo. The Crown colony of Singapore, comprising the island of Singapore and its dependency, Christmas Island, remained outside the Malayan Federation. The Cocos or Keeling Islands, a former dependency, were transferred to Australian control in 1951.

After vigorous opposition, this arrangement was modified on Feb. 1, 1948, and the Malayan Union was replaced by the Malayan Federation, which has a federal executive and a federal legislative council presided over by the high commissioner. British influence in the affairs of the nine native states is limited to defense and foreign affairs. The sultan of each state has undertaken to promulgate a written constitution for his state. Singapore remains a Crown Colony.

The Commissioner General in Southeast Asia is charged with the coordination of administration in the Malayan Federation, Singapore, Sarawak, North Borneo and Brunei.

Since June, 1948, a considerable number of British and other troops have had to be stationed in the area to cope with Communist-led guerrillas. About 50 per cent of the population of the Federation is Malayan and 38 per cent Chinese; about 70 per cent of the population of the colony of Singapore is Chinese.

Rubber and tin form the basis of the area's prosperity. Over 60 per cent of the cultivable area is devoted to the growing of rubber, and prewar production accounted for 40 per cent of the world supply. Production recovered rapidly after the war. In 1940 Malaya produced 33.2 per cent of the world's output of tin; postwar recovery of the industry was slower than in the case of rubber, although by 1949 Malaya was again the world's chief producer of tin.

The climate of Singapore, principal city of the area, is hot and humid, with practically no seasonal change; mean average temperature is 80°. The average number of rainy days is about 173.

## India (Republic)

Area: 1,221,072 square miles (including Kashmir, 82,258 square miles).

Population (census 1951)\*: 356,891,624† (Hindu [predominant], Moslem, Sikh, Christian, Buddhist).

Density per square mile: 313.4‡

President: Rajendra Prasad.

Prime Minister: Pandit Jawaharlal Nehru.

Principal cities (census 1951)\*: Bombay, 2,840,011 (seaport; cotton and textiles); Calcutta, 2,549,790 (chief port); Madras, 1,429,985 (seaport); Hyderabad, 1,085,074 (trade center); Delhi, 914,634 (manufacturing); Ahmedabad, 788,310 (manufacturing); Bangalore, 726,170 (manufacturing); Kanpur (Cawnpore), 704,536 (textiles); New Delhi, 279,063 (capital).

Monetary unit: Rupee.

Principal languages: English (official), Hindi, Marathi, Gujarati, Punjabi, Telugu, Bengali, Tamil, Kanarese.

\* Provisional. † Excluding Kashmir (est. 1950: 4,370,000) and tribal areas of Assam (est. 1951: 500,000). ‡ Excluding Kashmir.

**HISTORY.** The Republic of India is one of the largest, richest and most populous nations in the world. A sovereign republic within the Commonwealth of Nations, it contains most of pre-1947 India's industrial wealth and natural resources.

The Aryans or Hindus who invaded India between 2400 and 1500 B.C. from the northwest found a land already well civilized. Buddhism, founded in the 6th century B.C., had spread through northern India. The first exact date in Indian history is 327 B.C., the year that Alexander the Great invaded India. Meanwhile India continued to be divided into scores of rival states.

In 1526, Mohammedan invaders founded the great Mogul empire, centered on Delhi, which lasted at least in name until 1857. Akbar the Great (1542-1605) strengthened this empire and became the ruler of a greater portion of India than had ever before acknowledged the suzerainty of one man. The long reign of his great-grandson, Aurangzeb (1658-1707) represents both the culmination of Mogul power and the beginning of its decay.

Vasco da Gama, the Portuguese explorer, visited India first in 1498, and for the next hundred years the Portuguese had a virtual monopoly on trade with the subcontinent. Meanwhile, the English founded the East India Company, which set up its first factory at Surat in 1612 and began expanding its influence, fighting against the Indian rulers and the French, Dutch and Portuguese traders simultaneously.

Bombay, taken from the Portuguese, became the seat of English rule in 1687. The defeat of French and Mohammedan armies by Lord Clive in the decade ending in 1760 laid the foundation of the British Empire in India. From then until 1858, when the

administration of India was formally transferred to the British Crown following the great mutiny of native troops in 1857, the East India Company was constantly occupied with the suppression of native uprisings and the extension of British rule.

After World War I, in which even the Mohammedan states of India sent troops to fight beside the Allies, Indian nationalist unrest rose to new heights under the leadership of a little Hindu lawyer, Mohandas K. Gandhi, called Mahatma Gandhi. His tactics, of a politico-religious nature, called for non-violent revolts against British authority. He soon became the leading spirit of the all-India Congress Party, which was the spearhead of Indian revolt against British rule. In 1919 the British gave added responsibility to Indian officials, and by an act passed in 1935 India was given a federal form of government and a measure of self-rule.

During the 1940's the policy of both the wartime coalition government of Britain and later the Labour Government envisaged an unpartitioned India as a self-governing federal dominion including both British India and the native states. In 1942, with the Japanese pressing hard on the eastern borders of India, the British war cabinet decided to send Sir Stafford Cripps to India to try to reach a political settlement with nationalist leaders. The mission failed. Shortly thereafter the Congress Party took the position that the British must quit India. In August 1942, fearing mass civil disobedience, the Government of India carried out widespread arrests of Congress leaders including Gandhi, Jawaharlal Nehru and Maulana Abul Kalam Azad, president of the Congress Party. Sec-

tions of the nationalist movement, mostly under the leadership of the socialist wing, went underground.

Gandhi was released in May, 1944, and other leaders later. Negotiations for a settlement were resumed and they proved fruitless until the British Labour Government sent a cabinet mission to India in 1946 consisting of Lord Pethick-Lawrence, A. V. Alexander and Cripps. The mission obtained the agreement of the Congress Party and Mohammed Ali Jinnah's Moslem League to a long-term plan for a constitution based on three separate groups of provinces with a minimal center. However, agreement was not reached on an interim government and the Moslem League later reverted to its position of unconditional partition. Finally, in February, 1947, the Labour Government announced its determination to transfer power to "responsible Indian hands" by June, 1948, even if a constitution had not been worked out.

With the appointment at the same time of Lord Mountbatten as Governor General, events moved swiftly. By early June, 1947, agreement was reached on the partitioning of India along religious lines (a plan previously opposed by the predominant Hindus and by Britain) and on the splitting of the provinces of Bengal and the Punjab, which the Moslems had claimed in their entirety.

The Indian Independence Act, passed quickly by both houses of the British Parliament, received royal assent on July 18, 1947, and on Aug. 15 the Indian Empire, united under British rule for almost a century, passed into history.

Under the leadership of Pandit Jawa-

## POLITICAL SUBDIVISIONS OF REPUBLIC OF INDIA, 1953

Provinces	Area, sq. mi. (approx.)	Population, census 1951	Area, sq. mi. (approx.)	Population, census 1951
Assam	54,084	9,129,442*	Centrally administered areas	
Bihar	70,368	40,218,916	Ajmer-Merwara	2,425 692,506

\* Excluding tribal areas with estimated population of 500,000. † Estimated population 1950; status in dispute with Pakistan. ‡ Himalayan states under Indian protection.

harial Nehru, the new nation quickly took its place in world councils as a self-governing state. At home the nation pursued a policy of integration and reorganization designed to place effective power in the hands of the central government, which was faced at the outset by widespread communal rioting climaxed by the assassination of Gandhi, the great Hindu spiritual leader, on Jan. 30, 1948.

**GOVERNMENT.** Since Jan. 26, 1950, India has been a sovereign republic within the Commonwealth of Nations—a status approved by the other Commonwealth nations at London in April, 1949, on the condition that India recognize the King as head of the Commonwealth. Under the constitution adopted by the Constituent Assembly on Nov. 26, 1949, India has a parliamentary type of government. The bicameral parliament is composed of the Council of States (216 members—204 chosen by constituent states and 12 by the President) and the House of the People (497 members—489 elected directly by popular vote for 5-year terms and 8 chosen by the President). The President is elected for a five-year term by an electoral college composed of parliament and the elected members of the state legislatures. The cabinet, headed by the prime minister, administers the government and is collectively responsible to the House of the People. The constituent states have their own governors and popularly elected legislatures.

In national elections held between Oct. 1951 and Feb. 1952, the Congress party won 363 of the 489 elective seats in the House of the People, Independents 36, Communists and allies 27, Socialists 12, others 51.

**NATIVE STATES.** Most of the 560-odd native states and subdivisions of pre-1947 India acceded to the new nation, and the central government pursued a vigorous policy of integration. This took three forms: (1) merger into adjacent provinces (230 states with an area of 110,700 sq. mi. and a population of 18,200,000), (2) conversion into centrally administered areas (10 states), and (3) grouping into unions of states (304 states with an area of over 236,000 sq. mi. and population of 37,600,000) of which there are 5, in addition to the single states of Hyderabad, Mysore and Kashmir. The unions of states and the latter three states have been assimilated to the level of provinces, and have fully representative forms of government, subject to the power of the central government.

The status of the large princely state of Jammu and Kashmir on the northwest frontier is in dispute with Pakistan. It is 85 per cent Moslem, but its Hindu ruling prince acceded to India, which took over administration following invasion by Mos-

lem troops in late 1947. The U. N. Security Council voted on April 21, 1948, to hold a plebiscite in the area, but, largely because of mutual distrust between India and Pakistan, arrangements have not been made for holding it.

**DEFENSE.** In the division of the British Indian Army after the transfer of power, India received 45 regiments approximating 250,000 men. Plans were announced late in 1950 to reduce the strength of the then 300,000-man army, the reduced force to be highly mobile.

The division of the Royal Indian Air Force gave India 1 transport and 7 fighter squadrons. The Indian navy has 1 cruiser (ex-H.M.S. *Achilles*), 3 destroyers, 4 sloops, 2 frigates, 12 minesweepers and several smaller vessels.

**EDUCATION.** Plans were under way in 1951-52 for extensive expansion and modernization of all branches of education, with emphasis on technological training. In 1949-50 there were 206,270 recognized primary schools with 17,450,000 pupils; 19,705 secondary schools, 4,718,000 pupils; 48,730 vocational schools, 1,395,000 pupils; 28 teaching and affiliating universities, 351,000 students. English is being replaced as the language of instruction by Indian languages.

**AGRICULTURE.** Over 200,000,000 acres are under cultivation, but India probably will continue to be a food-deficit area for several years. Rice is the staple food crop; cotton, tea and jute are important cash crops. Final production estimates for the crop year 1951-52 included rice, 31,649,000 metric tons (paddy); wheat, 6,476,000 tons; barley, 2,170,000 tons; tea, 282,200 tons; sesame, 448,000 tons; cottonseed, 1,288,000 tons; cotton, 644,000 tons; jute, 4,700,000 bales of 400 lb. each.

Livestock in 1951 included 42,584,000 buffalo, 130,298,000 other domestic cattle, 39,975,000 sheep, 47,121,000 goats and 4,173,000 pigs.

**MANUFACTURING.** The republic retained almost all the industrial facilities of British India and is among the ten leading industrial nations of the world. Cotton and jute manufacturing are the two largest industrial activities, the former concentrated largely in Bombay and the latter in Calcutta. The provinces of West Bengal and Bombay are the two most important areas of industrial concentration, with Madras ranking third in importance. In 1952, cotton mills produced 666,400 metric tons of cotton yarn and 4,212,000,000 meters of cloth. Processing of sugar is of great importance; raw sugar production totaled 3,447,000 metric tons in the 1951-52 season. About 90 per cent of the world's supply of jute is processed in the republic. The iron and steel industry is being expanded; in 1952, 1,884,000 metric tons of pig iron

and ferroalloys and 1,708,000 tons of raw steel were produced. Production of silk and woolen goods, vegetable oils, coir yarn, paper, matches, salt, cement, leather and shoes, and heavy chemicals is also important.

**COMMUNICATIONS.** The division of the British Indian railway system gave the republic 33,865 miles of track, all under government control. The chief ports are Bombay and Calcutta. According to *Lloyd's Register*, the merchant marine had 192 steamers and motor ships (100 tons and over) aggregating 476,683 gross tons on June 30, 1952. Roads in 1948 totaled 296,438 miles. In 1951, airlines flew approximately 265,000,000 passenger-miles.

**TRADE.** India is primarily an importer of finished manufactured goods and an exporter of raw materials and semimanufactured products. Recent trade data are as follows (in millions of rupees):

	1950-51	1951-52	1952-53*
Exports	6,014	7,328	5,736
Imports	6,089	9,676	6,537

\* Provisional figures.

The leading customers in 1951-52 were Britain (26%), the U. S. (18%), Australia (6%), Pakistan (6%) and Burma (3%). Leading suppliers included the U. S. (30%), Britain (16%), Pakistan (12%) and Egypt (4%). Leading exports were jute manufactures (39%), tea (13%) and cotton manufactures (8%). Main imports included cotton and waste, machinery, grain, pulse and flour.

**MINERALS.** The republic has rich mineral resources. The most valuable mineral is coal, deposited throughout most of the nation; production in 1952 was approximately 36,800,000 metric tons. Manganese ore (1,179,700 tons in 1951) is mined in Madhya Pradesh, and gold in Orissa.

Assam and the Punjab produce oil. Other minerals include iron ore, monazite diamonds, magnesite, uranium, zircon, silver, graphite, gypsum, tungsten ore and sapphires.

**FINANCE.** The 1953-54 budget provided for revenue of Rs.4,393,000,000. After providing for ordinary and capital expenditures, the estimated overall deficit was Rs.1,400,000,000. The public debt on March 31, 1952, was about Rs.25,874,000,000, most of which was held internally.

**TOPOGRAPHY.** Occupying the center of the Indian subcontinent, the main part of the republic is shaped somewhat like an arrowhead, with the tip located at the south. In the northern section are the Himalayas, south of which lie extensive plains drained by the Ganges and Brahmaputra river systems. The republic contains a large part of the great Indo-Gangetic plain which extends from the Bay of Bengal on the east to the Afghan frontier and

the Arabian Sea on the west. This plain is the richest and most densely settled part of the subcontinent, containing more than half the population. Another distinct natural region is the Deccan, a plateau of 2,000 to 3,000 feet elevation, occupying the southern or peninsular portion of the subcontinent. In several regions, the Deccan is quite mountainous.

Forming a part of the republic are several groups of islands—the Laccadives (14 islands totaling about 80 sq. mi.) in the Arabian Sea; the Andamans (204 islands totaling 2,508 sq. mi.); and the Nicobars (19 islands totaling 635 sq. mi.) in the Bay of Bengal.

India's three great river systems, all rising in the Himalayas, have extensive deltas. The Ganges flows south and then east for 1,540 miles across the northern plain to the Bay of Bengal; part of its delta, which begins 220 miles from the sea, is within the republic. The Indus, starting in Tibet, flows northwest for several hundred miles in Kashmir before turning southwest toward the Arabian Sea; it is important for irrigation in Pakistan. The Brahmaputra, also rising in Tibet, flows eastward first through India and then south into Pakistan and the Bay of Bengal.

**CLIMATE.** India's climate varies from temperate in the north to tropical in the south, where temperatures are almost constant the year around. During the November-February cool season, northern India has a climate like that of the Riviera. From March to June steadily rising temperatures reach a peak sometimes as high as 115°, and then comes the southwest monsoon. Rainfall is heavy in most of the Union, averaging 50 to 60 inches in Assam and reaching 500 inches in the Assamese Garo hills.

## Pakistan

(Member of British Commonwealth)

Area: 365,907 sq. mi.\*

Population (census 1951)†: 75,687,000 (Moslem [about 80%], Hindu, Sikh).

Density per square mile: 206.8.

Governor General: Ghulam Mohammed.

Prime Minister: Mohammed Ali.

Principal cities (census 1951)†: Karachi, 1,005,000 (capital); Lahore, 849,000 (Punjab manufacturing center); Dacca, 401,000 (capital, East Pakistan); Chittagong, 269,000 (eastern seaport); Rawalpindi, 243,000 (military center).

Monetary unit: Pakistani rupee.

Principal languages: English, Bengali, Punjabi, Urdu, Hindi.

\* Unofficial estimate. † Provisional.

**HISTORY.** Pakistan, a self-governing member of the Commonwealth of Nations and one of the two successor states to British India, is the world's largest and most important Moslem state.

The history of Pakistan prior to 1947 is

principally that of India. (See India.) Its creation was to a large extent attributable to Mohammed Ali Jinnah, who envisaged and pressed for the idea of a predominantly Moslem state carved out of the Moslem areas of British India. Upon the transfer of power on Aug. 15, 1947, Jinnah became the first governor general; he died on Sept. 11, 1948, and was succeeded by Khwaja Nazimuddin. The latter became Prime Minister upon the assassination of Liaquat Ali Khan, Oct. 16, 1951; he was replaced on Apr. 17, 1953, by Mohammed Ali.

**GOVERNMENT.** Pending the promulgation of a definitive constitution, Pakistan has a provisional government which is federal in nature. The governor general represents the Crown and is advised by the prime minister and his cabinet, who are responsible to the constituent assembly, which has both legislative and constitution-making powers. The provincial legislatures enjoy autonomy in certain fields; the provincial governors are appointed by the governor general on advice of the federal cabinet.

**PROVINCES.** Pakistan consists of two large sectors approximately 1,000 miles apart, separated by the Republic of India: in the northwest, Sind, Baluchistan, the North-West Frontier Province, western Punjab, the princely state of Bahawalpur, and a few other small native states; in the northeast, eastern Bengal and the Sylhet district of Assam. It contains large communal minorities of Hindus and Sikhs. Over half of the nation's population is concentrated in east Bengal, which contains only 15 per cent of the total area.

**DEFENSE.** In the division of the British Indian Army, Pakistan received 20 regiments, which, with levies and contributions of native princes, made a total army strength of about 250,000 in 1949. The Royal Pakistan Navy has a force of 3 destroyers, 2 sloops, 2 frigates, 6 mine sweepers and several smaller vessels. The air force has 1 transport and 2 fighter squadrons.

**SOCIAL AND ECONOMIC CONDITIONS.** Literacy was barely 13.2 per cent, according to the 1951 census. In 1950, it was reported that there were 38,453 primary schools, 4,963 secondary schools, 1,649 high schools and 3 universities.

Pakistan, poor in industry and natural resources, is mainly an agricultural nation. Upwards of 45,000,000 acres are under cultivation, almost half of which are irrigated, largely in Sind and west Punjab in western Pakistan. The Punjab contains important wheat-growing areas, and eastern Pakistan is rich in jute, rice and tea. Production estimates for the crop year 1951-52 included wheat, 4,016,000 metric tons; rice, 11,800,000 tons (paddy); maize, 402,000

tons; barley, 164,000 tons; tea, 24,200 tons; jute, 6,300,000 bales of 400 lb. each; cotton (ginned), 249,000 tons; cottonseed, 478,000 tons. Wool production in 1950 was 11,000 tons (greasy). In 1949-50 there were 24,300,000 cattle, and, in 1947-48, 6,145,000 sheep, 5,600,000 buffalo, 454,000 camels and 470,000 horses.

Pakistan is an exporter of agricultural products and an importer of manufactured commodities. Recent statistics are as follows (in millions of Pakistani rupees):

	1950-51	1951-52	1952-53
Exports	2,235	2,300	1,534
Imports	1,520	1,929	1,713

Chief exports in 1951-52 were raw jute (53%) and raw cotton (32%). Leading customers were India (27%), Britain (13%) and Japan (10%); leading suppliers, Japan (24%), Britain (19%) and India (16%). Important imports included cotton yarns and manufactures (33%), machinery and vehicles (14%) and metals and ores (8%).

Development of a unified nation is retarded by the fact that communication between east and west Pakistan is possible only through a thousand miles of Indian territory or by a long sea voyage. In the division of the British Indian railways, Pakistan received 6,659 miles of track. Western Pakistan has an estimated road mileage of 46,000, about half of which is suitable for motor traffic. Eastern Pakistan has few roads for motor vehicles, but there are about 2,800 miles of waterways navigable by small steamers. On June 30, 1952, the merchant marine had 47 vessels aggregating 142,073 gross tons. Karachi, chief port, is the distribution center for north India and has the most important airport on the subcontinent. Chittagong is being developed as a port for eastern Pakistan.

Pakistan's industries supply only a small part of the national requirements. The most important manufacturing area is in the vicinity of Lahore in the Punjab. Industries include cotton ginning, spinning and weaving, sugar refining, cement making, flour milling, railway and engineering workshops and two petroleum refineries.

Mineral resources are limited. Production in 1952 included petroleum, 178,800 metric tons; coal and lignite, 600,000 tons; (1951) chromite, 18,000 tons; gypsum, 22,800 tons.

The preliminary budget for the fiscal year 1953-54 (which includes the railway budget) estimated revenue at Rs.1,448,500,000 and expenditure at Rs.1,447,100,000.

**TOPOGRAPHY AND CLIMATE.** Almost all of Sind and the west Punjab are a continuation of north-central plains leading up to rugged mountains in the north and west which traverse Baluchistan and the North-West Frontier Province. Eastern Pakistan is a low-lying, flat country with ele-

vation averaging not more than 600 feet above sea level.

Numerous rivers flow southward into western Pakistan from the Himalayas; the greatest one, the Indus, enters the Arabian Sea near Karachi. Many barrages form the basis of artificial irrigation systems; land outside the reach of river water is either desert or semiarid. Several rivers with numerous branches cover eastern Pakistan and provide natural irrigation; the area includes part of the Ganges delta.

Western Pakistan has a brisk, cool season between November and March, with average mean temperature of about 60°, and an extremely warm period between April and November, with an average mean of 85°. Rainfall averages about 10 inches a year, of which Sind may receive as little as 6.3 in. Eastern Pakistan is within the range of the summer monsoon, with average annual rainfall of 85 in. The average maximum temperature varies between 75° and 100° April to June; the minimum, between 45° and 60° November to January.

## OCEANIA

### Australia, Commonwealth of (Member of British Commonwealth)

Area: 2,974,581 square miles.

Population (est. June 30, 1952): 8,648,539 (excluding full-blooded aborigines, estimated at 50,000).

Density per square mile: 2.9.

Governor General: Field Marshal Sir William Slim.

Prime Minister: Robert Gordon Menzies.

Principal cities (est. Dec. 31, 1951): Sydney, 1,610,580 (seaport, wool market); Melbourne, 1,360,200 (seaport; wool, wheat); Brisbane, 453,660 (seaport; industrial center); Adelaide, 442,500 (seaport); Perth, 317,000 (western seaport); Canberra, 26,784 (capital).

Monetary unit: Australian pound (£A).

Language: English.

Religions (census 1947): Anglican, 39.0%; Roman Catholic, 20.7%; Presbyterian, 9.8%; Methodist, 11.5%; other Christians, 7.1%; others, 11.9%.

**HISTORY.** Australia was the last continent to be discovered. The first Europeans to land were the Dutch, who sailed into the Gulf of Carpentaria in March, 1606. Later in the same year, Luis Vas de Torres, a Spaniard, sailed through the strait subsequently named for him, and may have touched at several points on the north coast. In 1642 Abel Tasman (for whom Tasmania was named) sailed from west to east along the southern shore and proved that Australia was not a part of the Antarctic continent. The continent was called New Holland until about 1850.

In 1770 Captain James Cook, after visiting New Zealand, sailed to the east coast of New Holland and landed south of the present city of Sydney. His account of the

country led to its being claimed and settled by Great Britain.

The first settlement, made in 1788 at Botany Bay, was founded as a penal station for criminals from England. Transportation of criminals was virtually suspended in 1839, and Australia had comparatively few white settlers until gold was discovered in Victoria in 1851, after which, immigrants poured in. By 1860 all the states (then separate colonies) except Western Australia had been granted responsible government.

On January 1, 1901, the six Australian states united to form the Commonwealth of Australia. The Commonwealth supported Great Britain wholeheartedly in World War I, sending 329,883 troops abroad, all volunteers, of whom 59,258 were killed, died or were missing. The financial drain on a nation of less than 6,000,000 population was extremely heavy.

The Commonwealth again declared war on Germany September 3, 1939; and in 1940-42, Australian troops distinguished themselves in the African, Balkan, Crete and Malayan campaigns. With the Japanese invasion of Southeast Asia and New Guinea in late 1941 and early 1942, Australia was threatened with invasion for the first time in 150 years. The Commonwealth became a vast base for U. S. troops, and Gen. Douglas MacArthur set up his headquarters there on March 17, 1942.

In the general elections held August 21, 1943, Prime Minister John Curtin's Labour government was confirmed in office. Curtin died July 5, 1945, and was succeeded by Joseph B. Chifley, also of the Labour party. The Crown's appointment, on Commonwealth recommendation, of the Hon. William J. McKell, a local Labourite, to the office of Governor General, Jan. 31, 1947, to succeed the Duke of Gloucester, was bitterly criticized by the opposition. The Labour government was soundly defeated by the Liberal-Country-party coalition in general elections held Dec. 10, 1949, and Robert Gordon Menzies, the Liberal leader, became Prime Minister on Dec. 15. Elections held April 28, 1951, were again won by the coalition, although by a narrower margin.

**GOVERNMENT.** Australia, a self-governing member of the British Commonwealth of Nations, is a federal union of six states (New South Wales, Victoria, Queensland, South Australia, Western Australia and Tasmania) and two territories (Northern Territory and Australian Capital Territory). The Constitution is modeled to some extent on that of the U. S. Federal legislative power is vested in a Parliament of 2 houses—the Senate with 60 members (10 for each state), the House of Representatives with 121 members (plus 2 without vote who represent the territories) elected on a population basis.

Executive power nominally is exercised by the Queen, through a Governor General, who is appointed by her. Actually, however, the Commonwealth is administered by the Prime Minister and the Cabinet members, who are responsible to the House of Representatives and must enjoy its confidence. The House of Representatives continues its sessions for three years from the date of its first meeting, unless sooner dissolved. Senators are chosen for six years, but the Senate may be dissolved in the event of prolonged disagreement with the House. The party alignment in the House after the elections of April 28, 1951, was as follows: Liberal 52, Country 17 and Labour 52 (and 2 non-voting members).

Each of the states is headed by a governor appointed by the British Crown and advised by the Prime Minister and his Cabinet; the latter actually administer the government. As in the U. S., the state governments retain the powers not specifically delegated to the federal government. The Northern Territory is administered by the federal government.

Federal judicial power is vested in a Federal Supreme Court of 7 justices, appointed by the Governor General in Council. Each state has its own judicial system.

Compulsory military service was reintroduced in 1951. The army then had upwards of 20,000 men, and the navy had over 10,000 men, with 1 aircraft carrier, 3 cruisers, 10 destroyers, 3 submarines (on loan from Britain), 14 frigates and many smaller craft. The air force had about 10,000 men. Army, navy and air units were sent to Korea. During World War II, 350,000 men served overseas.

**SOCIAL AND ECONOMIC CONDITIONS.** Normal primary education is provided free by the states. In 1950 there were 7,969 state schools, with average attendance of 869,906, and 1,835 private schools, with average attendance of 281,056. The 8 universities had a total enrollment of 33,000.

Australia is the world's chief producer of wool, and sheep farming is the Commonwealth's most important single industry. About 55 per cent of Australia's total area is suitable (mining excepted) only for pastoral pursuits. On March 31, 1952, there were 117,646,000 sheep, 14,893,000 cattle, 1,022,000 hogs and 937,000 horses. The production of wool in 1951-52 was 470,000 long tons (greasy); butter, 136,000 tons; cheese, 40,000 tons. Production of meat averages 1,000,000 long tons annually; it was 1,030,000 tons in 1951-52.

The most important crop is wheat; the areas of heaviest production are in South Australia and New South Wales, but production in Western Australia is rapidly increasing. Production of wheat in 1951-52

was 4,278,000 long tons; oats, 616,000 tons; barley, 489,000 tons; maize, 100,000 tons.

Sugar and cotton are grown in Queensland and New South Wales, tobacco in northeast Victoria, and vines chiefly in South Australia and Victoria.

Australian industry has made rapid progress, with the value of industrial output tripling between 1915 and 1940. Manufacturing is concentrated in or near the capital cities and is mainly concerned with primary production such as the processing of pastoral products, although heavy industrial goods are being manufactured in increasing volume. New South Wales is the leading industrial state. Power for industry is derived almost entirely from coal. In 1950-51 there were 43,129 factories, employing 968,232 workers and producing net output valued at £A845,665,000 and gross output valued at £A2,151,056,000. Steel production was 1,434,000 long tons in 1951.

Trade statistics for three years (in millions of Australian pounds) are as follows:

	1949-50	1950-51	1951-52
Exports	613.7	981.8	669.0
Imports	536.1	741.4	1,050.1

In 1951-52 the leading customers were Britain (31%), the U. S. (11%), France (9%) and Japan (7%). Leading suppliers were Britain (44%), the U. S. (10%), India (5%) and Japan (4%). Chief exports were wool (48%), wheat (8%), meat and flour (each 5%) and lead (4%).

The principal ports are Sydney, Melbourne and Adelaide. Railway mileage in 1951 totaled 27,000; roads, over 500,000. Civil aviation is under Commonwealth control. The merchant marine had 355 ships of 100 tons and more, aggregating 559,442 gross tons, on June 30, 1952. In March 1953, there were 1,362,000 telephones and 1,989,000 radio receiving licenses and, in Dec. 1952, 1,085,000 automobiles and 575,000 commercial vehicles.

Revenue on consolidated account (actual for 1951-52) was £A1,016,828,000 (estimated 1952-53: £A1,009,020,000); expenditure (actual 1951-52), £A1,016,828,000 (estimated 1952-53: £A1,009,020,000). Loan fund expenditure (actual 1951-52) was £A55,493,000 (estimated 1952-53: £A54,000,000). The public debt (federal and state) on Dec. 31, 1952, was £A3,392,292,000 (federal only: £A1,917,590,000).

**NATURAL FEATURES AND RESOURCES.** Australia is approximately equal in area to the United States and is more than three-fourths the size of Europe. Much of the continent is an arid plain with neither high mountains nor large forests. The coast line is unusually regular, but two great peninsulas jut out toward New Guinea in the north—Cape York Peninsula and Arnhem Land. Between them lies the Gulf of Carpentaria. A wide bay, the Great

**Australian Bight**, cuts into the south coast. Along the east coast, ranges of mountains run from north to south, reaching their highest point in Mt. Kosciusko (7,352 ft.). West of the mountains are three plains, one drained by the Murray and Darling Rivers which flow into the sea southeast of Adelaide, the second draining into Lake Eyre, a salt lake, and the third—a tropical plain—bordering the Gulf of Carpentaria. The western half of the continent is occupied by a desert plateau which rises into barren, rolling hills near the west coast. It includes the Great Victoria Desert, to the south, and the Great Sandy Desert to the north. The island of Tasmania (26,215 sq. mi.), lying off the southeastern coast, is largely a plateau.

Australia possesses considerable mineral resources. The value of mineral output in 1951 was £A119,190,000. Most important is gold (1951 output: 886,000 ounces). Second in importance is coal, mined near Sydney, Brisbane and in eastern Tasmania (1952 output: 19,181,000 long tons, plus 8,096,000 tons of brown coal). The Broken Hill mines in New South Wales are one of the most valuable silver-lead-zinc areas in the world. Silver production in 1951 was 10,283,000 ounces; lead, 212,000 long tons; and zinc, 189,000 tons. Other important minerals include tin (1,556 tons), copper (18,009 tons), iron ore (1,459,000 tons) and uranium.

Forest products include timber (rough sawn), eucalyptus oil, sandalwood oil, tan bark and yacca gum. Sea products include bêche-de-mer, oysters, pearls, pearl shell, tortoise shell and agar-agar.

**CLIMATE.** The northern third of the country lies within the torrid zone and the remainder within the south temperate zone. The coolest portion of the mainland (Victoria) is not unlike Spain and south Italy. The average temperature for Australia as a whole is 70°, and the northern coastal areas average 82°. Only in the center of the continent does the annual range of temperature exceed 30°. Large areas of the continent receive less than 10 inches of rain. The eastern highlands and Victoria are the best-watered regions.

Norfolk Island, under Commonwealth administration since 1914, lies about 800 miles east of New South Wales. It enjoys a delightful subtropical climate. Citrus fruits, bananas and coffee are grown.

**PAPUA AND NEW GUINEA, TERRITORY OF**—Status: Australian territory and U. N. trust territory.

Administrator: J. K. Murray.

Capital: Port Moresby (population 3,000).

Chief exports: rubber, gold.

Agricultural products: coconuts, rubber, copra, cacao.

Minerals: gold, silver, platinum.

Effective July 1, 1949, the Australian territory of Papua and the U. N. trust territory of New Guinea were joined in an administrative union by act of the Australian parliament. Provision is made for an executive and a legislative council.

Papua, comprising the southeastern part of the island of New Guinea, and the islands of the D'Entrecasteaux, Louisiade, and nearby groups, was annexed by Queensland in 1883 and by the British Crown in 1888. It came under the control of the Australian Commonwealth in 1901 and became the Territory of Papua in 1906. Japan invaded Papua in early 1942, but in Dec. 1942, Australian control was restored.

In 1950, there were 4,400 nonnatives in the territory. About 280,000 acres of land have been leased, chiefly by planters, and more than 62,000 acres are cultivated.

The U. N. trust territory of New Guinea, comprising the northern section of eastern New Guinea (93,000 sq. mi.) was mandated in 1920 by the League of Nations to the government of the Commonwealth of Australia, together with the Bismarck Archipelago (New Britain, New Ireland and adjacent islands), the Admiralty Islands with several outlying groups, and the northern Solomon Islands (Bougainville and Buka). It was placed under United Nations trusteeship Dec. 13, 1946, with Australia as the administering power. Japanese troops occupied much of the territory in 1942-45. In 1950, there were 8,700 nonnatives in the territory.

**FIIJI**—Status: Colony.

Governor: Sir Ronald H. Garvey.

Capital: Suva (population 25,395).

Foreign trade (1952): exports, £10,998,050; imports, £12,008,620. Chief exports: sugar (51%), gold, coconut oil.

Agricultural products: sugar (exports 1952: 132,857 long tons), coconut oil (14,437 tons), copra, bananas, molasses.

Mineral: gold (1952: 80,189 oz.).

Fiji colony consists of an archipelago of from 200 to 250 islands in the South Pacific Ocean about 1,740 miles northeast of Sydney, Australia. The larger islands, including Viti Levu (4,053 sq. mi.) and Vanua Levu (2,130 sq. mi.) are mountainous and of volcanic origin. The archipelago was ceded to Great Britain by the native ruler in 1874.

The population in 1952 included 185,877 Fijians and 148,802 Indians. Importation of the latter to work the sugar plantations has led to important social and economic changes. There has been almost no intermarriage between Fijians and Indians, and considerable ill feeling has developed between them.

During World War II, the archipelago was an important air and naval station on the route from the U. S. west coast and Hawaii to Australia and New Zealand.

Fiji has a pleasant climate, with the temperature seldom leaving the 80°-90° range; rainfall is heavy in the southeastern three quarters of the archipelago, averaging 10-12 ft. annually, but is almost nil in the northwestern quarter.

**TONGA (FRIENDLY ISLANDS)—Status:** Protected state.

Foreign trade (1951): exports, £1,388,564; imports, £889,373. Chief export: copra.

This native Polynesian kingdom in the Pacific came under British protection through the Anglo-German agreement of November 14, 1899. The native queen is advised by a British Agent; the 21-member native Legislative Council is partly elected and partly nominated. The only important products are copra and bananas.

**PITCAIRN ISLAND—Status:** Colony.

Located in the South Pacific, about midway between Australia and South America, Pitcairn has an area of 2 square miles. It was settled in 1790 by British mutineers from the ship "Bounty," commanded by Capt. Bligh. Overpopulation forced removal of the settlement to Norfolk Island in 1856, but about 40 soon returned. The island is governed by an elected council headed by a chief magistrate. The population in Sept. 1950 was 127.

**NAURU—Status:** U. N. trust territory.

This small island (8 sq. mi.), an important source of phosphate (exports 1950-51: 950,800 tons) was annexed by Germany in 1888 and was placed under joint Australian, New Zealand and British mandate after World War I. In 1947 it was placed under U. N. trusteeship, with the same three administering powers. It lies about 2,215 miles northeast of Sydney and to the northeast of the Solomon Islands.

---

## New Zealand

(Member of British Commonwealth)

Area: 103,416 square miles (104,242 including outlying and annexed islands).

Population (est. March 31, 1953): 2,037,553 (1945: Europeans, 93.5%; Maori, 5.8%; others, .7%).

Density per square mile: 19.7.

Governor General: Lt. Gen. Sir Willoughby Norrie.

Prime Minister: Sidney G. Holland.

Principal cities (census 1951): Auckland (greater), 329,123 (seaport and naval base); Wellington (greater), 208,292 (capital); Christchurch, 174,221 (cereals, stock raising); Dunedin City, 95,457 (textiles).

Monetary unit: New Zealand pound (NZ).

Language: English.

Religions (census 1951): Church of England, 37.5%; Presbyterian, 22.3%; Roman Catholic, 13.6%; Methodist, 8.1%; Baptist, 1.6%; others, 16.9%.

**HISTORY.** New Zealand, about 1,250 miles east of Australia, consists of two main is-

lands and a number of smaller outlying islands so scattered that they range from the tropical to the antarctic. The islands, which have approximately the area of Italy, were discovered and named New Zealand in 1642 by Abel Tasman, a Dutch navigator. Captain James Cook explored them in 1769 and after him came many other sailors, sealers, whalers and traders. English missionaries landed in 1814 but made slow progress. On Jan. 22, 1840, to head off a possible French move to claim New Zealand, Britain formally annexed it. The New Zealand Company was formed the same year.

New Zealand was granted self-government in 1852, a full parliamentary system and ministries in 1856 and dominion status on Sept. 26, 1907. Meanwhile from 1861 to 1871 there was fierce intermittent fighting with the native Maoris. Gold was first discovered in 1853.

New Zealand's Labour party came to power in 1935 for the first time, with Michael J. Savage as Prime Minister. The party began a program of liberal economic and social measures and it was again successful in the 1938 elections.

When Savage died in 1940, he was succeeded by Peter Fraser, who formed a special war cabinet (New Zealand had joined Britain in the war against the Axis in September, 1939). In World War II, New Zealand troops fought in Egypt, Greece, Crete, North Africa, Sicily and Italy, and the islands served as a major base for U. S. troops in the Pacific war.

After 14 years in power, the Labour party was defeated at the general election of Nov. 30, 1949, and the National party took office with Sidney G. Holland as Prime Minister. **GOVERNMENT.** New Zealand is a self-governing member of the British Commonwealth of Nations. The British Crown is represented by a Governor General named by the Queen after consulting with the New Zealand government. Legislative power is vested in the eighty-member House of Representatives. The former upper house (Legislative Council) was abolished effective Jan. 1, 1951. The House elected on Sept. 1, 1951, had 50 National-party members and 30 Labour-party members. Executive power is vested in the Cabinet chosen from the members of the majority party in the House and headed by the Prime Minister.

Military service was voluntary until July 22, 1940, when compulsory service was instituted. Service outside New Zealand, hitherto voluntary, also became obligatory during World War II. At full mobilization, New Zealand had 157,000 men in the armed forces and 124,000 in the Home Guard. Almost one-third of the whole male population of military age served overseas. The peacetime force is stabilized at 11,000 men.

Naval forces include 2 cruisers, 6 escort destroyers and a number of mine sweepers.

Navy and volunteer army forces were dispatched to Korea in 1950, and compulsory service was readopted. A mutual defense pact with the U. S. was signed Sept. 1, 1951.

**SOCIAL AND ECONOMIC CONDITIONS.** State education is free and compulsory between the ages of 7 and 15. More than half the Maoris attend the regular public schools; the remainder attend missionary and native village schools. In Dec. 1950, there were 2,077 primary schools with 268,333 students, and 251 secondary schools with 40,887 students. University students numbered 10,936. About 10 per cent of the national budget is expended on education.

New Zealand's advanced social security system, financed principally by a 5 per cent tax on wages, salaries and firm incomes, gives benefits for old age, sickness, unemployment, maternity and hospitalization, widows, orphans, poor families and chronic invalids. The death rate is among the world's lowest.

Primarily a grazing country, New Zealand is one of the world's largest exporters of mutton, lamb, wool, butter and cheese. In 1952, livestock included 35,293,911 sheep, 5,158,276 cattle and 564,253 hogs. Wool production for 1951-52 was 181,696 long tons (greasy basis). Outside of grass, the chief crop is wheat (3,890,167 bushels in 1951-52). Other crops are oats, barley, potatoes, onions, tobacco, fruits and vegetables. Butter production in 1951-52 was 191,559 long tons; cheese, 95,479 tons; meat, 600,200 tons. Gross agricultural income in 1951-52 was £NZ209,300,000.

The chief industries of New Zealand are freezing of meat and making of butter, cheese and condensed milk. Others of major importance are electricity generation, saw milling and clothing manufacture.

In 1949-50 there were 8,027 factories with 144,309 workers. Gross output was valued at £NZ332,204,000.

Trade statistics for three years (in millions of New Zealand pounds) are as follows:

	1950	1951	1952
Exports	183.0	247.6	240.8
Imports	158.1	206.5	252.4

In 1952, New Zealand's leading customers, by value, were Britain (65%), the U. S. (11%) and France (5%). Leading exports were wool (34%), dairy products (33%) and meat (19%). Leading suppliers were Britain (55%), Australia (11%) and the U. S. (9%).

The merchant marine had 165 ships (100 tons and over), aggregating 231,707 gross tons, on June 30, 1952. Government-owned railway mileage in 1951 was 3,531; highway mileage in 1950 was 12,725.

Recent government financial data on current account are as follows (in millions of New Zealand pounds):

	1950-51	1951-52	1952-53
Revenue	143.8	180.8	177.8
Expenditure	135.5	168.2	174.5

The public debt on March 31, 1951, was £NZ693,424,678, including £26,191,109, on which interest payments had been suspended since 1931 by agreement with the British government.

**TOPOGRAPHY, NATURAL RESOURCES AND CLIMATE.** New Zealand's two main components are North Island and South Island, separated by Cook Strait, which varies from sixteen to 190 miles in width. North Island (44,281 sq. mi.) is 515 miles long and volcanic in its south central part. It contains many hot springs and beautiful geysers. In the southern part of North Island is Lake Taupo (238 sq. mi.), in the center of a pumice-covered plateau.

South Island (58,093 sq. mi.) has the Southern Alps along its west coast, with Mt. Cook (12,349 feet) the highest point in New Zealand.

Principal minerals are coal (1952: 2,750,000 long tons), gold (1951: 75,115 ounces) and silver (1951: 133,291 ounces). Other minerals of importance include tungsten, pumice, silica sand, asbestos, scheelite, iron ore and phosphate. About 20 per cent of the total area is forested; 573,600,000 board feet of lumber were cut in 1952 to 1953.

Flounder, snapper and tarakihi account for 75 per cent of New Zealand's fishery industry. There also are extensive oyster beds. The once important whaling industry declined sharply with development of pelagic whaling.

Numerous rushing streams give New Zealand a great volume of hydroelectric power. South Island has available about 4,000,000 horsepower, and North Island 800,000. About 95 per cent of the population has access to power.

The ocean tempers New Zealand's climate, which otherwise might have great variation. The range of mean temperatures is small (at Auckland, 66.3° in January, 51.2° in July; at Wellington, 60.9° in January, 47.2° in July). Rainfall is moderate except on the western slope of the Southern Alps; it averages 45.3 inches annually at Auckland and 47.5 inches at Wellington and is heaviest in winter.

**DEPENDENCIES.** The Auckland Islands (234 sq. mi.) and Campbell Island (44 sq. mi.) are the principal outlying islands, which have a total area of 307 square miles. They are included within the geographical boundaries of New Zealand as proclaimed in 1847. The Aucklands and Campbell are uninhabited. Six hundred miles north of

the Aucklands are the volcanic Kermadec Islands (13 sq. mi.), annexed in 1887.

In Polynesia a number of uninhabited islands were brought under New Zealand's control in 1901. Rarotonga and Mangaia in the Cook group total 84 square miles. Niue (or Savage Island) (115 sq. mi.) is the largest island outside the Cook group. New Zealand also administers the Ross Dependency, an antarctic region claimed by Great Britain in 1923, and the Union (or Tokelau) Islands, transferred in 1925 from the Gilbert and Ellice Islands colony.

**WESTERN SAMOA**—Status: U. N. trust territory.

Administrator: G. R. Powles.

Capital: Apia (population 10,000).

Foreign trade (1952): exports, £1,763,739; imports, £1,687,790. Chief export: copra.

Principal products: copra, cacao, bananas, tropical fruits, rubber.

The former German Samoan Islands were occupied by New Zealand troops in the opening weeks of World War I and were mandated to New Zealand by the League of Nations in 1920 as the Territory of Western Samoa. They came under U. N. trusteeship in 1947, with New Zealand continuing as the administering authority. The administrator is assisted by a legislature with a Samoan majority and a consultative Native Council. There are 9 islands, of which the largest and most populous are Savaii (703 sq. mi.) and Upolu (430 sq. mi.). They are largely mountainous but fertile. The inhabitants are Polynesian Christians.

### Pacific Islands

High Commissioner in Western Pacific: R. C. Stafford Stanley.

Island groups in the Pacific administered by the British High Commissioner in the Western Pacific include (1) Gilbert and Ellice Islands, (2) British Solomon Islands, and (3) New Hebrides Condominium (see French Overseas Territories). The High Commissioner has headquarters at Honiara, Solomon Islands.

**GILBERT AND ELLICE ISLANDS**—Status: Colony.

The islands in these groups (including the Gilbert group; the Ellice group; Ocean Island [the seat of administration], Fanning, Washington and Christmas Islands; and the Phoenix group) were proclaimed a British protectorate in 1892 and annexed as a colony in 1915. The most important product is high-grade phosphate.

Ownership of Canton and Enderbury islands in the Phoenix group was long in dispute between Great Britain and the United States until 1939, when an agreement for "use in common" was reached by the two governments. Several of the Gilbert Islands were occupied by Japanese forces in World War II, and Tarawa was

the scene of one of the fiercest battles in U. S. Marine Corps history in Nov., 1943, when it was retaken from the Japanese.

**SOLOMON ISLANDS**—Status: Protectorate.

This British protectorate, lying east of New Guinea, includes the islands of Guadalcanal, Malaita, San Cristobal, New Georgia, Santa Isabel, Choiseul and numerous smaller islands. Bougainville, one of the group, is under Australian mandate. The islands, which came under British protection late in the 19th century, were the scene of several important U. S. naval and military victories during World War II. There are no native states, and administration is carried on by a Resident Commissioner assisted by a nominated Advisory Council. The most important products are copra and rubber.

## Bulgaria (People's Republic)

(Blgariya)

Area: 42,741 square miles.

Population (est. 1951): 7,310,000 (1934: Bulgarian, 86.7%; Turkish, 10.1%; Gypsy, 1.3%; others, 1.9%).

Density per square mile: 171.0.

Chairman of Presidium: Georgi Damjanov.

Premier: Vulko Chervenkov.

Principal cities (census 1946): Sofia, 434,888 (capital, railroad center); Philippopolis (Plovdiv), 125,440 (commercial center); Varna, 77,792 (Black Sea port); Ruschuk, 53,420 (chief Danube port); Burgas, 43,634 (Black Sea port).

Monetary unit: Lev.

Languages: Bulgarian, Turkish.

Religions: Greek Orthodox, 84.4%; Mohammedan, 13.5%; Jewish, .8%; Roman Catholic, .8%; others, .5%.

**HISTORY.** Bulgaria, with a strife-ridden political past, is an agrarian country about the size of Virginia. It sided timidly with Germany in World Wars I and II, hoping to win territory. It lost in both wars.

The first Bulgarians, a tribe of wild horsemen akin to the Huns, crossed the Danube from the north in A.D. 679, and took the province of Moesia from the Roman Empire. They adopted a Slav dialect and Slavic customs and twice conquered most of the Balkan peninsula between 893 and 1280. After the Serbs subjected their kingdom in 1330, the Bulgars gradually fell prey to the Turks, and from 1396 to 1878, Bulgaria was a Turkish province. In 1878, after the Turks had ruthlessly suppressed a Bulgar revolt, Russia forced Turkey to give the country its independence; but the European powers, fearing that Bulgaria might become a Russian dependency, intervened. By the Treaty of Berlin (July, 1878), Bulgaria became autonomous under Turkish sovereignty, with the province of Eastern Rumelia under a Christian governor.

In 1887, Prince Ferdinand of Saxe-Coburg-Gotha was elected ruler; on Oct. 5, 1908, he declared Bulgaria (and Rume-lia) an independent kingdom and was proclaimed Tsar.

In the First Balkan War (1912-13), Bul-garia joined its neighbor states and de-feated Turkey; then it bickered with Serbia and Greece over division of Macedonia and was defeated by them in the Second Bal-kan War, which lasted one month—June-July, 1913.

Still coveting Macedonia, Bulgaria joined Germany in World War I and lost. On Oct. 3, 1918, Tsar Ferdinand abdicated in favor of his son, who became Tsar Boris III. The Treaty of Neuilly the next year disarmed Bulgaria, reduced it to its 1878 size, and levied a heavy indemnity. Internal disorder, underground intrigue and Agrar-ian-Communist agitation marked the next fifteen years.

Boris assumed dictatorial powers in 1934-35. When Hitler awarded his nation South-ern Dobruja, taken from Rumania in 1940, the weak but land-hungry Boris joined the Nazis in war the next year and occupied parts of Yugoslavia and Greece. Later, with the fortunes of war swinging inexorably against them, the Germans tried to force Boris to send his troops against the Rus-sians. Boris resisted and died under mys-terious circumstances on Aug. 28, 1943.

Simeon II, infant son of Boris, became nominal ruler under a regency. Three days after Russia declared war on Bulgaria on Sept. 5, 1944, Bulgaria declared war on Germany. Russian troops streamed in the next day, and under an informal armistice a coalition "Fatherland Front" cabinet was set up under Kimon Georgiev.

The Fatherland Front regime represented the Communist, Zveno, Agrarian and So-cial Democratic parties, but real power was in the hands of the Communists, who had active Soviet support and were ably led by Georgi Dimitrov, veteran party leader and former secretary-general of the Comintern.

This Government initiated extensive so-cial and economic reforms, instituted a ruthless purge of war criminals and sup-pressed all political groups which failed to subscribe to its policies. The elections of Nov. 18, 1945, and Oct. 27, 1946, were con-ducted in typical Communist manner, with the Fatherland Front securing overwhelm-ing majorities, according to official figures.

After the plebiscite of Sept. 8, 1946, which resulted in overthrow of the mon-archy, and the Oct. 27 elections, the Com-munists quickly moved to take over the Government officially and to reduce the political opposition to complete impotence. Dimitrov replaced Georgiev as Premier on Nov. 22, 1946.

During the next years, Bulgaria con-

tinued to strengthen its ties with its Bal-kan neighbors back of the "iron curtain." Dimitrov died July 2, 1949, while on a leave of absence in the U.S.S.R. Vassil Kolarov was elected Premier on July 20. He died on Jan. 23, 1950, and was suc-ceeded by Vulko Chervenkov, Dimitrov's son-in-law.

The United States broke diplomatic re-lations with Bulgaria on Feb. 21, 1950.

**GOVERNMENT.** The constitution of Dec. 4, 1947, modeled after that of the Soviet Union, provides that the unicameral Na-tional Assembly is "the supreme organ of the State." The Assembly elects a 15-mem-ber presidium, the president of which is the nominal chief of state. Governmental administration is carried on by the Premier and his Cabinet, who are responsible to the Assembly. On Feb. 4, 1948, the Communist-dominated Fatherland Front was declared the only official party.

**PEACE TREATY OF 1947.** Under the treaty which took effect Sept. 15, 1947, Bulgaria's boundaries are those which existed Jan. 1, 1941, thus including Southern Dobruja. Bulgaria was to pay reparations in the amount of \$45,000,000 to Greece and \$25,-000,000 to Yugoslavia and was to make compensation for damage to Allied prop-erty in Bulgaria at the rate of 75 per cent of the cost of replacement.

**DEFENSE.** The 1947 treaty fixed the strength of the armed forces as follows: army 55,000; anti-aircraft artillery 1,800; navy 3,500; and air force 5,200 men and 90 aircraft, none of them bombers. The army was purged of all anti-Communist officers late in 1946 and has been reorganized along Soviet lines.

**SOCIAL AND ECONOMIC CONDITIONS.** Though elementary education is compul-sory and free between 7 and 14, the rate of illiteracy is relatively high. Schools in 1950 included 9,072 primary schools and 319 secondary and technical schools. The University of Sofia and 8 other universities and colleges had an estimated enrollment of 50,000.

Most of the population is Greek Ortho-dox. Clergy of all faiths are paid by the state. The national language, Bulgarian, is closely related to Russian; both employ the Cyrillic alphabet.

Bulgaria is predominantly agrarian, with 80 per cent of the population engaged in agriculture. Because of the mountainous character of the country, however, only about 43 per cent of the land is tilled or used for pasture. Most landholdings are small, and primitive methods of cultiva-tion predominate. More than half the cul-tivated area is devoted to cereals, including wheat (production in 1948: 1,470,000 metric tons), corn, barley, oats and rye. Other crops are tobacco (1949: 49,799 metric tons), alfalfa, cotton, flax, potatoes and

sugar. There are extensive vineyards in the southern valleys. In 1950 Bulgaria had 2,140,000 cattle and 1,500,000 hogs; in 1948 there were 449,000 horses and mules and 8,995,000 sheep and goats.

Industries of Bulgaria are of minor importance and with few exceptions—preparation of tobacco leaf, wines and liquors, distillation of attar of roses, and flour milling—are confined to domestic markets. All industries of any importance have been nationalized. The Stalin chemical combine began production of fertilizers at the new town of Dimitrovgrad in Nov. 1951.

Foreign trade necessarily consists of the exchange of agricultural products for cheap manufactures. Statistics, in billions of leva, are as follows:

	1946	1948	1950
Exports	14.94	34.10	51.62
Imports	17.51	35.20	38.57

Leading customers in 1950 were the U.S.S.R. (45%) and Czechoslovakia, Hungary, Rumania and Poland (31%). Leading suppliers were the U.S.S.R. (67%) and the four above-named satellites (31%). Tobacco was the principal export.

Although the Danube is navigable along the northern border, only a comparatively small percentage of prewar Danube ship tonnage was Bulgarian. Railroad mileage, all nationalized, totaled 2,231 in 1952; highway mileage was about 14,000 in 1950.

Government revenues and expenditures for 1953 were estimated at 19,021,000,000 new leva and 17,973,000,000 new leva, respectively. The lev was revalued in 1952.

**TOPOGRAPHY, NATURAL RESOURCES AND CLIMATE.** Two mountain ranges and two great valleys mark Bulgaria's topography. The Balkan belt crosses the center of the country, almost due east-west, rising to a height of 7,800 feet. The Rhodope range breaks off from the Balkans in the west, curves and then straightens out to run nearly parallel along the southern border. Between the two ranges is the valley of the Maritsa, Bulgaria's principal river. Between the Balkan range and the Danube, which forms most of the northern boundary with Rumania, is the Danubian tableland, traversed by several short rivers. Southern Dobruja, a fertile region of 2,900 square miles below the Danube delta, is an area of low hills, fens and sandy steppes.

Soft coal is Bulgaria's principal mineral; production in 1952 was estimated at 4,500,000 metric tons. Other mineral products include aluminum and rock salt; uranium deposits have been reported.

About 30 per cent of the country is forested, but a large part is unproductive scrub, and most of the valuable woods are virtually inaccessible. Wood imports usually exceed exports.

Bulgaria's climate is characterized by

cold winters and warm summers approaching the subtropical in the south. Rain and snowfall average twenty to forty inches a year. Temperatures at Sofia average 28° in January and 69° in July.

## Burma (Republic)

Area: 261,749 square miles.

Population (est. 1952): 18,859,000 (1941: Burmans, 60%; Shans, 7%; Chins, 2%; Kachins, 1%; Indians, 6%; Chinese, 1%; Indo-Burmans, 1%; others, 22%).

Density per square mile: 72.0.

President: Dr. Ba U.

Premier: U Nu.

Principal cities (est. 1942): Rangoon, 501,219 (capital, chief port), Mandalay, 150,000 (river port, upper Burma), Moulmein, 70,000 (seaport); (est. 1941) Bassein, 50,000 (river port).

Languages: Burmese (70%), English.

Religions: Buddhist, 90%; Mohammedan, 3%; Hindu, 3%; Christian, 2%; others, 2%.

**HISTORY.** Lying on the eastern side of the Bay of Bengal between India, China and Siam, the Union of Burma came into existence as an independent state on Jan. 4, 1948. Since that time the new republic has held its own with difficulty against attacks on the one hand by Communist rebels seeking its overthrow and on the other by Karen insurgents seeking wider territorial autonomy.

In 1612 the British East India Company sent agents to Burma, and in the 17th and 18th centuries the Burmese stoutly resisted the efforts of British, Dutch and Portuguese traders to establish posts on the Bay of Bengal. Actual British rule dated from 1826, and in 1886 British troops forced the annexation of all Burma to India. On April 1, 1937, the British separated Burma from India and set it up as a Crown colony with its own legislature and a British governor.

For hundreds of years a battlefield of petty princes, Burma became a key battleground in World War II largely because the 800-mile Burma Road was the Allies' vital supply line to China. The Japanese invaded the country in Dec., 1941, and by May, 1942, had occupied most of it, cutting the road. In Aug., 1942, the Japanese set up a puppet government under Dr. Ba Maw.

After one of the most difficult campaigns of the war, Allied forces liberated most of Burma prior to the Japanese surrender on Aug. 14, 1945. Civil government was resumed in Oct., 1945, but the native nationalist feeling continued strong.

An agreement with Britain signed on Jan. 27, 1947, gave the Burmese an opportunity to determine their future form of government. The leftist Anti-Fascist People's Freedom League secured a majority in the Constituent Assembly elec-

tions held April 9, 1947, and the Assembly voted on June 17, 1947, to declare Burma a republic. Thakin Nu (now known as U Nu) became premier July 19, 1947, upon the assassination of U Aung San. Sovereignty was formally transferred on Jan. 4, 1948.

**GOVERNMENT.** The constitution adopted by the Constituent Assembly Sept. 24, 1947, provides for a government headed by the president, who is elected by the two houses of parliament—the Chamber of Deputies and the Chamber of Nationalities—meeting in joint session. The president appoints the premier on nomination of the Chamber of Deputies; the cabinet must enjoy the confidence of the Chamber of Deputies. Four frontier areas—the Shan, Kachin and Karenni states, and the Chin special division—are constituent parts of the Union but enjoy some autonomy.

The Anti-Fascist People's Freedom League won about two-thirds of the 250 seats in the Chamber of Deputies in the first elections held under the new constitution in 1951-52.

The constitution contemplates a form of state socialism, with the operation of all public utilities and the exploitation of all natural resources to come eventually under state control.

**SOCIAL AND ECONOMIC CONDITIONS.** Burma had 4,937 state and recognized schools in 1947-48, with enrollment of 443,332. In addition, almost every hamlet has a Buddhist school where tuition is free. Because of the many monastic schools, the percentage of wholly illiterate men is small. There are universities at Rangoon and Mandalay, with a total of 3,350 students in 1950.

The natives in general are Mongolian; the Burmese are the most advanced.

Indians, settled in the delta region, supply most of the coolie labor, while the Chinese constitute the artisan and merchant class. Buddhism, the national religion, profoundly affects the national character; every village has its temple.

Burma is essentially agricultural, with crop growing concentrated in the delta and river valleys. It is a leading producer of rice, the staple food, which occupies two-thirds of the cultivated area. Output in 1951-52 was 6,500,000 short tons. Crops grown in the dry zone in upper Burma include millet, cotton, peanuts and sesame. Other crops include tobacco, fruit, vegetables and cereals. About 1½ million acres are under irrigation. The number of rubber plantations has increased. The principal domestic animals are water buffalo (721,000 in 1950), used as a beast of burden in the delta, and small humped oxen, which predominate in other areas. Cattle, including oxen, totaled 4,488,000 in 1950.

Leading industries include silk weaving and dyeing, rice husking, oil refining and wood carving.

The whole Burmese economy was disrupted during the Japanese occupation, and rehabilitation has made slow progress, hampered by lack of heavy material, consumer's goods and transport, and in some areas by extreme lawlessness and rebellion.

Recent trade statistics are as follows (in millions of kyats):

	1948-49	1949-50	1950-51
Exports	733.3	660.7	980.8
Imports	373.3	432.3	681.2

Chief exports in 1950-51 were rice (77%), teakwood (5%) and cotton (3%). Leading customers were Ceylon (24%), India (23%), Japan (13%) and Indonesia (13%); leading suppliers, India (37%), Japan (18%) and Britain (16%).

The 1952-53 budget, ordinary and capital, estimated revenue at 834,956,000 kyats (plus a surplus of 52,600,000 from nonrevenue transactions) and expenditure at 1,131,293,000 kyats. The kyat replaced the rupee as the monetary unit in 1952.

The principal commercial arteries are the Irrawaddy, navigable for 900 miles to Bhamo, and its tributaries. Regular steamer service is maintained to Bhamo. Railways, designed to supplement river transport, totaled 1,777 miles in 1950, all state-owned. There are no rail connections with India or any other country. The length of roads was 12,472 miles in 1949. The Burma Road connects Lashio, a rail terminus in northern Burma, with Kuning, China.

**TOPOGRAPHY, NATURAL RESOURCES AND CLIMATE.** Slightly smaller than Texas, Burma is divided into three natural regions: the Arakan Yoma, a long, narrow mountain range forming the barrier between Burma and India; the Shan Plateau in the east, extending southward into Tenasserim; and the Central Basin running down to the flat, fertile delta of the Irrawaddy in the south. This delta contains a network of inter-communicating canals and nine principal mouths.

Mineral resources are considerable but, in many cases, undeveloped. Production by the Burmah Oil Company, Ltd., in 1939, was 7,396,000 barrels, but in 1951 it was only about 650,000 barrels.

Other minerals include lead, silver, tin, zinc, nickel, cobalt, copper, gold, iron ore, molybdenum, coal, uranium (reported), rubies, sapphires and jade. Postwar recovery has been slow.

More than half of Burma is forested, with government reserves totaling 31,637 square miles. Teak, valuable for naval construction, is the main timber product. Its cutting is strictly controlled. Natural rubber exports were estimated at 10,800 met-

ric tons in 1952. Fisheries are exploited both along the coast and inland.

Burma forms part of the Asiatic monsoon region, but its climate is modified by the topography. There are three seasons: (1) cool and rainless (November through February); (2) hot and rainless (March through May) and (3) rainy (June through October). At Rangoon the annual temperature range is only 10°; at Mandalay, about 20°. Annual rainfall at Rangoon is about 100 inches; at Mandalay, 33.4 inches.

## Chile (Republic) (República de Chile)

Area: 286,323 square miles.

Population (census April 1952): 6,032,376 (white, 30%; mestizo, 65%; Indian, 5%).

Density per square mile: 21.1.

President: Carlos Ibañez.

Principal cities (census 1952): Santiago, 1,412,940 (capital); Valparaíso, 222,238 (port); Concepción, 133,573 (farming center); Temuco, 90,957 (farming); Viña del Mar, 88,196 (resort center).

Monetary unit: Peso.

Language: Spanish.

Religion: Roman Catholic.

**HISTORY.** Chile has had a relatively tranquil history amid South America's long record of revolution and strife, but it has suffered repeated labor disturbances in recent years.

Europeans first arrived in 1536, when Diego de Almagro, an associate of Pizarro, led an unsuccessful invasion from Peru. Five years later another Spaniard, Pedro de Valdivia, founded Santiago. On Sept. 18, 1810, Chile rebelled against Spanish rule, but independence was not won completely until 1818, when Bernardo O'Higgins and José de San Martín finally crushed the Spanish armies.

Chile, which has never lost a war, fought with Bolivia and Peru in 1879-83 and won the province of Antofagasta, Bolivia's only outlet to the Pacific, as well as extensive areas from Peru. In World War I, Chile was neutral. The overthrow in 1931 of Colonel Carlos Ibañez, who had seized power in 1927, was followed by a brief chaotic period in which seven presidents tumbled in and out of office, but Dr. Arturo Alessandri (1932-38) did much to restore Chile's political and economic order.

Pedro Aguirre Cerda, victor in the 1938 elections, initiated an extensive socialist program before his death on Nov. 25, 1941. The term of Juan Antonio Ríos, elected as Radical candidate of the Popular Front in 1942, was marked by political dissension and labor difficulties. Under both external and internal pressure, the latter notably from its strong Communist party, Chile finally broke relations with the Axis on

Jan. 20, 1943, but did not declare war on Japan until Feb. 14, 1945.

Ríos died June 27, 1946. Following a special election, Gabriel González Videla, candidate of a leftist-center coalition, became president on Nov. 3, 1946. His administration was plagued by recurrent labor disputes, some of which were said to be Communist-inspired. He pursued a strong anti-Communist policy. Carlos Ibañez was elected to succeed him Sept. 4, 1952.

**GOVERNMENT AND DEFENSE.** The nation elects a president every six years, a Senate of forty-five members every eight years (one half renewable every four years) and a Chamber of Deputies of 147 members every four years. The president is assisted by a cabinet responsible to him but subject to impeachment by Congress, which also may override a presidential veto by two-thirds vote. All literate citizens over twenty-one may vote in elections.

Military service is compulsory, beginning at twenty with an initial training period of nine months, after which a civilian is on reserve until the age of forty-five. In 1948 the army was unofficially estimated at 25,000. The navy, normally 12,000 men strong, had in 1953 one old battleship of 28,000 tons, two light cruisers (acquired from the U. S. in 1951), six destroyers, six frigates, seven submarines, two coast defense ships and other smaller craft. The air force was expanded during World War II.

**SOCIAL AND ECONOMIC CONDITIONS.** Education, free and compulsory between 7 and 15, is directed by the central government. In 1943, illiteracy was estimated at 24 per cent, third lowest in Latin America. School enrollment in 1948 was about 739,000. There are five universities, including the State University of Chile. About 20 per cent of the budget is devoted to education.

The base of the white population is Spanish, although there are some German, English, Irish and Scotch. Roman Catholicism is the dominant religion, but church and state were separated in 1925.

Chilean agriculture is mostly confined to the temperate central valley, similar to that of California. The available productive land is extremely limited, and most of it must be irrigated. Wheat (1951: 988,000 metric tons) is the leading crop, followed by potatoes, oats, barley, corn, string beans and fruits. Grapes, next to wheat in acreage, produced 55,500,000 gallons of wine in 1952. Feudal-type estates, averaging 2,500 acres, predominate. Cattle in 1951 totaled 2,160,000 and sheep (1949) 6,345,000. Wool production in 1951 was about 12,000 metric tons (clean basis).

The livestock industry does not supply local needs, but wool is used in Chilean textile mills, and wool and hides are exported.

Foreign trade (in millions of U. S. dollars):

	1950	1951	1952
Exports	282	371	456
Imports	248	329	371

In 1952 the leading customers were the U. S. (57%), Argentina (8%) and Britain and Germany (each 5%); leading suppliers were the U. S. (52%), Britain (9%) and Argentina (8%). Chief exports in 1952 were copper (49%) and nitrate (13%). Leading imports were machinery and vehicles, textiles, sugar, and iron and steel and manufactures.

Although Chile dreams of great industrial development and has all the necessary raw materials except high-grade coal and tin, progress continues slowly. Except for mineral processing, most manufacturing is of low-priced consumer's goods, particularly textiles. A steel industry was established in 1946; production in 1952 amounted to 243,000 metric tons.

Highway mileage totaled approximately 31,250 in 1947, about a third improved. Rail mileage is 5,434, partly electrified. Civil aviation is highly developed in the interior, and several international lines serve the country. According to *Lloyd's Register*, the merchant marine had 92 vessels (100 tons and over), aggregating 187,618 gross tons, on June 30, 1952.

Recent financial data are as follows (in billions of pesos):

	1951	1952	1953*
Revenue	26.0	36.1	47.5
Expenditure	27.6	42.0	47.5

\* Budget estimate.

The total public debt on Dec. 31, 1950, was 7,526,100,000 pesos, of which 5,461,100,000 pesos represented the internal debt, long and short term.

The basis of the country's economy is its mineral resources in the northern desert provinces of Atacama, Antofagasta and Tarapacá, where the only natural nitrate in the world is found. Some 60 per cent of the world's iodine is obtained as a by-product of nitrate processing. Chile's world monopoly in nitrate, however, declined in importance with development of the synthetic product.

The world's largest copper reserve, estimated at 134 billion pounds, is in Chile, and also more than 900 million tons of high grade iron ore. The reserve of Chilean coal, noted for quantity rather than quality, exceeds two billion tons.

Mineral production in 1952 was as follows: coal and lignite, 2,193,199 metric tons; copper (smelter production) 404,742 tons; iron ore, 2,310,474 tons; nitrate of soda, 1,427,817 tons; gold, 176,021 ounces; silver, 1,246,327 ounces. Mercury, manganese ore, cobalt, zinc, tungsten and molybdenum also are produced, and de-

posits of uranium have been reported. Oil was first produced in Tierra del Fuego in Dec. 1945. Production in 1952 was about 800,000 barrels.

Forests, estimated to cover 35 million acres in the southern provinces, yield a variety of commercial wood, including conifer, laurel and magnolia. Fishery products include cod, eel, oysters, sawfish, sardines, tuna and whale-oil.

**TOPOGRAPHY AND CLIMATE.** A narrow, mountainous land, Chile is 2,661 miles in length, and varies from 46 to 250 miles in width; one-third of its area is covered by the towering ranges of the Andes. In the north is the mineral-rich Atacama Desert, between the coast mountains and the Andes. In the center is a 700-mile-long valley, thickly populated, between the Andes and the coastal plateau. In the south, the Andes border on the ocean.

At the southern tip of Chile's mainland is Punta Arenas, the southernmost city in the world, and beyond that lies the Strait of Magellan and Tierra del Fuego, an island divided between Chile and Argentina. The Juan Fernández Islands, in the South Pacific about 400 miles west of the mainland, and Easter Island, about 2,000 miles west, are Chilean possessions.

Chile's short rivers are useful only for irrigation and as sources of electric power. The country has many ports but few good harbors, and most of the tonnage must be handled by lighters.

In Chile's extreme north the days are hot, the nights warm on the coast and cool in the interior. Central Chile's climate is comparable to that of southern California, and southward in the lake regions the climate is similar to that of the U. S. Pacific Northwest. In the extreme south, fogs and storms keep the mean temperature low. Santiago has extreme recorded temperature ranges of 25° and 96°. Snow is rare.

## China (Republic) (Chung-Hua Min-Kuo)

Area: 3,858,900 square miles.\*

Population (est. 1950): 475,000,000.\*

Density per square mile: 123.1.

President, Nationalist China: Generalissimo Chiang Kai-shek.

Premier: Chen Cheng.

Chairman of People's Council: Mao Tse-tung.

Premier: Chou En-lai.

Principal cities (est. 1950): Shanghai, 5,406,644 (chief port, industrial and financial center); Peiping (Peking), 1,940,290 (capital, Communist China); Tientsin, 1,785,813 (commercial center); Mukden, 1,551,317 (Manchurian industrial center); Canton, 1,495,694 (southern commercial center); Port Arthur, 1,054,466 (northern seaport and naval base); Chungking, 1,038,683 (river port; trade center); Nan-

king, 1,020,000 (former Nationalist capital).

Monetary unit: Chinese dollar.

Language: Chinese.

Religions: Confucianism, Buddhism, Taoism, Mohammedanism, Christianity.

\* Including Province of Formosa (Taiwan), Manchuria and Tibet; excluding Outer Mongolia.

**HISTORY.** By 2000 B.C., the Chinese were living in the Hwang Ho basin, and they had achieved an advanced stage of civilization by 1200 B.C. The great philosophers, Lao-tse, Confucius, Mo Ti and Mencius lived during the Chou dynasty (about 1122 to 249 B.C.). The warring feudal states were first united under Emperor Ch'in Shih Huang Ti, during whose reign (246-210 B.C.) work was begun on the Great Wall. Under the Han dynasty (206 B.C. to A.D. 220) China prospered and traded with the West.

The T'ang dynasty (618-907) has often been called the golden age of Chinese history. Painting, sculpture and poetry flourished under royal patronage, and printing made its earliest known appearance.

The Mings, last of the native rulers (1368-1644), overthrew the Mongol or Yuan dynasty (1280-1368) established by Kublai Khan, whose dominions extended into eastern Europe. The weakening Mings in turn were overthrown in 1644 by invaders from the north, the Manchus.

The Chinese closely restricted foreign activities, and by the end of the 18th century only Canton (and the Portuguese port of Macao) were open to European merchants. Following the Anglo-Chinese War of 1839-42, however, several treaty ports were opened and Hong Kong was ceded to Britain. Treaties signed after further hostilities (1856-60) weakened Chinese sovereignty and removed foreigners from Chinese jurisdiction. The disastrous Chinese-Japanese War of 1894-95 was followed by a scramble for Chinese leases and concessions by European powers which resulted in the nationalist Boxer Rebellion (1900), suppressed by an international force.

The death of the Empress Dowager Tzu Hsi in 1908 and the accession of the infant emperor Hsuan T'ung (Pu-Yi) were followed by a nation-wide rebellion led by Dr. Sun Yat-sen, who became first President of the Provisional Chinese Republic in 1911. The Manchus abdicated on Feb. 12, 1912. Dr. Sun resigned in favor of Yuan Shih-k'ai, who suppressed the republicans but was forced by a serious rising in 1915-16 to abandon his intention of declaring himself Emperor. Yuan's death in June, 1916, was followed by years of civil war between rival militarists and Dr. Sun's republicans. The death in 1925 of Dr. Sun, who had controlled only the Canton area in opposition to the recognized regime, was followed by a revival of the Kuomintang party, which practically defied nat.

ionalist forces, led by Gen. Chiang Kai-shek and advised originally by Communist experts, soon occupied most of China, setting up a Kuomintang regime in 1928. Internal strife continued, however, and Chiang broke with the Communists.

An alleged explosion on the South Manchurian Railway on Sept. 18, 1931, brought invasion of Manchuria by Japanese forces, who installed the last Manchu emperor, Henry Pu-Yi, as nominal ruler of the puppet state of "Manchukuo." Japanese efforts to take China's northern provinces in July, 1937, were resisted by Chiang Kai-shek, who meanwhile had succeeded in uniting most of China behind him. Within two years, however, Japan seized most of the ports and railways. The Kuomintang government retreated first to Hankow and then to Chungking, while in "Occupied China" the Japanese set up a puppet government at Nanking headed by Wang Ching-wei. In 1943 Chiang became political as well as military leader of "Free China."

When the Japanese surrendered in 1945, a treaty was signed with the Soviet Union providing for Soviet withdrawal from Manchuria, joint Chinese-Soviet control of Manchurian railways for 30 years, a joint Chinese-Soviet naval base at Port Arthur and a free port at Dairen.

The surrender of Japan also touched off a race between Nationalist and Communist forces for control of China. Agreement was reached for the establishment of a Political Consultative Council representing all groups on Oct. 10, 1945, but fighting broke out again early in 1946 with the Communists controlling northern and central Manchuria and northern China.

The civil war continued without decisive results until late 1948, when the Communists loosed new drives, which by the end of 1949 had brought all China except the island of Formosa under their control. Barricaded on Formosa, the Nationalist regime was somewhat weakened by internal dissension and had little means at its disposal to make any effective counter-attack upon the mainland. The U. S., however, after the outbreak of the Korean war in June, 1950, promised naval and air aid to repel any invasion of Formosa. Chiang, who had stepped down from the presidency on Jan. 21, 1949, reassumed that post on Feb. 28, 1950, and on Mar. 8 appointed Chen Cheng premier.

The Communists meanwhile set up in September, 1949, a soviet-type government. After prolonged negotiations, the People's government and the Soviet Union signed a 30-year treaty of friendship and mutual aid on Feb. 14, 1950; its published terms provided for a \$300,000,000 Soviet credit and for the return of the Changchun railroad to China and the eventual return of Port Arthur and Dairen.

The Communist regime subsequently was recognized as the legal government of China by many nations but was unsuccessful in its efforts to secure a place in the U. N. It threw several hundred thousand men into the Korean conflict in Oct. 1950, in a futile effort to drive U. N. forces from Korea. On July 23, 1953, an armistice was signed at Panmunjom. (For further details, see Korean War in the index.)

**GOVERNMENT.** Under the Nationalist constitution of 1947, the highest state organ is the National Assembly, which meets once each three years and is the "sovereign organ of the people." Its members are elected for 6-year terms on the basis of territorial and professional representation. The Assembly elects the President and Vice President of the Republic for 6-year terms. The organs of government are five in number—the Executive Yüan (cabinet), whose members, headed by the Premier, are appointed by the President with the concurrence of the Legislative Yüan; the Legislative Yüan, which exercises legislative functions when the Assembly is not in session and has ultimate control over the cabinet; the Control Yüan, broadly corresponding to an "upper house," which has general supervisory and censorial functions; the Judicial Yüan, the highest court of justice; and the Examination Yüan, which controls civil service.

The constitution of the People's republic was approved by a political consultative conference on Sept. 27, 1949, and was proclaimed on Oct. 1. It established as the highest organ of the state the people's government council, which is headed by a chairman and has legislative functions. The government council established as the highest executive organ a state administrative council (cabinet) headed by the premier. Effective control is exercised throughout by the central committee of the Chinese Communist party.

**DEFENSE.** Military service is compulsory in Nationalist China; the initial training period is one or two years. The fighting strength of the army in 1952 was upwards of 500,000 men. The air force had about 200 planes and the navy, some 100 small vessels. About 80 per cent of the budget was tabbed for military purposes.

Supreme control of the Communist armed forces is vested in the people's revolutionary military council. Communist forces in 1952 numbered about 3,000,000, in addition to 1,500,000 to 2,000,000 regional and district troops and 600,000 to 1,000,000 security troops. The air force had about 1,800 Soviet-built planes, about half of them jet fighters. Naval strength was negligible.

**EDUCATION.** Emphasis on the mainland is upon technical training and inculcation of the Communist ideology. At the end of

1951 there were reported to be nearly 250 colleges and universities with 175,000 students, 5,442 secondary schools with more than 2,000,000 students, and 541,000 primary schools with more than 43,000,000 pupils.

The mass literacy movement has been accompanied by the replacement of the old classical or "dead" Chinese language with the popular vernacular (Pai-hua) of the Mandarin dialect, employing perhaps 1,000 of the most essential of the many thousands of Chinese ideographs.

**POPULATION AND RELIGION.** Estimates of China's population vary and are only calculated guesses, since no national census has ever been taken. The population is quite unevenly distributed, with most of it in the following five areas: the central portion of the northern plain (Shantung); the Yangtze Kiang delta; a coastal belt extending southward from the Yangtze delta to the Canton delta; the Hupeh basin centered around Hankow; and the isolated basin of Szechwan, far to the west. Most Chinese who are not Christians or Moslems practice one of the three native religions—Confucianism, Buddhism or Taoism. Almost 10 per cent of the population is estimated to be Moslem; there are also many Roman Catholics and Protestants.

**AGRICULTURE.** In China, nearly 80 per cent of the population depend on the land for livelihood. Subsistence crops are necessarily emphasized, but China is still not self-sufficient in food. Cultivation is intensive, holdings are small, and irrigation is widely practiced. The three most important food crops (1951, excluding Manchuria and Formosa) are rice, 48,300,000 metric tons (paddy); wheat, 21,457,000 tons; and maize, 6,344,000 tons.

In northern China, wheat, barley, corn, sorghum, millet and other cereals, and beans and peas predominate, whereas in the south, rice, sugar and indigo are most important. The Yangtze basin, one of the most favored agricultural regions in the world, is China's premier granary. Tea, the chief beverage, is grown mainly in the central uplands, coastal ranges and Szechwan; 11,400 metric tons were exported during 1950.

Silkworm culture is practiced widely, especially in the lower Yangtze valley. Cotton, the major purely industrial crop, runs from 2,500,000 to 4,000,000 bales a year. Soybeans are of ever-increasing importance. Other crops include fibers, tobacco, vegetable oils, cane sugar and many medicinal plants and spices.

The urgent need for subsistence crops has confined grazing grounds for sheep and cattle to the dry northwest and to mountain pastures. However, such animals as goats, poultry and especially pigs are raised everywhere.

The Communist land-reform program is reported to be proceeding gradually in carefully planned stages.

**INDUSTRY.** Industrially, China is still in its infancy. Development has been mainly in the erection of textile mills, silk and flour mills, match factories, tanneries and a few steel and cement mills. The production of consumer's goods far exceeds that of producer's goods, which must still be imported. Much of the industry which had been developed in the lower Yangtze valley and the Shanghai area was moved westward in 1938 and 1939 to escape Japanese capture, and southward in 1948 to escape Communist control.

Postwar industrial rehabilitation proceeded at a slow pace because of the high cost of labor and materials, high interest rates, power shortages and the unsettled political situation. The Communist regime is reported to be concentrating upon Manchuria as China's industrial center and to be shifting some industries to the northwest.

**TRADE.** Foreign trade statistics, in billions of Chinese dollars, are as follows:

	1946	1947	1948*
Exports	420	6,432	1,399
Imports	1,909	14,395	1,193

\* Gold dollars.

In 1948 the U. S. supplied 48 per cent of China's recorded commercial imports, followed by India, 11 per cent; Britain, 8 per cent; and Japan, 1 per cent. Of the total exports, 31 per cent went to Hong Kong, 20 per cent to the U. S., 6 per cent to Japan and 4 per cent to Britain. Textiles and products accounted for 45 per cent of the domestic exports; tung oil, 9 per cent; pig bristles, 7 per cent; and eggs and tungsten ore, each 3 per cent.

**COMMUNICATIONS.** Exploitation of many of China's natural resources has been handicapped by the lack of internal communications. There is an extensive system of inland waterways and canals, however, and in central and south China most of the freight is carried by water.

The modern highway system now totals about 100,000 miles, but at least half of the system is in need of extensive repairs. The railway system of about 14,000 miles, concentrated in the lower Yangtze basin and in north China and Manchuria, has been rehabilitated and is being extended by the Communists. The main port, Shanghai, at the mouth of the Yangtze, normally accounts for about 50 per cent of the total maritime customs revenue, and is the Far East's major port.

**FINANCE.** Civil war threw China's finance into confusion. Complete budget figures are not available for recent years, but both the Nationalist and People's governments suffered large deficits. The Nation-

alist deficit was financed by the sale of gold, silver and foreign exchange; that of the People's government, to a considerable extent by note and victory-bond issues.

**TOPOGRAPHY.** China has about 1 1/4 times the area of the continental United States. Its coast line is roughly a semi-circle, about 2,150 miles long. The greater part of the country is mountainous, and only in the lower reaches of the Hwang Ho and Yangtze Kiang are there extensive low plains. The principal mountain ranges are the Tien Shan, to the northwest; the Kunlun chain, which attains a maximum height of 23,890 feet, running south of the Takla Makan and Gobi deserts; and the Trans-Himalaya, connecting the Kunlun with the borders of China and Tibet. Manchuria is largely an undulating plain connected with the north China plain by a narrow lowland corridor. Inner Mongolia contains the relatively fertile southern and eastern portions of the Gobi. The large island of Hainan (13,500 sq. mi.) lies off the southern coast.

**HYDROGRAPHY.** China proper consists of three great river systems. The northern part of the country is drained by the Hwang Ho (Yellow), 2,700 miles long and mostly unnavigable. The central part is drained by the Yangtze Kiang, the fifth longest river in the world (3,100 mi.). The Si Kiang in the south is about 1,650 miles long and navigable for a considerable distance. In addition, the Amur forms part of the northeastern boundary.

**MINERALS.** Mineral resources are considerable. Iron ore, far less plentiful than coal, is mined principally in the lower Yangtze valley and in north China. Tin, mined in Yunnan and southwest Szechwan, has been a major mineral export. Of some rarer minerals, notably antimony and tungsten, China is normally the world's leading producer. Lead, zinc, silver, mercury and gold are also mined, and discovery of uranium has been reported. Mineral production in 1951 was estimated as follows: coal and lignite, 43,250,000 metric tons; iron ore, 3,000,000 tons; tin (in ore), 3,700 tons; tungsten, 15,800 tons.

**FORESTS AND FISHERIES.** China urgently needs reforestation. Most remaining forests are on inaccessible mountain slopes. Bamboo is cultivated in groves throughout the country south of the Tsinling mountains. Both sea and river fisheries are rich and varied, and fresh or salted fish is a staple food in many districts. The coastal fisheries of Shantung, Chekiang and Kwantung are especially valuable.

**CLIMATE.** There are great diversities of climate. North China has the coldest winters in the world for its latitude (23.5° average in January at Peiping). The Yangtze valley is warmer, with winter tempera-

tures more like those of Britain, while the south has warm subtropical winters. Summer temperatures are uniformly hot throughout China (about 79° in July at Peiping and 82° at Hong Kong). South China receives regular rainfall averaging from 40 to 60 inches annually, but in the north rainfall is irregular and not as heavy; droughts and floods are common.

**MANCHURIA**—Status: Integral part of Chinese People's Republic.

Agricultural products (1949, in metric tons): soy beans, 1,800,000; wheat (1946), 393,000; rice, 380,000; millet; sorghum; maize.

Industries: iron and steel, machinery, textiles, food processing, chemicals.

Minerals: coal, iron ore, gold, lead ore, uranium, manganese ore.

Manchuria, which before the Japanese invasion of 1931 was governed apart from China proper, now constitutes an integral part (five provinces) of China proper. A separate state (Manchukuo), set up under the Japanese, was never recognized by the U. S., China or Britain. The regime was a transparent screen for Japanese control exercised by the Kwantung army. The Japanese hold on Manchuria was broken by the Soviet invasion of August, 1945.

The decision reached at the Cairo conference (1943) that Manchuria should revert to Chinese possession was confirmed by the Chinese-Soviet treaty signed Aug. 14, 1945. Soon after the Japanese surrender, however, Chinese Communist troops moved into the country and continued to control most of northern and central Manchuria after the Soviet evacuation. In October, 1948, the Communists conquered the last few Nationalist-held areas. Manchuria was the base for the Communist attacks on U. N. forces in Korea which began in October, 1950.

As a result of extensive Japanese development, Manchuria became probably the richest industrial area in China, containing about two-thirds of her heavy industry and half her railway mileage.

The Communist People's government decided to concentrate its first efforts at industrial development in Manchuria.

Manchuria is also a rich agricultural region with a cultivable area estimated at 70,000,000 acres. Lumber from the forests of the East Manchurian Highlands ordinarily supplies the needs not only of the Manchurian plain but also those of North China.

**FORMOSA (TAIWAN)**—Status: Province (Part of Republic of China).

Area: 13,836 square miles.

Population (census Dec. 1951, excluding troops and militia): 7,830,748.

Capital: Taipei (Taihoku), 540,971.

Foreign trade (1951): exports, U. S. \$98,200,000; imports, \$85,500,000. Chief exports: sugar (53%), rice (13%), tea (7%).

Agricultural products (est. 1951-52, in metric tons): raw sugar, 553,400; rice (milled), 1,333,600; tea, bananas, pineapples, sweet potatoes.

Industries: sugar refining, canning, cement, chemicals, wood, paper.

Minerals: gold, coal, petroleum, silver, sulfur.

Formosa is a large island in the western Pacific, separated from China to the west by the Taiwan straits (narrowest point, 90 mi.). The Pescadores (Bokoto) (about 77 sq. mi.) and other outlying islands became administratively a part of Formosa under Japanese rule. Formosa, ceded to Japan in 1895 after the Chinese-Japanese War, remained Japanese until it was restored to China in 1945, in accordance with the Cairo declaration. It was the only territory under the control of the Nationalist regime after 1949.

Most of the inhabitants are of Chinese stock. There are also about 140,000 aboriginal tribesmen in the mountainous interior. Sugar cane, grown under the plantation system, is the most prosperous of the island's developments.

Formosa is one of the world's chief sources of camphor, and government monopolies of camphor, salt, opium and tobacco have been established. Forest resources are enormous. Railway mileage totaled (1951) about 3,050 and roads 16,380.

**SINKIANG (CHINESE TURKESTAN)**—Status: Chinese province.

Area: 705,969 square miles.

Population (est. 1950): 3,730,000.

Capital: Tihwa (Urumchi) (20,000).

Chief exports: wool, cotton, furs, skins, sheep, cattle, horses.

Agricultural products: wheat, corn, rice, cotton, sorghum, beans, fruit.

Minerals: jade, gold.

Largest and most remote of China's provinces, Sinkiang experienced violent Mohammedan uprisings after 1932. The Chinese governor, Gen. Shen Shih-tsai, re-established order in 1937 with Soviet support. In 1943, Russian troops withdrew, taking with them all their economic installations, but following World War II Soviet influence was gradually restored and the province surrendered to the Chinese Communists in late 1949. On Mar. 27, 1950, the People's government signed an agreement with the U.S.S.R. providing for joint exploitation of Sinkiang's natural resources.

Chinese constitute about 5 per cent of the population; there are 14 other ethnic groups, mostly Turki tribes of the Sunni Moslem faith. The Mongol tribes are Lama Buddhists. There are vast stretches of desert and arid land, and the limited area under cultivation is mostly in oases and river valleys. The northern slopes of the Tien Shan range, which divides the province from east to west, provide rich summer grazing lands. There were in 1943,

11,720,000 sheep, 870,000 horses, 1,500,000 cattle and 90,000 camels.

Almost all of the limited foreign trade is conducted with Russia. Some caravan trade is carried on over the high passes which separate Sinkiang from India. There are no railroads, but 2,440 miles of road were built during 1932-42. An air route from Peiping to Alma Ata in the U.S.S.R. crosses the province. The largest towns are Shufu (Kashgar) (80,000) and Soche (Yarkand) (70,000), both near the western border. About 85 per cent of the population lives in the western side of the province, adjacent to the Soviet Union and separated from China by desert.

**TIBET**—Status: Nominally independent; under Chinese Communist control.

Area: 469,294 square miles.

Population (est. 1948): 3,000,000.

Capital: Lhasa (50,000).

Ruler: The 14th Dalai Lama (Lingher Pamo Töntrup).

Monetary unit: Sang.

Exports: wool, live animals, salt, hides, borax, tea, musk.

Agricultural products: barley, fruits, pulse, vegetables.

Minerals: borax, salt, coal, gold.

Tibet, north and northeast of the Himalayas, is the highest country in the world, averaging 16,000 feet in elevation and having many peaks ranging up to more than 25,000 feet. Chinese suzerainty over Tibet was established in the 18th century. The area was invaded by a British expeditionary force in 1904, but the Anglo-Russian Convention of 1907 recognized China's influence and stipulated that neither Russia nor Britain should interfere in Tibet's affairs.

The only country in the world under complete ecclesiastical control, Tibet is a theocracy ruled by the Dalai Lama (born June 6, 1935), who was invested with full powers in November, 1950.

Chinese Communist troops invaded the area in October, 1950. An agreement signed with Communist China in May, 1951, recognized the Dalai Lama as spiritual and temporal ruler but made Tibet virtually a Chinese province.

The religion and predominant factor in Tibet's social system is Lamalism, a late form of Buddhism modified by animism and primitive magic. Education is in the control of the many monasteries, some of which have more than 1,000 monks. A large number of the population are lamas, mostly celibates. Both polyandry and polygyny are practiced.

**KWANTUNG**—Status: Chinese territory under Soviet occupation.

Area: 1,444 square miles.

Population (est. 1938): 1,750,000.

Kwantung, at the southern end of Manchuria's Liaotung peninsula, was leased to

Russia by China in 1898. The lease was transferred in 1905 to Japan, which administered the territory until the end of World War II. The Chinese-Soviet treaty of 1945 provided for the return of the territory to China and for joint control of the naval base of Port Arthur; Dairen was to be a free port. The Soviet Union, however, refused to honor these provisions of the treaty and retained sole control of the area.

Port Arthur has an excellent ice-free, deep-water harbor which gives it great strategic importance. Dairen, the principal city (pop. 533,696), also has an ice-free harbor. Both Dairen and Port Arthur are connected with the Manchuria railways.

## Colombia (Republic)

(República de Colombia)

Area: 439,714 square miles.

Population (census 1951)\*: 11,477,495 (mestizo 68%; white, 20%; Indian, 7%; Negro, 5%).

Density per square mile: 26.1.

President: Lt. Gen. Gustavo Rojas Pinilla (provisional).

Principal cities (est. 1950): Bogotá, 543,590 (capital); Medellín, 264,560 (mining); Barranquilla, 255,050 (chief port); Cali, 165,200 (coffee, mining).

Monetary unit: Peso.

Language: Spanish.

Religion: Roman Catholic.

\* Preliminary figures.

**HISTORY.** Colombia, nearly nine times the size of New York state, is the only country in South America with frontage on both the Pacific and the Caribbean. Its northern coast was one of the first parts of the Americas to be visited by Spanish explorers. Darien, the first permanent European settlement on the American mainland, was founded in 1510, Santa Marta in 1525, and Bogotá in 1538.

New Granada, as Colombia was called until 1861, was comparatively neglected during the Spanish colonial era. After winning independence from Spain during a fourteen-year struggle ending in 1824, the country established a republic in 1831, including the area that now is Panamá. Intermittent civil war plagued Colombia until 1903, when Panamá, with United States backing, seceded from the republic.

The century-old boundary dispute with Peru over Leticia almost led to war in 1931, but a settlement was arranged through the League of Nations in 1934-35.

The administration of Alfonso López, Liberal president in 1934-38, introduced constitutional and labor reforms and the removal of state protection for the Roman Catholic Church. López won the presidency again in 1942 but resigned on Aug. 7, 1945. The provisional president, Alberto Lleras

Camargo, was also a Liberal, but when the Liberal party split again in the elections of May 5, 1946, Mariano Ospina Pérez, a Conservative, won.

Bogotá, host at the time to the Ninth International Conference of American States, was swept by a destructive but unsuccessful revolt on April 9, 1948, following the assassination of Jorge Eliécer Gaitán, extremist Liberal leader. The 1949 presidential election, held on Nov. 27 and boycotted by the Liberals, was won by the Conservative candidate, Laureano Gómez, who took office on Aug. 7, 1950. Gómez returned to office on June 13, 1953, after being on leave of absence since Oct. 1951, but was immediately ousted in a *coup d'état* led by Lt. Gen. Gustavo Rojas Pinilla, who became provisional president.

**GOVERNMENT AND DEFENSE.** Colombia's president, who appoints his own cabinet, is elected every four years and is not eligible to succeed himself immediately. The Senate—upper house of Congress—has 63 members elected for four years by direct vote. The House of Representatives of 123 members is directly elected for two years. All male citizens over 21 may vote.

A term of military service is compulsory for men between twenty-one and thirty. The strength of the army in 1948 was unofficially reported at 14,000. With 2,500 personnel, the navy has two modern destroyers, three sea-going gunboats, three patrol craft, four river gunboats, one frigate and several launches. An infantry battalion and a frigate served in Korea.

**SOCIAL AND ECONOMIC CONDITIONS.** Primary education is free and technically compulsory in Colombia, whose last published illiteracy figure was 48.4 per cent. By law, 10 per cent of the national budget goes for education. In 1950, 12,118 primary schools reported enrollment of 808,494 pupils, and there were 1,420 other schools with total enrollment of 126,936. In addition to the National University, founded at Bogotá, 1572, there are four departmental universities and several private ones.

Because of the former isolation of the interior, the language and manners in Bogotá are more purely Castilian than anywhere else in South America. The white race retains its social and economic dominance over Indians and Negroes, but race mixture is steadily reducing its numbers. In recent years, notably since adoption of a new labor code in 1944, the working classes have made important gains, including minimum wages, vacations and holidays, accident and sickness benefits, and the protected right of union organization.

Most of the people live by farming and cattle herding, but only a small part of the land is cultivated, and that by primi-

tive means. Colombia's coffee, by far the principal crop, is a mild variety that does not compete with Brazilian types. Exports in 1952 totalled 5,032,056 bags of 132 pounds each. Other crops include bananas, coconuts, tobacco, sugar cane, corn, cotton, cacao, beans, rice, tropical fruits and, in the temperate regions on plateaus and in mountain valleys, cereals and potatoes. Cattle were estimated at 15,512,000 in Dec. 1950, according to U. N. statistics.

The leading manufacturing industries are foodstuff processing, textiles and beverages.

To protect foreign trade balances, the government has taken over control of exports and imports. Trade statistics, in millions of pesos, are as follows:

	1950	1951	1952
Exports	771	1,093	1,180
Imports	711	872	1,006

Leading exports in 1952 were coffee (80%), petroleum (15%) and bananas. In 1951 the U. S. took 81% of the exports and supplied 89% of the imports.

Difficult terrain makes Colombia's rail and road building costly. Rail mileage was put at 1,782 (main-line track) in 1951; and improved highway mileage at 12,600.

Air transit is now well advanced, and there are 4,620 miles of navigable waterways. The national merchant marine service has been combined with those of Venezuela and Ecuador.

Colombia's 1953 budget provided for expenditures of 768,000,000 pesos. The public debt on Dec. 31, 1951, amounted to 567,055,667 pesos.

**TOPOGRAPHY, NATURAL RESOURCES AND CLIMATE.** Through the western half of the country, three Andean ranges run north and south, merging into one at the Equadorean border. The eastern half is a low, jungle-covered plain, drained by spurs of the Amazon and Orinoco, inhabited mostly by uncivilized Indians.

Colombia's mountain ranges have many lofty peaks, including Huila, 18,700 ft., and Tolima, 17,109 ft. The fertile plateau and valley of the eastern range is the most densely populated part of the country.

Rich in minerals, Colombia has the third largest oil industry in Latin America (70 per cent controlled by U. S. interests). Production in 1952 was 38,682,735 barrels. The country is also rich in platinum and has world-famous emerald mines at Muzo in the eastern Andes. Mineral production includes gold (1952: 422,231 troy ounces), silver (123,165 ounces) and crude platinum (1951: 17,157 ounces).

Colombian forests, covering a large part of the country from the western Andes to the eastern plain, are a great but little ex-

plotted source of wealth. Products include vanilla, quinine, ipecac, sarsaparilla, gums and balsams, tanning agents, dyewoods, hardwoods and rubber.

Alligators along many of the large rivers are hunted for hides. The rivers and lakes abound with fish and turtles, a source of commercial tortoise shell.

Although Colombia lies almost entirely in the north torrid zone, its climate is tempered by prevailing winds and high altitudes in the western, mountainous area. High temperatures and excessive moisture prevail in the lower areas, along the coast and in the larger river valleys. The dry season occurs in summer.

## Costa Rica (Republic)

### (República de Costa Rica)

Area: approximately 19,238 square miles. Population (est. Dec. 31, 1952): 868,741 (white and mestizo, 97%; Negro, 2%; Indian, 1%).

Density per square mile: 45.2.

President: José Figueres Ferrer.

Principal city (census 1950): San José, 86,909 (capital and only large city).

Monetary unit: Colón.

Language: Spanish.

Religion: Roman Catholic (state).

**HISTORY AND GOVERNMENT.** Costa Rica was discovered and probably named by Columbus in 1502. A Spanish province as early as 1530, it proclaimed its independence in 1821, and was a member of the Central American Union from 1823-38. Aside from boundary disputes with Panamá and Nicaragua, Costa Rica's modern history was comparatively tranquil until the spring of 1948, when a brief civil war followed congressional annulment of presidential elections in which Otilio Ulate Blanco defeated the Government candidate. Leftist-supported government forces surrendered on April 20, and on May 8 an 11-man junta took over and a Constituent Assembly was elected on Dec. 8, 1948. The Assembly met on Jan. 16, 1949, confirmed Ulate as president-elect, and, after drafting a new constitution, dissolved on Nov. 8, on which date Ulate took office. José Figueres Ferrer was elected to succeed him in the July 1953 elections.

Under the 1949 constitution the president and one-house Congress of 45 members are popularly elected for terms of four years.

The army was abolished in 1950. There is a police force of 1,000 and 700 coast guardsmen.

**SOCIAL AND ECONOMIC CONDITIONS.** Costa Rica's illiteracy rate of approximately 15 per cent is the lowest in Central America, with elementary education

free and compulsory. In 1951 there were 1,139 primary schools (116,157 pupils) and, in 1950, 24 secondary schools and 7 technical schools. The National University is at San José. The English language has been taught in all of the primary schools since 1944.

Coffee, bananas, abacá fiber and cacao are the basic products of Costa Rican agriculture, which is characterized by the prevalence of small land holdings. Cotton, sugar cane, tobacco, corn, beans, rice and potatoes are subsidiary crops. Cattle are raised mainly for dairying.

Coffee production totaled 351,049 bags of 132 lb. each in 1951-52.

Manufacturing is virtually limited to locally-consumed products. Chief among those products are furniture, fine woodwork and tobacco.

Foreign trade data (in millions of U. S. dollars) are as follows:

	1950	1951	1952
Exports	34.69	39.29	47.23
Imports	46.03	55.74	67.83

In 1951 the U. S. took 74% of the exports and supplied 66% of the imports. Coffee (56%) and bananas (27%) were the leading exports; imports included textiles, machinery, vehicles and petroleum products.

In 1948, the rail system totaled approximately 670 miles; improved highways, 1,020 miles.

The 1953 budget balanced revenue and expenditure at 181,726,380 colones. The public debt on June 30, 1953, was 362,910,000 colones.

Gold is the most valuable mineral, although silver, manganese, mercury and sulfur also exist. Oil indications have been found in the south.

The mountain slopes yield such forest products as balsa, cedar, dyewood, mahogany and rosewood. The fisheries along the coast are valuable; tuna, shark-livers and live turtles are important products of Costa Rica.

**TOPOGRAPHY AND CLIMATE.** Most of Costa Rica is elevated tableland, from 3,000 to 6,000 feet above sea level, with sharp slopes to the Caribbean and Pacific. Cocos Island, about 300 miles off the Pacific Coast, is under Costa Rican sovereignty; although it is mostly tropical jungle, it is of potential strategic importance in the defenses of the Panama Canal.

The weather is cool and refreshing in the Costa Rican highlands, with average temperatures of 68°, and San José is increasing in importance as a tourist resort. Along the coasts, the mean annual temperature is about 82°. The rainy season is usually from April or May to about December.

## Cuba (Republic)

### (República de Cuba)

Area: 44,217 square miles.

Population (census March 1953)\*: 5,814,112 (white and mulatto, 75%; Negro, 24%; Mongoloid, 1%).

Density per square mile: 131.5.\*

President: Fulgencio Batista y Zalvidar (provisional).

Principal cities (census 1943): Havana, 659,883 (capital, industrial center); Santiago de Cuba (1946 est.) 152,000 (seaport, mining); Marianao, 120,163 (suburb of Havana); Camagüey (1946 est.) 87,000 (cattle, sugar); Matanzas, 54,844 (seaport, sugar).

Monetary unit: Peso.

Language: Spanish.

Religion: Roman Catholic.

\* Preliminary figures.

**HISTORY.** The history of Cuba, largest of the many Caribbean islands, began for white men with discovery by Columbus on his first voyage in 1492. It was a Spanish colony until 1898, except for brief British occupancy in 1762-63. Open war raged between Cuban rebels and Spanish troops from 1867 to 1878. Fighting broke out again in 1895, and when the United States threatened to intervene, Spain felt its national dignity had been wounded. Strained relations between Spain and the U. S. led to war when the U. S. battleship *Maine* was blown up in Havana harbor in Feb., 1898. At the end of the brief Spanish-American War, Spain gave up Cuba.

Until creation of the Cuban republic in 1902, the island was ruled by United States military authorities. For the first thirty-two years of the republic's life, the United States held the right to intervene in any crisis—a right which was invoked during insurrections in 1906, 1912 and 1917.

Corruption bedeviled Cuba after World War I, particularly during the eight-year presidency of Gerardo Machado, who was ousted in a 1933 revolution. Five different presidents tried to rule in the next few months; out of this political whirligig came the dictatorship of Fulgencio Batista, who climbed almost overnight from army sergeant to army commander-in-chief. In 1940 Batista legalized his reign by being elected to a four-year presidential term. He was succeeded in 1944 by Dr. Ramón Grau San Martín. Carlos Prío Socarrás won the June 1948 elections and took office Oct. 10 for a 4-year term. Prío was ousted March 10, 1952, however, by Batista, the former dictator, who became provisional president on April 4.

**GOVERNMENT.** Cuba's president is elected for a 4-year term by direct popular vote, in which women take part. The Cabinet, though named by the president, is responsible to the Congress—a 54-member Senate and a 136-member House, both elected for four years. Much Cuban lawmaking is done

through presidential decree, reviewable by the Supreme Court. Cuban politics are dominated by personalities, and there are frequent shifts in political grouping.

Compulsory military service was established in 1942. The army numbers about 15,000; the navy, 5,000, manning some twenty small coastal craft. The air force has 50 combat planes. Two U. S. air bases and one naval base built in World War II at a cost of more than \$30,000,000 were turned over to Cuba in 1946. However, the United States retained its long-held naval base at Guantánamo.

**SOCIAL AND ECONOMIC CONDITIONS.** Education is free and compulsory from 7 to 14. Schools numbered about 5,400 in 1946, enrolling some 520,000 pupils. Literacy was estimated at close to 70 per cent. The University of Havana, founded in 1721, has about 15,000 students.

Half of the employed are engaged in agriculture, which normally accounts for more than 90 per cent of the exports. Often jolted by fluctuations in the price of sugar, of which it produced a record 7,963,689 short tons in 1952, Cuba is now seeking to vary its agricultural production. About two-thirds of the cultivated area is devoted to sugar cane. Other important crops are tobacco (1951-52 output: 39,000 short tons), coffee, cacao, fruits, vegetables, henequen, corn, pineapples and rice. The livestock and dairy industry has progressed greatly.

Manufactured products include sugar, molasses, syrup, brandy, rum, alcohol, cigars, cigarettes, cigar boxes, sponges, cement, cordage, salt, dressed hides, dairy products and canned goods. The leading industry is the processing of sugar cane and its products.

Foreign trade (in millions of pesos):

	1950	1951	1952*
Exports	642	766	675
Imports	515	640	618

\* Provisional.

Leading customers in 1951 were the U. S. (54%), Britain (14%) and Japan (5%). The U. S. was by far the leading supplier (77%). Leading exports were sugar and molasses (88%) and tobacco (5%).

Mainline railroads totaled 3,017 miles in 1949, plus 7,870 miles of industrial trackage, mostly on sugar estates. Improved highways totaled 2,320 miles. Domestic airlines are operated by the Cuban National Aviation Company, a Pan American subsidiary.

The budget for the fiscal year 1952-53 balanced revenue and expenditure at \$234,069,756. As of Dec. 31, 1951, the funded public debt was \$217,700,000.

**TOPOGRAPHY, NATURAL RESOURCES AND CLIMATE.** Long, narrow Cuba has

maximum dimensions of 730 by 160 miles, and is approximately the same size as Pennsylvania. It has mountainous areas in the southeast, central area and west, but the rest is flat or rolling. The coastline of more than 2,100 miles is indented by many large bays. Cuba's numerous short rivers are of slight importance commercially.

Rich mineral beds, mostly in the eastern province of Oriente, include iron, copper, manganese, chromium and nickel. Iron ore reserves, estimated at 3,500,000,000 tons, are 90 per cent held by U. S. steel interests. Virtually all mineral exports go to the United States.

Cuba has an estimated 3,500,000 acres of wooded land, with valuable cabinet woods, such as cedar and mahogany, as well as fibers, resins and oils. Lobsters, oysters, crabs and shrimp are major sea food products.

The tempering influence of the trade winds on the island's tropical climate makes Havana's average temperature 77° with a range of only 10° (71° to 81°). The dry season lasts from November to April, and the warmer wet season occurs thereafter. Mean annual rainfall at Havana is about 50 inches.

## Czechoslovakia (Republic)

(Československa Republika)

Area: 49,330 square miles (excluding Ruthenia).

Population (est. 1950): 12,340,000 (1949: Czech, 67.0%; Slovak, 23.7%; German, 3.2%; Magyar, 3.2%; Polish, Jewish and others, 2.9%).

Density per square mile: 250.1.

President: Antonín Zápotocký.

Premier: Viliam Široký.

Principal cities (est. 1948): Prague (Praha), 932,024 (capital, industrial center); Brunn (Brno), 277,196 (textiles); Ostrava (Moravska Ostrava), 183,794 (iron and steel products); (1947): Bratislava, 172,664 (Danube port); Pilsen (Plzeň), 118,152 (Skoda steel works).

Monetary unit: Koruna.

Religions (1930): Roman Catholic, 73.54%; Protestant, 7.67%; Czechoslovak Church 5.39%; Greek Catholic 3.97%; Jewish, 2.42%; others, 7.01%.

**HISTORY.** Few nations have had a more tragic history than Czechoslovakia, which twice won and lost its independence within 30 years. Born out of World War I, the young republic was an early victim of Nazi aggression in 1938-39. At its rebirth in 1945 following World War II, it enjoyed a measure of its traditional democracy under the shadow of Soviet control. During the next three years Czechoslovakia made by far the greatest economic progress of all the Soviet satellites, but the government was subjected to increasing Communist pressure, climaxed in the spring of 1948 by

the Communists' seizure of control and the resignation of President Beneš.

It was probably about the 5th century, A.D., that the ancestors of the Czechs and Slovaks settled in the region of modern Czechoslovakia. Slovakia passed under Magyar domination, but the Czechs founded the kingdom of Bohemia, which was among the most powerful in Europe for centuries. German encroachment began in the 12th century and was furthered by the election in 1526 of a Hapsburg as Bohemian king. After the Czechs rebelled in 1618 and were defeated at the Battle of White Mountain in 1620, they were ruled for the next 300 years by the Hapsburgs as part of the Austro-Hungarian Empire. In World War I, Czech patriots, notably Thomas G. Masaryk, went abroad to promote support for Czech independence, while Czech legions fought against the Central Powers. On Oct. 28, 1918, Czechoslovakia proclaimed itself a republic; shortly thereafter Masaryk was unanimously elected first president.

Between World Wars I and II, Czechoslovakia supported the League of Nations, formed the Little Entente with Yugoslavia and Rumania, and co-operated closely with France. President Masaryk resigned in 1935, two years before his death at the age of eighty-seven, and was succeeded by Dr. Eduard Beneš.

Meanwhile, the German plan of aggression was under way. Czechoslovakia's German minority, led by Konrad Henlein, began demanding autonomy. The government granted many concessions which, of course, were not enough to suit the Germans. The beginning of the end came at the Munich conference on Sept. 30, 1938, when France and Britain agreed that the Nazis could take the Czech Sudetenland on the German border. Dr. Beneš resigned on October 5, and Czechoslovakia became a federal union in the German orbit. The Poles, in the meantime, had seized Czechoslovakia's Teschen area, and Hungary had taken areas in Slovakia and Ruthenia. In March, 1939, the Nazis set up Slovakia as a puppet state, declared Bohemia and Moravia to be Nazi protectorates, and gave Hungary the remainder of Ruthenia. Both Slovakia and Bohemia-Moravia were occupied by German troops.

Czechoslovakia suffered cruelly under Nazi occupation, but Czech patriots were not deterred from widespread sabotage and slowdowns which hindered the Germans. Meanwhile, Dr. Beneš had organized a government-in-exile in London in 1940, with Jan Šrámek as Premier and himself as President. Soon after the government returned to Czechoslovakia in April, 1945, Ruthenia, the easternmost province, was ceded to Russia.

A 300-member Constituent Assembly elected on May 26, 1946, had 114 Commu-

nist members, and on July 3, 1946, Communist Klement Gottwald formed a six-party coalition cabinet. Amid increasing pressure from Moscow, Gottwald's cabinet remained in office until the bloodless *coup d'état* of Feb. 23-25, 1948, when the Communists seized complete control. President Beneš stayed on until June 7, when he resigned following parliamentary elections in which the Communists and their allies were unopposed. Parliament elected Gottwald to the presidency, and Communist Antonín Zápotocký succeeded to the premiership. Beneš died Sept. 3, 1948. Again the Czechs had lost their hard-won liberties, and the government began a systematic suppression of democracy. On the death of Gottwald Mar. 14, 1953, Zápotocký became president and Viliam Široký was named premier.

**GOVERNMENT AND DEFENSE.** Czechoslovakia's Soviet-type constitution, promulgated on June 8, 1948, makes the 300-member unicameral Parliament the supreme organ of the state with control over courts and civil service. The government is headed by the president, elected by Parliament for a seven-year term, and the prime minister and his cabinet who are appointed by the president but are responsible to Parliament. The constitution contains nominal guarantees of civil liberties and provides that the state shall conduct all economic activity in the public interest on the basis of a single economic plan. Provision is made for limited Slovak autonomy under an elected council of 100 members.

The army, based on a cadre of Czech units which fought with the Red Army during World War II, has been trained and equipped by the Soviet Union with organization and armament on its pattern. Estimated strength is 300,000, including police.

**SOCIAL AND ECONOMIC CONDITIONS.** Illiteracy is low in Bohemia, higher in Slovakia. In 1951-52 there were 12,433 elementary schools with over 1,000,000 pupils, 2,280 higher grade schools with 473,000, 292 secondary schools with 75,000, and 1,243 vocational schools with 96,000. The 17 institutions of higher learning had 54,900 students.

One of the country's greatest problems is the ethnic variety of its population. In view of the traitorous role played by German and Hungarian minorities in the disintegration of Czechoslovakia in 1938-39, the government decided to expel them from the country. Many Hungarians, however, were permitted to remain.

Decrees of the government issued on Oct. 24, 1945, ordered the nationalization of almost all industrial corporations with more than 500 employees. All national resources, public utilities, transport, commercial banks and insurance companies became

state property. Other laws enacted April 28, 1948, nationalized all enterprises employing more than 50 as well as concerns of any size operating in key industries.

Distribution of large estates had already been accomplished following World War I by the 1919 Land Reform Law, which made it illegal for one person to own more than 370 acres of arable land. The social insurance system covers accident, sickness, disability, old age and death.

Approximately 41 per cent of the total area is arable, 31 per cent forest, and 15 per cent meadows and pastures. Sugar beets (1949: 4,466,000 metric tons), wheat (1950: 1,590,000 tons), corn and high-grade barley and hops for beer brewing are cultivated in the low-lying areas. In more elevated regions, the cultivation of potatoes (1950: 7,484,000 tons), rye (1,250,000 tons) and oats predominates. Higher lands are also used for growing fodder crops or for grazing. In 1951 there were 4,100,000 cattle and 3,700,000 hogs and, in 1950, 480,000 sheep and 640,000 horses.

The highly developed position of Czech industry is important in foreign trade, since production far exceeds domestic needs. Agricultural products, led by sugar, provide raw materials for important industries. The beer industry has attained world-wide repute, and there are also spirits, malt and foodstuffs industries. Abundance of coal and presence of iron ore give the country a big metallurgical industry. Steel production was unofficially estimated at 3,550,000 metric tons in 1952. The Skoda steel works at Pilsen are one of the largest in Europe.

Other industries are glass, porcelain and pottery making, while large forest areas provide raw material for the timber, paper and cellulose industries. Also highly developed are the textile industries, including cotton, wool, flax and jute production, and the shoe industry. The famous Bat'a shoe factories are at Zlín. Industrial employment, exclusive of building, totaled 1,395,000 in June, 1949.

Foreign trade is now a state monopoly managed by government corporations. Statistics, in billions of koruny, are as follows:

	1947	1948	1949
Exports	28.55	37.65	40.31
Imports	28.92	37.72	39.40

Leading exports in 1948 were iron and steel manufactures, 16.6 per cent; machinery (except electrical), 9.8 per cent; cotton textiles, 7.7 per cent; glass, 6.1 per cent; and vehicles, 6.0 per cent. Chief imports were cotton, 8.1 per cent; maize, 5.3 per cent; and chemical products, 4.2 per cent. Leading customers were the U.S.S.R., 16.0 per cent; Poland, 7.0 per cent; Yugoslavia, 6.9 per cent; and the Netherlands, 6.4 per cent. The chief suppliers were the U.S.S.R.,

15.6 per cent; Britain, 10.1 per cent; and Yugoslavia, 6.3 per cent. Reorientation of trade from west to east was virtually complete.

The disadvantages of Czechoslovakia's landlocked position are offset somewhat by a well-developed system of internal communications. Czech railroads, totaling 8,200 miles in 1948, form a direct connection between the systems of eastern and western Europe, making the country an important communications center. Highway mileage totaled 39,560.

Navigable streams total 1,156 miles in Bohemia-Moravia, and 111 miles in Slovakia. Internal waterways and rivers connect Czechoslovakia with the Black Sea and the North Sea.

Recent national budget estimates have been as follows (in billions of koruny):

	1951	1952	1953
Revenue	166.5	324.3	435.2
Expenditure	166.2	323.5	403.9

National debt (Dec. 31, 1948): internal, 100,531,739,000 koruny; external, 20,318,953,000 koruny.

Most important of Czechoslovakia's varied minerals are pit coal and lignite, with the principal coal fields in the Ostrava-Karvinná area, connected with the Polish fields of Upper Silesia. Production in 1952 was estimated at 19,700,000 metric tons of hard coal and 33,000,000 tons of lignite.

Production of iron ore in 1950 was 1,600,000 tons, but much ore is imported to meet the demands of Czechoslovakia's flourishing iron and steel industry. Excellent porcelain raw materials, particularly kaolin, are obtained in western Bohemia and southern Moravia. Other minerals are antimony, gold, magnesite, oil, uranium, silver and zinc.

Czechoslovakia is one-third wooded and is one of the richest forest lands in Europe, with a high production of lumber.

**TOPOGRAPHY AND CLIMATE.** A long and narrow country, with a length of 594 miles from east to west and a width varying from 45 to 175 miles, Czechoslovakia lies athwart the great central European watershed between the Baltic, Black and North Seas. Mountains form several of its boundaries—the Carpathians by Poland on the northeast, the Böhmer Wald by Austria on the southwest, and the Erzgebirge and the Sudetens by Germany on the northwest and north. Many of the valleys are made fertile by the Danube, Elbe and Vltava (Moldau) rivers and their tributaries. The Elbe and Danube are usually icebound for six to eight weeks each year.

At Prague, in Bohemia, the average annual temperature is 48.2° (29.6° in January; 66.2° in July) and the average annual

rainfall is 19.6 inches. The corresponding figures for Presov, in eastern Slovakia, are 46.8° and 25.6 inches. Heavy winter snowfall is common in the highlands.

## Denmark (Kingdom)

### (Kongeriget Danmark)

Area: 16,575 square miles.

Population (est. Jan. 1, 1953): 4,347,400 (almost entirely Danish).

Density per square mile: 262.3.

Sovereign: King Frederick IX.

Prime Minister: Erik Eriksen.

Principal cities (est. 1952): Copenhagen, 764,100 (capital); Aarhus, 116,800 (shipbuilding); Odense, 102,400 (meat, dairy products); Aalborg, 80,200 (seaport).

Monetary unit: Krone.

Language: Danish.

Religion: Evangelical Lutheran (state).

**HISTORY.** Denmark—comprising a peninsula and 500 islands in the Baltic Sea—is a vast produce farm, less than half the size of Indiana.

A tiny nation today, Denmark once was powerful and feared. After conversion of the Danes to Christianity in the 9th and 10th centuries, Canute the Great, King of Denmark, conquered England in 1015. In the 12th and 13th centuries, under Kings Valdemar I and II, Denmark reached the zenith of its power. By the terms of the Union of Kalmar in 1397, the nation was united with Norway and Sweden. Sweden left the Union in 1520, but Denmark and Norway remained united until 1814. In the Napoleonic Wars Denmark picked the wrong side; when Napoleon was defeated, Norway was given to Sweden and Helgoland to Britain in 1814. Denmark lost again in 1864 when, after a war with Austria and Prussia, it lost Holstein, Schleswig and Lauenburg to Prussia.

The country, which had become a liberal constitutional monarchy in 1849, stayed neutral in World War I, after which a plebiscite returned to it a part of North Schleswig. In 1917 Denmark sold the Virgin Islands to the United States for \$25,000,000.

The Social Democrats, moderately socialistic, dominated Danish politics in 1924-26 and 1929-40 during an era marked by active participation in the League of Nations and close harmony with Norway and Sweden.

On May 31, 1939, eager for peace, Denmark signed a ten-year non-aggression pact with Germany. Less than a year later, on April 9, 1940, Germany invaded neutral Denmark. The British countered by occupying the Faeroe Islands and Iceland. Iceland declared its complete independence from Denmark in 1944, thus breaking a union which had existed since 1280.

To save the country from destruction, King Christian X accepted the German

occupation without armed resistance, and the Danish policy became one of passive resistance against Hitler's attempts to form a "model protectorate." During 1944-45, the Danish underground became increasingly active and effective.

Following the German surrender in 1945, the Danes quickly took over their government again with Social Democrat Vilhelm Buhl as prime minister. Buhl resigned when his party lost ground in the national elections of Oct. 30, 1945, and the King designated Liberal leader Knud Kristensen to form a new all-Liberal cabinet in Nov., 1945. Kristensen lost the confidence of the Folketing in Oct., 1947, as a result of his advocacy of a plebiscite in South Schleswig (Germany) looking toward annexation of at least part of the region to Denmark. The Social Democrats increased their plurality in the resulting elections, and on November 11, Hans Hedtoft was named prime minister. His party won the largest block of seats in the September, 1950, elections but was forced to yield the next month to a Liberal-Conservative cabinet headed by Erik Eriksen, a Liberal.

**RULER.** Frederick IX, of the house of Schleswig - Holstein - Sonderburg - Glücksburg, born March 11, 1899, became king April 20, 1947. In 1935 he married Princess Ingrid of Sweden, by whom he has three daughters: Margrethe (heiress apparent, born April 16, 1940), Benedikte (born 1944) and Anne-Marie (born 1946). The King's uncle is King Haakon VII of Norway.

**GOVERNMENT AND DEFENSE.** Under the constitutional act of 1915, amended in 1920 and 1953, Denmark is a constitutional hereditary monarchy. Legislative power rests jointly with the king and the unicameral Folketing of 179 popularly-elected members, two of whom represent the Faeroes and two, Greenland. The Folketing is elected for four years but is subject to earlier dissolution by the king. The constitution authorizes the transfer of some sovereign powers to international organizations under certain circumstances. The cabinet, presided over by the king, who designates the prime minister, is the highest executive power, handling new bills and important measures.

The lineup in the Folketing (elections of April 21, 1953, under former constitutional provisions) was Social Democrat 61, Agrarian Liberal 33, Conservative 26, Radical Liberal 13, Single Taxer 9, Communist 7, Faeroe representatives 2.

Military service is compulsory. The army, numbering about 12,000, has been re-equipped with British assistance. The navy has 10 large torpedo boats, 3 submarines, 3 frigates, 1 corvette and several smaller craft. Personnel numbers 6,000.

**SOCIAL AND ECONOMIC CONDITIONS.** Under the Danish system, schooling is compulsory from 7 to 14 and, for the most part, free. The famous popular high schools (*folkehøjskoler*) for adults number 55, all private but assisted by the state. The Royal University of Copenhagen, founded in 1479, has about 6,500 students and that of Aarhus about 1,100. Elementary, middle and secondary schools in 1950-51 had about 530,000 students.

Social legislation is well advanced and provides for medical aid, poor relief, child welfare and workmen's compensation. The National Insurance Act requires everyone from 21 to 60 to belong to an approved sickness benefit society, to which the state also contributes. The co-operative movement is also well organized.

Approximately ninety per cent of the land is productive and about three-quarters is actually farmed. Agrarian reform laws have operated to bring about a large number of small holdings. About two-fifths of the cultivated area is devoted to cereals, led by barley, mixed grain, oats, rye and wheat. Root crops (fodder), potatoes and sugar beets also are important. The principal source of exports and of the nation's wealth is dairy farming and the production of bacon and pork (1952: 380,700 metric tons), butter (154,300 tons), beef and veal (179,400 tons), eggs (123,900 tons), cheese (86,200 tons) and milk (4,998,000 tons). Livestock in 1952 included 3,057,000 cattle, 3,632,000 hogs and 24,050,000 poultry. Total value of farm and dairy production in 1952 was about 6,293,000,000 kr.

Denmark produces primarily for home consumption, though some industrial products, such as Diesel motors, are large exports. The largest industries are food-processing and iron and metal. Others include chemical and pharmaceutical, wood and paper, clothing, textiles, machinery, beverages and leather.

Trade statistics, in millions of kroner:

	1950	1951	1952
Exports	4,592	5,793	5,864
Imports	5,890	6,993	6,645

Leading suppliers in 1952 were Great Britain (27%), Germany (16%), Sweden (9%) and the U. S. (8%). Chief customers were Great Britain (38%), Germany (14%), Sweden (5%) and Norway and the U. S. (each 4%). Leading exports were dairy products, largely butter and eggs (27%), meat and products (25%), machinery (10%) and live meat animals (5%). Leading imports included coal, coke, petroleum and products, machinery, vehicles and textiles.

The Danish merchant marine, one of the largest in the world on a per-capita basis, had 695 larger ships of 1,390,518 gross tons on June 30, 1952. Regular communications

with foreign countries are mainly westward by sea. There are Swedish ferry services from Copenhagen to Malmö and from Helsingör (Elsinore) to Helsingborg.

The main land route to the rest of the continent is the railway via Padborg and Schleswig to Hamburg. Railway mileage totals about 3,050, nearly half nationalized. Train-ferry services for inter-island communication are highly organized. Motor transport also is well advanced, with about 35,000 miles of roads.

Recent public-finance data are as follows (in millions of kroner):

	1951-52	1952-53*	1953-54†
Revenue	2,576	2,798	2,723
Expenditure	2,556	2,793	2,883

\* Preliminary. † Budget estimate.

The state debt proper on March 31, 1952, was 5,098,000,000 kr., of which 3,162,000,000 kr. represented the internal debt.

Mineral resources are negligible, although some coal, granite and kaolin are found on the island of Bornholm. Large quantities of coal and coke must be imported. Peat bogs supply an important source of fuel. Forest resources are unimportant.

The fishing industry, centered at Copenhagen but carried on also in the shallow fiords and in the deeper waters of the Baltic, North Sea and Skagerrak, is a basic part of the Danish economy. The 1952 catch of about 289,000 metric tons was valued at 185,400,000 kr. Normally about two-thirds of the catch is exported.

**TOPOGRAPHY AND CLIMATE.** Denmark, only three miles from Sweden at the closest point, consists of the Jutland peninsula and the islands in the Baltic. The largest islands are Zealand, the site of Copenhagen; Fünen; and far to the east, Bornholm. The narrow waters to the north are called Skagerrak; and to the east, Kattegat.

The terrain of the whole kingdom is low but not flat. Its highest point is about 500 feet, and there are many lakes, ponds and short rivers. Sand dunes line the western Jutland coast almost without a break.

Denmark's climate is like that of eastern England, but with colder winters and warmer summers. The average annual temperature is 45.2° (61° in July; 32° in January). Average rainfall is 24 inches; thunderstorms are frequent in summer.

## Outlying Territories

**FAEROE ISLANDS**—Status: Autonomous part of Denmark.

Area: 540 square miles.

Population (1951): 31,664.

Capital: Thorshavn (population 3,611).

Government: Danish-appointed governor and locally-elected assembly.

Principal products: cod, whale oil, cod liver oil, wool, fertilizers, skins and leather.

This group of 21 islands, lying in the

North Atlantic about 200 miles northwest of the Shetland Islands, joined Denmark in 1386 and has since been part of the Danish kingdom. The islands were occupied by British troops during World War II, after the German occupation of Denmark. The principal pursuits are fishing and sheep grazing. The Faeroes have home rule under a bill enacted in 1948; they also have two representatives in the Danish Folketing.

**GREENLAND**—Status: Integral part of Kingdom of Denmark.

Area: 839,782 square miles (almost 85 per cent glacier).

Population (est. 1950): 23,019 (native except for 941 Europeans).

Capital: Godthaab (second governor's seat, Godhavn).

Governor: Poul Hugo Lunsteen.

Principal products: cryolite (exports to U. S. [1950], 15,200 tons; to Denmark [1947], 20,900 tons), fish, hides and skins, whale and fish oil, marble.

Greenland, the world's largest island, was colonized in 985-86 by Eric the Red. Danish sovereignty, which covered only the west coast, was extended over the whole island in 1917. In 1941 the United States signed an agreement with the Danish minister in Washington, placing it under U. S. protection during World War II but maintaining Danish sovereignty. A definitive agreement for the joint defense of Greenland within the framework of NATO was signed on April 27, 1951.

Under 1953 amendments to the Danish constitution, Greenland is part of Denmark and has two representatives in the Danish Folketing. There is a popularly elected council.

Greenland is the world's only source of natural cryolite, important in the manufacture of aluminum. Trade (except cryolite) is a Crown monopoly. Large deposits of lead, zinc and wolfram were found on the eastern coast in 1948-52.

## Dominican Republic (República Dominicana)

Area: 19,327 square miles.

Population (est. 1951): 2,167,000 (mestizo and mulatto, 70%; white, 15%; Negro, 15%).

Density per square mile: 112.1.

President: Héctor Trujillo y Molina.

Principal cities (census 1950\*): Ciudad Trujillo, 181,533 (capital; sugar); Santiago de los Caballeros, 56,192 (tobacco); San Pedro de Macoris, 19,994 (sugar port); Puerto Plata, 14,419 (seaport).

Monetary unit: Dominican peso.

Language: Spanish.

Religion: Roman Catholic.

\* Preliminary.

**HISTORY AND GOVERNMENT.** The Dominican Republic (formerly San Domingo) occupies the eastern two-thirds of the is-

land which Columbus named La Española (now Hispaniola) when he discovered it on his first voyage in 1492. The other third is occupied by the republic of Haiti. The capital, Ciudad Trujillo, founded in 1496, is the oldest white settlement in the Western Hemisphere.

The Dominican Republic was variously under Spanish, French and Haitian domination until it established its independence in 1865 and then plunged into an unstable political history. U. S. Marines occupied it from 1916 to 1924, when a new constitution was adopted. In 1930, Rafael Leónidas Trujillo y Molina, an army general, was elected president. In office most of the time during the succeeding 22 years, he brought about improved irrigation, roads, sanitation and schools. His brother, Héctor, was elected unopposed to succeed him in May 1952.

The president is elected every five years by popular vote in which women take part, and he is eligible to be re-elected indefinitely. The 21-member Senate and the 47-member Chamber of Deputies are also elected for five years. Each of the eighteen provinces has an appointed governor. There is a 12,000-man army, a small air force and several coast patrol craft.

**SOCIAL AND ECONOMIC CONDITIONS.** Education is free and compulsory from 7 to 14. In 1951, there were 2,749 schools with 262,499 students. The University of Santo Domingo had 2,254 enrolled.

Primarily agricultural, the country produces sugar (1951-52: 658,000 short tons), coffee (400,000 bags of 132 lb. each), cacao (30,000 short tons), tobacco, bananas, rice, corn, cassava, beans, sweet potatoes.

The raising of hogs and cattle has been expanded recently and the government is attempting to diversify crops to lessen the republic's dependence on sugar exports. Sugar refining, largely U. S. controlled, is the only important manufacture.

Foreign trade (in millions of pesos):

	1950	1951	1952
Exports	86.8	118.7	115.0
Imports	43.6	58.6	57.6

Leading exports in 1951 were sugar (47%), coffee (16%), cacao (15%) and tobacco (5%). Chief customers were Britain (46%) and the U. S. (44%). The main imports, mostly from the U. S., are cotton goods, iron and steel products, chemicals and machinery.

Transit facilities include about 170 miles of public railway, more than 600 miles of sugar plantation railway, and more than 3,000 miles of highway.

The 1953 budget totaled \$89,000,000. The Republic's internal debt was retired in July, 1947; the internal debt was \$22,987,361 on Dec. 31, 1951.

Mineral resources are limited and production is negligible. Some gold and gypsum are produced for export. The more readily accessible timberland has been thoroughly exploited, producing mahogany, lignum vitae and pine.

**TOPOGRAPHY AND CLIMATE.** Crossed from northwest to southeast by a mountain range with maximum elevations exceeding 10,000 feet, the country has fertile, well-watered land on the northeast side, where nearly two-thirds of the population lives. The southwest part is arid and with poor soil except around Ciudad Trujillo. The country has many good harbors.

There is little range in temperature, with mean January average of 74°, and August average of 81°. The elevated interior is cooler than the coastlands. Rainfall occurs mostly from May to November.

## Ecuador (Republic) (República del Ecuador)

Area: 104,510 square miles.

Population (census 1950): 3,202,757 (60% pure Indian, 25% mestizo, 15% white).

Density per square mile: 30.6.

President: José María Velasco Ibarra.

Principal cities (census 1950): Guayaquil, 258,966 (chief port); Quito, 209,932 (capital); Cuenca, 39,983 (trading center); Ambato, 31,312 (commercial center).

Monetary unit: Sucre.

Languages: Spanish, Quéchua.

Religion: Roman Catholic.

**HISTORY.** Mostly forested and mountainous and a little larger than Colorado, Ecuador has a long history replete with the forceful rule of dictators. The Spanish under Francisco Pizarro conquered the land in 1532 by defeating the Inca Atahualpa. The first revolt against Spain occurred in 1809, but the victory was not complete until the Battle of Pichincha on May 24, 1822. Ecuador then joined Venezuela and Colombia in a confederacy founded by Simón Bolívar and known as Colombia, but withdrew amicably and became independent in 1830. The country's subsequent history has been largely one of dictatorships, notably under Juan José Flores, Gabriel García Moreno and Eloy Alfaro. Since 1900, administrations have fallen, usually by force, on the average of every two years. Shortly before the 1944 elections, President Carlos Arroyo del Río was forcibly replaced by José Velasco Ibarra, recalled from exile in Colombia. Velasco Ibarra, confirmed in office by the voters later in the same year, followed the old pattern by assuming the role of dictator in 1946 and suppressing opposition.

Velasco was deposed in Aug. 1947, and after three weeks of confusion Carlos Julio Arosemena took over as provisional presi-

dent until Sept. 1, 1948, when Galo Plaza Lasso, victor in the June 6 elections, took office. Velasco was returned to office in the June 1952 elections.

For more than a hundred years, Ecuador disputed its boundary with Peru, frequently resorting to arms. After hostilities started again in 1941, both nations submitted to mediation, and in 1944 Ecuador lost most of the disputed area. The dispute broke out anew in 1951.

**GOVERNMENT AND DEFENSE.** Under the 1946 (16th) constitution, Ecuador elects a president for four years by direct vote, and he is ineligible for further service until at least one term intervenes. The congress is bicameral, with a Senate and Chamber of Deputies. There are 17 provinces and one territory, the Galápagos Islands (3,029 sq. mi.), 650 miles off the coast.

Military service is compulsory at eighteen. The army numbers 10,000 and 40,000 reserves. A 1,030-ton training ship and several smaller craft make up the navy. There is an aviation school at Guayaquil and also a naval school at Salinas. To strengthen the Panama Canal, the U. S. built a base on Galápagos during World War II; it reverted to Ecuador in 1946.

**SOCIAL AND ECONOMIC CONDITIONS.** Education is free, compulsory and under state control, but illiteracy is very high—an estimated 60 per cent in 1948. School enrollment in 1949-50 was put at 320,931 in 3,291 public and private primary schools and at 27,396 in 156 secondary schools. There are universities at Quito (2), Guayaquil and Cuenca, and a law school at Loja.

Although agriculture is the basis of Ecuador's economy, less than 12,000,000 acres are devoted to it. Cacao, the chief crop (1951-52: 22,100 short tons) is grown in coastal regions and lower river valleys, along with rice, sugar cane, coffee, bananas, tobacco and cotton. The plateaus and mountain valleys are used for grazing and dairying, and raising cereals and potatoes. After textiles, one of Ecuador's main industries is the manufacture of Panama hats, made of Toquilla straw.

Foreign trade (in millions of sucres):

	1950	1951	1952*
Exports	878	852	1,187
Imports	564	826	848

\* Provisional.

In 1952 the U. S. took 54% of the exports and supplied 66% of the imports. Chief exports in 1952 were bananas (28%), coffee (26%) and cacao (22%).

Railway mileage in operation in 1949 was 693, all nationalized. The principal road connects the chief port, Guayaquil, with Quito. Highway mileage in 1947 was 2,712.

The 1952 ordinary budget was estimated at 465,000,000 sucres. The foreign debt on

Nov. 30, 1952, was \$43,559,000; the internal debt, 131,971,000 sucres.

Ecuador mined 18,515 troy. oz. of gold and 82,200 oz. of silver in 1952. Copper and lead are also mined. In 1952, 2,839,430 barrels of petroleum were produced. The country is the world's chief source of light, strong balsa wood, and exported 4,456 metric tons in 1952. Exports of rubber—1,968 metric tons in 1945—were only 36 tons in 1952. Dye wood, cinchona bark, kapok and vegetable ivory are other products of the vast forest.

**TOPOGRAPHY AND CLIMATE.** Two high and parallel ranges of the Andes, traversing Ecuador from north to south, are topped by tall volcanic peaks including Chimborazo (20,557 feet) and Cotopaxi (19,344). The region between the mountains and the coast is rich but extremely hot and swampy; beyond the mountains to the east is the rainy, forested and tropical Amazon plain, largely uninhabited.

Though Ecuador, as its name implies, lies on the equator, its climate ranges from tropical and temperate to the Arctic conditions of its snow-capped peaks. Temperatures on the coast average 83°; on the Andean plateau, about 46° to 70°. The rainy season extends from December through April or May.

## Egypt (Republic)

(Misr)

Area: approximately 383,000 sq. mi.

Population (est. 1951): 20,729,000 (1944: Egyptian, 95.4%; Arabian, 1.7%; Greek, 6%; others, 2.3%).

Density per square mile: 54.1.

President (provisional) and Premier: Mohammed Naguib.

Principal cities (census 1947): Cairo, 2,100,506 (capital); Alexandria, 925,081 (chief port); Port Said, 178,432 (Suez Canal terminus); Tanta, 139,965 (railroad center, Nile delta); Mansūra, 102,709 (cotton).

Monetary unit: Egyptian pound (£E).

Language: Arabic.

Religions: Mohammedan, 91%; Christian (mostly Copt and Greek Orthodox), 7%; others, 2%.

**HISTORY.** Egypt, half again the size of Texas, and the largest and most influential of the Arab states, has been an object of big-power controversy for centuries.

Egyptian history dates back to about 4000 B.C., when the kingdoms of upper and lower Egypt, already highly civilized, were united. Egypt's "Golden Age" coincided with the 18th and 19th dynasties (16th to 13th centuries B.C.), during which the empire was established. Persia conquered Egypt in 525 B.C.; Alexander the Great subdued it in 332 B.C., and then the dynasty of the Ptolemies ruled the land until 30 B.C., when Cleopatra, last of the line, com-

mitted suicide and Egypt became a Roman province. From 641 to 1517 the Arab caliphs ruled Egypt, and then the Turks took it and made it part of their Ottoman Empire. Napoleon's armies occupied the country from 1798 to 1801. In 1805, Mohammed Ali, leader of a band of Albanian soldiers, became Pasha of Egypt, founding the present line of rulers. After completion of the Suez Canal in 1869, the French and British took increasing interest in Egypt.

British troops occupied Egypt in 1882, and British resident agents became its actual administrators, though it remained under nominal Turkish sovereignty. On Dec. 18, 1914, this fiction was ended and Egypt became a British protectorate.

Pressure by Egyptian nationalists forced Britain to declare Egypt an independent, sovereign state on Feb. 28, 1922, although the British reserved rights for the protection of the Suez Canal and the defense of Egypt. On Aug. 28, 1936, by an Anglo-Egyptian treaty of alliance, all British troops and officials were to be withdrawn, except from the Suez Canal zone. When World War II started, Egypt remained neutral. But it early became a strategic base for Allied forces, both because of its key location for countering German offenses in North Africa and because of the vital importance of the Suez Canal. British imperial troops finally ended the Nazi threat to Suez in 1942 in the decisive battle of El Alamein, west of Alexandria.

British troops were evacuated from Cairo and Alexandria in 1946, but Anglo-Egyptian negotiations for revision of the 1936 treaty broke down after British refusal to recognize Egyptian sovereignty over the Anglo-Egyptian Sudan. Egypt brought the problem before the U. N. Security Council on Aug. 5, 1947, but the Council advised resumption of direct negotiations.

In March, 1942, the Wafd (Nationalist) party won the elections and controlled the government until its cabinet was dismissed by the king in October, 1944. Ahmed Maher Pasha, leader of the Saadist party (an offshoot of the Wafdists), formed a coalition cabinet of all parties except the Wafd. He was assassinated in 1945. A series of coalition cabinets held office thereafter until Jan. 1950, when general elections resulted in an overwhelming victory for the Wafd party. Mustapha Nahas Pasha took office Jan. 12, 1950, heading an all-Wafd government.

In Oct. 1951, Egypt abrogated the 1936 treaty and the 1899 agreement on the Sudan. Rioting and attacks on British troops in the Suez canal zone followed, reaching a climax in Jan. 1952. Nahas Pasha was dismissed Jan. 27, 1952.

The army, led by Gen. Mohammed Naguib, seized power on July 23, 1952. On

July 26, King Farouk abdicated in favor of his infant son. Naguib took over the premiership on Sept. 7, 1952, and promised far-reaching reforms. The monarchy was abolished and a republic proclaimed on June 18, 1953, with Naguib holding the posts of both provisional president and premier.

**GOVERNMENT AND DEFENSE.** A new constitution is to be drafted during a 3-year transitional period beginning in 1953, after which a popular referendum will be held to choose between a presidential and a parliamentary form of republican government. Under the former constitution the bicameral parliament had a senate of 177 members, two-fifths of whom were appointed by the king and the rest popularly elected for 10 years (half renewable every five years); and a Chamber of Deputies of 319 members popularly elected by universal male suffrage for five years unless sooner dissolved by the king.

Under the Anglo-Egyptian Treaty of 1936 the peacetime strength of British troops in the Suez Canal zone was set at 10,000, with 400 air force personnel, but no limit was set in time of war or international emergency. Military service for Egyptians is compulsory. The Egyptian army, strengthened and modernized during World War II, has about 160,000 men, including police units under military control. The air force has about 150 combat planes, and the navy has several small vessels.

**SOCIAL AND ECONOMIC CONDITIONS.** Education is compulsory between the ages of 7 and 12. In 1950-51 there were 6,583 elementary schools with attendance of 1,332,543, and 177 secondary schools with 126,176 students. The University Mosque of el-Azhar in Cairo (founded A.D. 972) is the chief theological seminary of the Moslem world. The University of Fuad I in Cairo (founded 1908), the University of Farouk I in Alexandria (founded 1943) and the University of Ibrahim I had a total of 30,910 students in 1950-51.

The majority of the people are Sunni Moslems. The Christians are mainly Copts with an admixture of Armenian, Syrian and Maronite sects. The population divides generally into fellahin (peasantry) and townspeople of the same blood, the Bedouin or nomad Arabs of the desert, and the Berbers, who occupy the Nile valley between Aswan and Dongola. The foreigners are chiefly Greeks (whose main center is Alexandria), French, British and Italians.

Egypt has one of the highest birth rates in the world (often more than 40 per 1,000 population) and one of the highest death rates. The density of the population in the small inhabited area in the Nile valley and delta (about 13,600 sq. mi.) is far greater than that of the Netherlands or Belgium.

Agriculture is the chief industry, engaging more than half the population. Only about 3.5 per cent (8,620,850 acres) of the total area is arable, and only about 6,040,000 acres are actually under cultivation, almost entirely in the Nile valley and delta. More than half the cultivated area comprises farms of less than 20 acres. Irrigation is indispensable to agriculture; the Aswan reservoir above the first cataract of the Nile holds up to 5,500,000,000 cubic meters of water and that of Gebel Aulla, in the Anglo-Egyptian Sudan, 2,000,000,000 cubic meters. In the delta and in middle Egypt, where perennial or canal irrigation is possible, two or three crops a year can be grown. The chief cash crop is cotton, of which Egypt is one of the world's leading producers.

Production statistics for 1952 were as follows: wheat, 1,089,000 metric tons; maize, 1,491,000 tons; rice (paddy), 507,000 tons; sugar, 210,000 tons; cotton (1951-52), 362,612 tons.

Other crops include beans, garden crops, dates and grapes. The pastoral industry is relatively unimportant except to the Bedouins in the eastern desert. In 1947 there were 1,317,639 cattle, 1,238,756 buffalo (used to turn water wheels for irrigation), 1,868,261 sheep, 1,473,840 goats, 196,084 camels and 1,124,961 donkeys.

Industry includes sugar refining, cotton ginning, cement manufacture, milling and pottery, soap and perfume making. The Sugar Company of Egypt holds a monopoly on the sugar refining industry.

Foreign trade statistics (in millions of Egyptian pounds) were as follows for the years 1950 to 1952:

	1950	1951	1952
Exports	175.4	203.1	145.1
Imports	196.5	232.1	211.7

In 1952, Egypt's chief customers were France (13%), the U. S. (12%), Italy (11%) and Germany (8%). Leading suppliers were the U. S. (16%), Britain (14%), Canada (9%) and France (7%). Raw cotton (87%) was the chief export. Imports included wheat, petroleum, fertilizers, iron and steel products, textiles and machinery and vehicles.

Navigable throughout its course in Egypt, the Nile is used largely as a means of cheap transport for heavy goods. The principal port is Alexandria. Railway mileage in 1949 totaled 5,235. Branch lines link Cairo and Alexandria with Suez and nearly every town in the delta. Highway mileage was 3,870 in 1948. Cairo is a major airport. The merchant marine had 59 ships (100 tons and over), aggregating 92,803 gross tons, on June 30, 1952.

Budget estimates for the fiscal year 1953-54 balanced revenue and expenditure

at £E208,000,000. The public debt was £E148,000,000 on Dec. 31, 1949.

The most important minerals are manganese ore (1951: 155,400 metric tons), phosphate (1952: 527,100 tons) and petroleum (1952: 16,700,000 barrels). Gold, iron ochres, nickel, sodium carbonate, sulfate talc and tungsten also are mined.

Egypt has no forests. Total value of fishery products is about £E2,000,000 annually, representing a catch of 50,000 metric tons. The chief fishing ground is Lake Menzala in the delta, but fish are also caught along the coast of the delta, as well as in the Nile.

**TOPOGRAPHY AND CLIMATE.** Egypt, at the northeast corner of Africa, is a very rough square, with the historic Nile flowing northward through its eastern third. On either side of the Nile valley are desert plateaus, spotted with oases. In the north, toward the Mediterranean, plateaus are low, while south of Cairo they rise to a maximum of 1,015 feet above sea level. At the head of the Red Sea, at the northeast corner of Egypt, is the triangular Sinai peninsula, between the Suez Canal and Palestine.

The Nile delta starts 100 miles south of the Mediterranean and fans out to a sea front of 155 miles between Alexandria and Port Said. From Cairo north, the Nile branches into many streams, the principal of which are the Damietta and the Rosetta, joined by a network of canals.

Except for a narrow belt on the Mediterranean, Egypt lies in an almost rainless area, in which high daytime temperatures fall quickly at night. The mean temperature at Cairo varies between 53° in January and 84° in July; at Alexandria, between 57° in January and 81° in July. South of Cairo, pure desert conditions prevail; at Aswan the mean maximum temperature is 118°.

**SUEZ CANAL.** The Suez Canal, in Egyptian territory between the Arabian Desert and the Sinai peninsula, is an artificial waterway about 100 miles long between Port Said on the Mediterranean and Suez on the Red Sea. Construction work, directed by the French engineer Ferdinand de Lesseps, was begun April 25, 1859, and the canal was opened Nov. 17, 1869. The cost was 432,807,882 francs. The concession is held by a French company, *Compagnie Universelle du Canal Maritime de Suez*, in which the British government holds 295,026 out of a total of 652,932 shares. The concession expires Nov. 17, 1968, when it will revert to the Egyptian government. An agreement signed March 7, 1949, provided for greater Egyptian participation in management and profits. On the board of management of the canal are 1 Dutch, 1 American, 5 Egyptian, 16 French and 9 British directors.

## SUEZ CANAL STATISTICS

Year	Ships	Net Tonnage	Receipts
1949	10,420	68,861,548	£E22,869,700
1950	11,751	81,795,523	£E26,700,500
1951	11,694	80,356,338	£E26,160,000
1952	12,168	86,137,037	£E26,729,900

In 1952, 33.4% of the tonnage was British, 15.8% Norwegian, 8.9% French, 7.8% Panamanian and 7.3% U. S.

ANGLO-EGYPTIAN SUDAN — Status:  
Anglo-Egyptian condominium.

Area: 967,500 square miles.

Population (est. 1951): 8,740,000.

Capital: Khartoum (pop. 1948: 71,400).

Governor General: Sir Robert Howe.

Foreign trade (1952): exports, £E42,697,000; imports, £E61,023,000. Chief exports: cotton (68%), cottonseed.

Agricultural products: cotton (ginned) (1951-52: 54,374 metric tons), cottonseed, millet, sesame, wheat, peanuts.

Minerals: gold, salt.

Forest product: gum arabic (exports 1951: 41,087 metric tons).

About one-fourth the size of Europe, Anglo-Egyptian Sudan extends from north to south about 1,200 miles and west to east about 1,000 miles. Before the revolt against Egyptian rule by the Arabized tribes under Mohammed Ahmed (the Mahdi) in 1882-84, the region was known as Egyptian Sudan. Since its reconquest by the Anglo-Egyptian expeditions of 1896-98, it has been known by its present name.

Under the self-government statute promulgated March 31, 1953, executive power is exercised by the governor general, nominated by the British government and confirmed by Egypt. He is advised by the prime minister and a cabinet of from 10 to 15 Sudanese members. Legislative power is exercised by a bicameral parliament composed of a senate of 50 members, partly elected and partly appointed, and a chamber of deputies of 78 elected members. Certain defense and external relations matters are reserved to the governor general. The promulgation of the statute was preceded by an Anglo-Egyptian agreement on Feb. 12, 1953, which recognized the right of the Sudanese people freely to determine their political status at the end of a 3-year transitional period following election of the new parliament, scheduled to take place in Oct. 1953.

The northern region is a continuation of the Libyan Desert. The southern region is fertile, abundantly watered and, in places, heavily forested. It is traversed from north to south by the Nile, all of whose great tributaries are partly or entirely within its borders. The highest elevation is a mountain range parallel to the Red Sea, with heights of 4,000 to over 7,000 feet. Sudan is the chief source of gum arabic; the southern forests also are rich in fibers and tannins.

There are two trunk railways, one connecting Sudan with Egypt and the other affording access to the chief port, Port Sudan, on the Red Sea.

The whole country lies within the tropics and has an exceedingly hot climate—greatest in the central area and least in the desert zone, where the temperature range is large. At Khartoum the mean annual temperature is 80°.

## Estonia

Area: 18,357 square miles.

Population (est. 1940): 1,126,415 (Estonians, 88%; Russians, 9%; Germans [Balts], 1%; others, 2%).

Density per square mile: 61.4.

Principal cities (est. 1938): Tallinn, 146,400 (capital); Tartu, 60,100 (university town); Narva, 24,200 (seaport).

Language: Estonian (Finno-Ugrian).

Religions: Lutheran, 78%; Greek Orthodox, 19%; others, 3%.

Born out of World War I, this small Baltic state enjoyed two short decades of independence before it was absorbed again by its powerful neighbor, Russia. In the thirteenth century, the Estonians had been conquered by the Teutonic Knights of Germany, who reduced them to serfdom. In 1521, the Swedes took over, and the power of the German (Balt) landowning class was curbed somewhat. But after 1721, when Russia succeeded Sweden as the ruling power, the Estonians were subjected to a double bondage—the Balts and the tsarist officials. The oppression lasted until the closing months of World War I, when Estonia finally achieved independence.

Shortly after the start of World War II, the nation was occupied by Russian troops and was incorporated as the 16th republic of the U.S.S.R. In 1940, Germany occupied the nation from 1941 to 1944, when it was retaken by the Russians. Most of the nations of the world, including the U. S. and Great Britain, have not recognized the Soviet incorporation of Estonia.

## Ethiopia (Kingdom)

(Abyssinia)

Area: 350,000 square miles.\*

Population (est. 1950): 10,000,000\* (Abyssinian [Amharas], 20%; Galla, 50%; others, 30%).

Density per square mile: 28.6.\*

Ruler: Emperor Haile Selassie I.

Prime Minister: Bitwoded Makonnen Endalkatchau.

Principal cities (est. 1948): Addis Ababa, 250,000 (capital); Harar, 45,000 (coffee); Dessie, 35,000 (grain center); Dire Dawa, 30,000 (railway workshops).

Monetary unit: Ethiopian paper dollar.

Languages: Amharic, Arabic.

Religions: Copt (Christian), Mohammedan.

\* Excluding Eritrea.

**HISTORY.** Ethiopia, a land-locked African kingdom more than twice the size of California, was one of the first victims of the Axis aggression that culminated in World War II. Italy, after creating fake border incidents, invaded the country on Oct. 3, 1935, and Addis Ababa fell on May 5, 1936. Haile Selassie, the emperor, fled the country, and the Italians welded Ethiopia, Italian Somaliland and Eritrea into the colony of Italian East Africa.

World War II brought early liberation; Ethiopia, in fact, was the first of the Axis-occupied nations to be retaken by the Allies. British and Ethiopian troops reconquered the country in 1941, with the final Italian surrender occurring on Nov. 27. During a transition period thereafter, the nation was under dual Anglo-Ethiopian control. Under an agreement signed on Jan. 31, 1942, British troops quit the country except for stipulated border areas. The latter were evacuated in Aug., 1948.

After the war, the country launched a modernization program in agriculture, industry and education. Irredentist claims to the ex-Italian colonies and former Ethiopian provinces, Eritrea and Somaliland, began to be voiced in 1946. In December, 1950, the U. N. General Assembly voted to federate Eritrea with Ethiopia under the sovereignty of the Ethiopian crown.

The Ethiopian royal family claims descent from the Queen of Sheba and from Menelek, a son of King Solomon. Christianity was introduced about A.D. 330, and after the Arab conquest of northern Africa in the 7th century, Ethiopia was more or less cut off from the outside world for a thousand years. When Theodore III proclaimed himself emperor in 1853, the country was a conglomeration of autonomous provinces under hereditary chiefs who were usually at war with one another. Menelek II, who ascended the throne in 1889, brought Ethiopia under single rule, and his forces finished off a five-year Italian attempt at invasion with a great massacre at Aduwa on March 1, 1896. Revenge for this massacre was one of Mussolini's great war cries in his 1935-36 invasion of Ethiopia.

**GOVERNMENT.** Ethiopia's ruler, Haile Selassie I, was born on July 17, 1891, crowned king on Oct. 7, 1928, and emperor on Nov. 2, 1930. His eldest son, the crown prince and heir apparent, is Asfa Wassan, born on July 27, 1916. The emperor directly controls the government, though there now is a Council of Ministers, a Senate and a Chamber of Deputies. All members are appointed by the monarch, however.

In wartime, military service is compulsory. The small Ethiopian standing army is equipped and trained by a British military mission. A small Ethiopian force was dispatched to Korea in 1951.

**SOCIAL AND ECONOMIC CONDITIONS.** The education system is extremely backward. Foreign missions or the government maintain schools in the principal towns, and several secondary schools have been set up. There were 540 primary schools with 60,000 pupils (1950) and 15 secondary schools with 1,079 (1949). The Coptic Church (Christian), with its numerous priests, exercises powerful influence and owns much Ethiopian land. It became independent of the Coptic Archbishop of Alexandria in 1946. Moslems, numerous in frontier regions, have their religious center at Harar. The towns of Ethiopia are scattered and crudely built.

Ethiopia is generally fertile, predominantly agricultural and pastoral, with many regions yielding two crops a year. The chief crops are maize, wheat, barley, rye, cotton, sugar cane, millet, hemp, vegetables, coffee and teff (the common bread grain). The country's inadequate transport system, however, makes crop growing largely a local industry.

The country grazes several million cattle, and many goats and sheep. Horses and mules are bred extensively as pack animals and mounts. There is little manufacturing except for small native industry, although the Italians built some industrial plants during their five-year occupation.

Recent trade data (for years beginning Dec. 11, in millions of Ethiopian dollars):

	1949-50	1950-51	1951-52
Exports*	70.9	116.8	116.8
Imports	73.4	104.6	104.6

\* Excluding specie.

Chief exports in 1950-51 were coffee (54%), hides and skins (26%) and cereals (7%). Major imports were cotton piece goods, machinery, sugar and salt.

The 486-mile track from Addis Ababa to Djibouti in French Somaliland is Ethiopia's only rail outlet and its principal trade route. Motorable roads, non-existent until about 1925, now total 11,000 miles. The long rainy season makes road maintenance difficult, and air traffic has become increasingly important, especially as a means of communication with foreign commercial centers. The National Ethiopian Line serves internal and neighboring areas.

Ethiopia has sought the help of foreign architects in the modernization of Addis Ababa, which, since the days of Menelek, has been a sprawling town of mud huts and tin roofs.

The 1949-50 budget estimated revenue at Eth.\$63,300,000 and expenditure at Eth.\$63,200,000.

Gold, produced from placer mines worked by natives in the south and west, is Ethiopia's main mineral. Platinum also is mined in fair commercial quantities. Other

minerals are rock salt, cinnabar, copper, iron, mercury, mica, potash and sulfur. Oil deposits are believed to exist, and all drilling rights have been sold to the Sinclair Refining Company of the U. S.

Vegetation is dense in the valleys and lowlands, but the plateau is comparatively bare, especially in the north. The forests contain many valuable trees, including the Natal yellow pine.

**TOPOGRAPHY AND CLIMATE.** Over its main plateau-land, Ethiopia has several high mountains; Dashan, the tallest peak, towers to 15,158 feet northeast of Lake Tana. Most of the many rivers are rapid, not navigable, and flow into the Nile. The Blue Nile, or Abbai, rises in the northwest and flows in a great semicircle east, south and northwest before entering Sudan. Its chief reservoir, Lake Tana, lies in the northwestern part of the plateau.

Ethiopia, lying wholly within the tropics, escapes a torrid climate because of its elevation, although the lowlands are hot. The mean annual range of temperature is between 60° and 80°, although Alpine conditions prevail in the higher mountains. The dry season lasts generally from October to June, the wet season from June to September.

**ERITREA—Status:** Federated with Ethiopia.

Area: 47,875 sq. mi.

Population (est. 1950): 1,100,300.

Capital: Asmara (population: 117,000).

Sovereign: Haile Selassie I.

Chief Executive: Ato Tedla Bairu.

Agricultural products: coffee, barley, tobacco, sesame, hides, skins.

Minerals: gold, salt, potassium salts.

Sea product: pearls.

The first Italian inroad into Eritrea came in 1870 when the port of Assab and adjacent territory were bought from a native sultan; with British approval, Italian troops occupied Massaua in 1885. By a decree of Jan. 1, 1890, Italian possessions along the Red Sea were united into the colony of Eritrea. In 1936 Eritrea became a part of Italian East Africa. British and Indian troops captured Asmara on Apr. 1, 1941, and Massaua a week later; the area, reduced to its pre-1936 borders, then came under British military administration. The U. N. General Assembly on Dec. 2, 1950, adopted a plan for federation of an autonomous Eritrea with Ethiopia under the sovereignty of the Ethiopian crown, federation becoming effective Sept. 15, 1952.

As an autonomous, self-governing area, Eritrea has its own elected assembly which selects the chief executive. It is also represented in the Ethiopian parliament. Matters reserved to the Ethiopian government include defense, foreign affairs, foreign trade, finance and communications.

The principal native elements are the

Ethiopians and Tigrés, who have close ethnic, linguistic and religious ties with peoples in neighboring Ethiopia. Italians in 1950 numbered 18,000. Irrigation is essential in the low-lying coastal plains, and agriculture is practiced largely on the interior plateau (average elevation: 6,500 ft.) where the climate is suitable for European settlement. The pastoral industry engages most of the natives.

Along the coast, the climate is excessively hot and humid, especially in June, September and October; mean annual temperature at Massaua is 86°; the thermometer often rises to 120° in summer.

## Finland (Republic) (Suomen Tasavalta)

Area: 130,160 square miles.

Population (est. Dec. 31, 1952): 4,116,000. (Finnish, 91%; Swedish, 9%).

Density per square mile: 31.6.

President: Juho K. Paasikivi.

Premier: Urho K. Kekkonen.

Principal cities (census 1951): Helsinki, 375,981 (capital); Turku (Åbo), 103,899 (seaport, shipbuilding); Tampere, 102,910 (textiles, paper); Lahti, 44,759\* (glass, lumber); Pori, 43,137\* (timber).

Monetary unit: Markka (FM).

Languages: Finnish, Swedish.

Religions (1937): Evangelical Lutheran, 97%; Greek Orthodox, 1.7%; Roman Catholic, .02%; others, 1.23%.

\* Preliminary figures.

**HISTORY.** The Finns, a people of possibly Mongolian origin, first settled their Montana-sized area about A.D. 100. King Eric IX of Sweden conquered them about 1155 and introduced Christianity. Under Swedish rule, which lasted for 650 years, the Finns retained considerable autonomy and were given their own parliament in the 17th century.

Political pressure growing out of the Napoleonic Wars forced Sweden in 1809 to cede Finland to Russia, which gave the Finns a constitution and set them up as a grand duchy. Out of the chaos and complexities of World War I, the Russian revolution of 1917 and a Finnish civil war in 1918 between "Reds" and "Whites" led by Baron Carl G. von Mannerheim, Finland emerged as a republic in 1919. A year later Russia ceded to Finland the Petsamo area with its ice-free Arctic port.

For the next twenty years Finland was generally orderly and prosperous except for vigorous suppression of Communists and a bloodless rightist uprising in 1932. The national presidents during this period were K. J. Ståhlberg, 1919-25; Lauri Relander, 1925-31; P. E. Svinhufvud, 1931-37; and K. Kallio, 1937-40.

In Nov., 1939, the Russians attacked Finland to enforce territorial demands.

The sturdy Finns stood off large-scale Red Army assaults for 105 days, but finally lost and ceded to Russia 10 per cent of the nation's area, including the Karelian isthmus. Under German pressure and somewhat in a spirit of revenge, the Finns joined the Nazis against Russia in 1941—and lost again.

Risto Ryti, a pro-German who succeeded Kailla as president in 1940, was forced to resign on Aug. 1, 1944, and was replaced by Baron Carl G. von Mannerheim (who had led Finnish forces in both wars with the U.S.S.R.) Finland severed relations with Germany on Sept. 2, signed an armistice and concluded a provisional peace treaty with Britain and Russia, Sept. 19. The U. S. had not declared war on Finland.

Pro-Russian Juho K. Paasikivi became premier on Nov. 11, 1944, and when Mannerheim resigned because of illness on March 4, 1946, Paasikivi was elected by the Diet to fill the unexpired presidential term. The premiership went to Mauno Pekkala, leader of the new Socialist Unity Party, advocating cooperation with Communists.

Since then the Finns, burdened by the heavy reparations load, have made good progress in rehabilitating their war-torn areas and industrial plants. Politically they have steered a cautious but realistic course acceptable to the Soviet Union, in whose orbit the country now must turn. Political liberty has been preserved to a surprising extent despite widely differing factions ranging from extreme left to far right.

The Communists and their allies lost ground in the July, 1948, parliamentary election and on July 29, Karl August Fagerholm formed a Social Democrat government in which the leftist bloc was not represented. Paasikivi was re-elected for a full 6-year term in Feb., 1950, and on Mar. 17, Fagerholm was succeeded as premier by Urho Kekkonen at the head of a centrist minority cabinet. The Communists retrieved part of their losses in the July, 1951, parliamentary elections.

**GOVERNMENT.** Under the 1919 constitution, the 200 Diet members are popularly elected by a proportional representation system for three-year terms. The president, normally chosen for six years by an electoral college of 300 members nominated by the people, acts through his Cabinet headed by the prime minister. Suffrage is universal. Because of the many political parties, government usually is carried on by a coalition, with frequent cabinet changes.

Party standing in the Diet after the July, 1951, elections was as follows (1948 standing in parentheses): Social Democrats, 83 (54); Agrarian, 52 (56); Communists, 45 (38); Conservatives, 26 (28); others, 24 (19).

The Swedish-populated Åland islands

have an autonomous status under a statute passed in Oct. 1951.

**PEACE TREATY OF 1947.** The final peace treaty became effective Sept. 15, 1947; it confirmed the de facto cession to the U.S.S.R. of the Petsamo area, Viipuri and the Karelian region and also of the Porkkala-Udd area west of Helsinki for use as a Soviet naval base. Finland was to pay reparations of \$300,000,000 in kind (reduced to \$225,000,000 by the U.S.S.R. in 1948) over a period of eight years from Sept. 19, 1944, and was to make two-thirds compensation to United Nations nationals for wartime property losses. Reparations payments were completed in Sept. 1952.

The treaty limited Finnish defense forces to the following strengths: army, 34,400 personnel; navy, 4,500 personnel and a tonnage of 10,000; and air force, 3,000 personnel and 60 aircraft. The possession of bombers, submarines, atomic weapons and motor torpedo boats is prohibited.

**SOCIAL AND ECONOMIC CONDITIONS.** Illiteracy is very low (.9% beyond the age of 15). Education is compulsory from 7 to 15. In 1951 there were 6,185 elementary schools with 488,327 students and 338 secondary schools with 94,971 pupils. There are three regular universities, of which Helsinki has the largest enrollment (8,294 in 1951).

About 60 per cent of the total population is engaged in agriculture, 17 per cent in mining and industry, 3.8 per cent in transport, 4.3 per cent in commerce, 2 per cent in professions and 11 per cent in miscellaneous occupations. Considerable progress has been made in social legislation, including workmen's compensation. The cooperative movement is extensive. By a 1927 law, expropriation of large estates was carried out, with compensation to their owners.

Only about 3 per cent of the land is under cultivation, and about 5 per cent in grassland. The chief crops (with estimates, 1952 production in metric tons) are oats, 726,000; barley, 206,000; rye, 191,000; potatoes, 1,615,000. Grazing lands are extensive. In 1951 there were 1,756,470 cattle, 1,207,000 sheep, 486,000 hogs and 110,080 reindeer.

The leading Finnish manufactures are wood and paper (about one-third the total value), food, luxury items, machinery and textiles. Following the cession of the Karelian isthmus and the city of Viipuri to the U.S.S.R., Finland lost valuable manufacturing areas. Helsinki is the principal industrial center.

Trade statistics, in billions of markkas:

	1950	1951	1952
Exports	90.08	199.19	164.96
Reparations*	7.85	12.40	8.22
Imports	89.15	155.44	182.03

\* Included in export totals.

Leading exports in 1952 were wood and wood products (43%), wood pulp (22%) and paper and products (18%). Leading suppliers were Britain (15%), Germany (12%), U.S.S.R. (10%) and France (9%). Chief customers were Britain (22%), U.S.S.R. (22%), Germany (9%) and France (7%).

According to *Lloyd's Register*, the merchant marine, on June 30, 1952, had 342 ships (100 tons and over) aggregating 583,191 gross tons. The numerous lakes, many fed by canals, are busy transport routes. About 40,000 vessels and 18,000 timber rafts use the canals annually. There were approximately 36,500 miles of roads in 1950. Railway mileage in that year totaled 3,533, almost entirely nationalized.

Recent public finance data are as follows (in billions of markkas):

	1951	1952	1953*
Revenue	204.6	205.0	180.0
Expenditure	207.0	204.2	180.0

\* Budget estimate.

The total public debt was estimated at 129,113,000,000 FM on Dec. 31, 1952.

Finland has no coal or oil, and many of its ore deposits are remote from transportation. Finland's sulfide ore (production in 1952: about 954,000 metric tons) is 4 per cent copper, 26 per cent sulfur and 27 per cent iron, with some zinc, cobalt, gold and silver. Limestone, soapstone and red granite deposits are extensive, and uranium deposits are believed to exist. Wood and peat are the only natural fuels.

More than a third of Finland is covered with high quality timber, the nation's richest natural resource. Timber production in 1952 totaled about 750,000 metric tons; cellulose, 1,156,000 tons; mechanical pulp, 145,000 tons; paper, 685,000 tons; and cardboard, 147,000 tons.

Finns have fished for centuries, not commercially, but for domestic consumption. The 1951 catch was about 40,000 metric tons.

**TOPOGRAPHY AND CLIMATE.** Finland stretches 700 miles from the Gulf of Finland on the south to Soviet Petsamo, north of the Arctic Circle. Off the southwest coast are the Åland Islands (approximately 300), controlling the entrance to the Gulf of Bothnia. Finland has more than 60,000 lakes. Of the 1939 area, 11 per cent was lake and 48 per cent swampland. Of the few rivers, only the Oulu (Uleå) is navigable to any important extent. Most of the country is tableland 400 to 600 feet above sea level, with a rise to 4,115 feet in the Halditjokko region of the northwest.

Finland's long severe winters are moderated somewhat along the coast by prevailing southwest winds, but the summer lasts only about two and a half months.

Southerly Finnish ports are icebound part of the year. Rainfall is light, with the driest months from May to September.

## France (Republic) (République Française)

Area: 212,741 square miles.

Population (est. Dec. 31, 1951): 42,400,000. (1946: French, 94.2%; others, 5.8%).

Density per square mile: 199.3.

President: Vincent Auriol.

Premier: Joseph Laniel.

Principal cities (est. 1948): Paris, 2,800,000 (capital); Marseille, 700,000 (chief port); Lyon, 470,000 (silk, metal manufacture); Toulouse, 285,000 (tobacco; commercial center); Bordeaux, 250,000 (wine; seaport); Nice, 235,000 (resort center); Nantes, 210,000 (manufacturing).

Monetary unit: Franc.

Religion (est.): Roman Catholic, 97.5%; Protestant and others, 2.5%.

**HISTORY.** France was ancient Gaul when Caesar conquered a part of it in 57-52 B.C.; for several centuries thereafter it was bound to the Roman Empire. In the 5th century A.D., it was overrun by the Franks and other barbarian tribes. Between 768 and 814, Charlemagne created a Frankish empire covering most of Western Europe, but by the time Hugh Capet came to the throne in 987, his kingdom comprised only the region around Paris. For more than 300 years the Capets struggled to unify the many feudal fiefs.

Philip VI, cousin of the last Capet and first of the House of Valois, took the throne in 1328. Soon thereafter began the Hundred Years' War (1338-1453), the struggle over England's bid to seize the French crown. The English won at Crécy in 1346 and at Agincourt in 1415, but were defeated at Orléans in 1429 by the French forces led by Joan of Arc. Cruel persecution of French Protestants, the Huguenots, was followed by civil war and then the Edict of Nantes in 1598, by which the Huguenots received complete religious freedom from Henry IV, first of the Bourbons.

Glendor, wealth and the establishment of a colonial empire marked the long reign of Louis XIV from 1643 to 1715. Extravagance, however, forced Louis XVI to struggle with the problem of taxation at a time when the forces of revolution were coming to a head among France's lower and intellectual classes. The French Revolution, of world significance for its impact on absolute rule, broke out in 1789. Louis XVI was deposed in 1792 and executed the next year. Then came the Reign of Terror as the revolution swung to excess, the Directory from 1795 to 1799, and the Consulate from 1799 to 1804, after which Napoleon was proclaimed emperor. Meanwhile, French armies were engaged on all

## FRANCE AND THE FRENCH UNION

Country	Area, sq. mi.	Population, estimated
France	212,741	42,400,000 (1951)
<b>Africa</b>

New Hebrides	4,633	49,000 (1949)

sides, spreading French hegemony over most of western and central Europe. The final downfall came at Waterloo on June 18, 1815.

The restored Bourbon, Louis XVIII, reigned until 1824 and was succeeded by his reactionary brother, Charles X, who was overthrown in the revolution of 1830. His successor, Louis Philippe, was unseated in 1848, and succeeded by Napoleon's nephew, Louis. Inaugurated president of the Second Republic in 1848, Louis Napoleon became emperor as Napoleon III in 1852 but abdicated after France's defeat in the Franco-Prussian War of 1870-71. The resultant conflict between republicans and monarchists was resolved by the adoption of a republican constitution in 1875, which established the Third Republic to replace the provisional Republic set up in 1871.

Victorious with the Allies in World War I under Premier Georges Clemenceau, France emerged as the dominant power on the continent. From 1919 on, its aim was to keep Germany weak through a system of military alliances and by maintaining a strong French army.

The effort was a dismal failure. At home France was weakened by economic and political instability, with many short-lived cabinets. Germany became a dictatorship, with the full national energy bent toward war. The Third French Republic, permitting political freedom, bickered and argued away its years. The leftist "Popular Front" coalition cabinets of Léon Blum (1936-37) and Camille Chautemps (1937-38) were succeeded by the Radical and Radical-Socialist cabinet under Edouard Daladier one of the men of Munich.

Paul Reynaud took Daladier's place on

March 21, 1940, less than seven months after the start of World War II. In May, 1940, Hitler's armies finally poured into France and on June 16, the reins of government fell to Marshal Henri Philippe Pétain, who opposed continuation of the war. An armistice with Germany was signed June 22, dividing France into occupied and unoccupied zones. The Third Republic was voted out of existence on July 10 by the National Assembly at Vichy, and Unoccupied France became totalitarian, with Pétain as chief of state.

Meanwhile, in London, General Charles de Gaulle had formed on June 18, 1940, a provisional French National Committee which received British recognition and represented the interests of free Frenchmen. De Gaulle's government-in-exile was moved to Algiers in June, 1943, as the French Committee for National Liberation.

After the liberation of Paris, De Gaulle formed a provisional government in the capital on Sept. 10, 1944. It remained in power as a theoretically non-political régime until the elections of Oct. 21, 1945, when a National Assembly was selected to draw up a new constitution and serve as an interim legislative body. De Gaulle was named provisional President on Nov. 13 but resigned soon after and was succeeded by Félix Gouin, a Socialist, on Jan. 23, 1946.

A proposed constitution providing for a strong legislature and weak executive was rejected by the electorate on May 5, 1946. The new National Assembly, elected June 2, named Popular Republican Georges Bidault as Interim President. France's new constitution was approved by a narrow margin on Oct. 13, and the Fourth Republic formally took shape early in 1947 with the election of Socialist Vincent Auriol as President, Jan. 16, and the confirmation of Socialist Paul Ramadier as Premier, Jan. 22.

In the ensuing 4½-year period a series of short-lived cabinets held office, of which three were headed by Henri Queuille, a Radical Socialist, two by Robert Schumann, a Popular Republican, and one each by André Marie, a Radical Socialist, Georges Bidault, a Popular Republican, and René Pleven, a Democratic Unionist.

In indecisive elections held on June 17, 1951, Gen. de Gaulle's followers won the largest single block of assembly seats. Pleven's next cabinet, formed on Aug. 11, gave way on Jan. 18, 1952, to Edgar Faure. Independent Antoine Pinay was named Premier March 6. Radical Socialist René Mayer, who took over Jan. 8, 1953, resigned on May 21, and after the longest cabinet crisis in French history, Independent Joseph Laniel was confirmed as Premier on June 26.

**GOVERNMENT.** Under the constitution

approved Oct. 13, 1946, France is a secular, democratic and social republic. The dominant power in the new Republic is the National Assembly, whose members (627 in 1952) are elected by universal direct suffrage. There is also a Council of the Republic of 320 members elected by a complicated indirect procedure requiring 8 different elections. This house has only advisory and delaying powers and is definitely subordinate to the Assembly. The two Houses together elect the President of the Republic for a 7-year term, but his choice of a Premier and the latter's choice of cabinet ministers require Assembly ratification. All ministers are collectively responsible to the Assembly for the general policy of the Cabinet and are individually responsible for their personal actions.

The National Assembly elections of June 17, 1951, divided the 627 seats as follows: De Gaullists 118, Socialists 104, Communists 103, moderate right-wing parties 98, Radical Socialists and affiliates 94, Popular Republicans 85, overseas deputies 23 (2 vacancies). The Communists polled 26.5% of the popular vote, De Gaullists 21.7% and Socialists 14.5%.

France's 22nd postwar cabinet, approved June 30, 1953, had 6 Independents, 5 Popular Republicans, 4 former Gaullists, 3 Radicals, 2 Democratic Unionists and 1 Peasant. Communists have been excluded from the government since April 30, 1947.

**GOVERNMENT OF OVERSEAS TERRITORIES.** The French constitution of 1946 provided for establishment of the French Union, consisting of the French Republic (metropolitan France and the overseas departments, territories and trustships) and the associated territories and states. The overseas departments are Algeria (three departments), Martinique, Guadeloupe, French Guiana and Réunion.

The overseas departments and territories are represented in the National Assembly by 75 deputies and in the Council of the Republic by 65. In addition the constitution provided for creation of a high council, consisting of nominees of the French government and of the associated states, and an Assembly of the French Union, with power that is mainly advisory. The Assembly, which met for the first time on Dec. 10, 1947, consists of 240 delegates, 120 of whom are elected by the French parliament, 75 by territorial assemblies overseas, and 45 by the associated states.

Article 61 of the constitution provides that the position within the Union of the associated states—tentatively described as French Morocco, Tunisia and the Federation of Indo-China—is "settled for each of them by the act which defines their relations with France." Thus far, both Morocco and Tunisia have declined to modify their

protected status in favor of a closer bond with France. Viêt-Nam, Laos, and Cambodia, in Indo-China, have become associated states.

**DEFENSE.** French armed forces in Jan. 1953 (including the gendarmerie) totaled about 836,000 men, largely recruited under a conscription system providing for 18 months of service. An increase of about 42,000 was scheduled for 1953. Forces in Indo-China totaled 213,000, of whom 188,000 were army personnel and 82,000 French nationals. About 100,000 men were stationed in North Africa and 67,000 in other overseas territories. A small unit was serving in Korea. The army had 12 divisions totaling about 608,000 men, and the air force 28 squadrons with 103,000 men. The navy had 66,000 men and 2 light aircraft carriers, 1 escort carrier, 2 battleships, 5 cruisers, 9 destroyers, 28 frigates, 12 submarines and several hundred smaller craft.

**EDUCATION.** State elementary schools in 1951 numbered 69,970, with 3,831,938 students. There were also 10,982 private schools with 894,474 students. Secondary education for boys is provided in *lycées*, classical and modern schools maintained by the state (588 in 1949 with 225,000 students), communal colleges and free schools. Girl students enrolled in *lycées* and classical and modern schools numbered 187,000 in 395 institutions in 1949.

Higher education is provided chiefly in the universities, of which there are 17, with total enrollment of 139,533 in 1951. The University of Paris is largest, with an enrollment of more than 50,000.

**RELIGION.** The predominant faith is Roman Catholicism, but Church and State were separated in 1905. Diplomatic relations with the Vatican were resumed in 1921, and lesser church property was returned to diocesan associations in 1924.

**POPULATION.** The people are not homogeneous, varying from section to section. During the inter-bellum period, the population remained almost static, with an increase of only 72,133 from 1931 to 1936 and a decrease of 3.3 per cent from 1936 to 1946. The birth rate also fell sharply (1925: 19.6; 1936-38 annual average: 14.8), but the end of World War II saw an uptrend, and there was an estimated rate of 19.2 in 1952.

**AGRICULTURE.** The national economy of France is predominantly agricultural. Of the total area, approximately 40 per cent is ordinarily devoted to crops, 20 per cent to forests, 3 per cent to vines and two per cent to market and other gardening. The vast majority of holdings are small farms worked by the owners. France normally is almost self-sufficient in basic foodstuffs and leads the world in wine production.

Production of major crops, in metric tons, was estimated as follows in 1952: wheat, 8,398,000; rye, 465,000; barley, 1,725,000; oats, 3,303,000; maize, 452,000; sugar beets, 8,100,000.

Other important crops are potatoes, berries, fodder beets, fruits, hay, nuts and turnips. Silk culture once thrived in the lower Rhône valley, but production fell sharply between wars. Milk, butter and cheese are important as exports. Livestock in Oct. 1951 included 16,240,000 cattle, 7,585,000 sheep, 7,222,000 hogs and (1950) 1,288,000 goats. Wine production in 1952 was about 1,300,000,000 U. S. gallons.

**INDUSTRY.** Principal industrial areas are Paris, Artois, Lower Seine and Lyon; the textile industry is concentrated in the north. Leading manufactures are iron, steel, chemicals, textiles, automobiles, machinery and beet sugar. Industrial production in 1952 was estimated at 131 per cent of the 1948 level.

#### FRENCH INDUSTRIAL PRODUCTION

Monthly averages, 1951 and 1952,  
in metric tons

Product	1951	1952
Pig iron and ferroalloys	729,000	814,000
Crude steel	819,000	906,000
Cement	696,000	736,000
Cotton yarn	22,600	21,400
Wool yarn	10,000	9,200
Rayon yarn	4,760	3,440
Electricity	3,004*	3,205*
Manufactured gas	203†	207†
Automobiles	26,160‡	30,830‡

\* Millions of kwh. † Millions of cu. m. ‡ Units.

**TRADE.** Foreign trade statistics, in billions of francs, including the Saar:

	1950	1951	1952
Exports	1,078.2	1,462.4	1,363.6
Imports	1,073.8	1,563.9	1,551.1

Principal suppliers in 1952 were the French Union (42%), Switzerland (7%) and Belgium, Germany and the U. S. (each 6%). Leading customers were the French Union (23%), the U. S. (10%), Germany (7%) and Britain and Belgium (each 4%). Leading exports were machinery and vehicles (18%), steel mill products (11%) and chemicals (7%).

**COMMUNICATIONS.** The French merchant marine had 1,251 ships (100 tons and over) aggregating 3,637,853 gross tons on June 30, 1952, according to *Lloyd's Register*—fifth largest in the world on that date. Losses during World War II were heavy.

There are about 5,500 miles of navigable waterways, including canals, with a traffic of 40,300,000 metric tons in 1951. There are approximately 550 inland navigation ports, of which Paris, Rouen and Strasbourg each normally handle more than one million

tons annually (Paris, more than ten million tons). Railway mileage in 1950 totaled 25,645. Railroads were merged in 1938 into the *Société Nationale des Chemins de Fer Français*, of which the government acquired controlling interest. Highway mileage in 1950 was 445,000, including 50,000 miles of national highways. Telephones totaled 2,520,762 on Jan. 1, 1952. Air France, nationalized on Jan. 1, 1946, operates on a world-wide basis.

**FINANCE.** France's postwar financial position has been extremely unstable. Recent data are as follows (in billions of francs):

	1951	1952*	1953*
Revenue	2,346	2,773	3,009
Expenditure	2,849	3,498	3,751

\* Budget estimate.

On Dec. 31, 1951, the internal debt was 3,104,000,000,000 fr.; the external debt, 1,256,000,000,000 fr.

On Dec. 2, 1945, the Bank of France and four large private banks were nationalized, and commercial credit came under government supervision.

**TOPOGRAPHY.** With a maximum length of about 600 miles and a width of 550 miles, France is second in size to Russia among Europe's nations. Its coastline is about 1,950 miles. In the Alps near the Italian and Swiss borders is France's highest point—Mont Blanc, 15,781 feet. The forest-covered Vosges Mountains are in the northeast and the Pyrenees are along the Spanish border. Except for extreme northern France, which is part of the Flanders plain, the country may be described as four river basins and a plateau. Three of the streams flow west—the Seine into the English Channel, the Loire into the Atlantic, and the Garonne into the Bay of Biscay. The Rhône flows south into the Mediterranean. For about a hundred miles, the Rhine is France's eastern border. West of the Rhône and northeast of the Garonne lies the Central Plateau, covering about 15 per cent of France's area, and rising to a maximum elevation of 6,188 feet. In the Mediterranean, 115 miles east-southeast of Nice, is Corsica, the island of Napoleon's birth, with an area of 3,367 square miles.

**MINERALS.** French coalfields, most extensive in the northeast, ordinarily supply about 70 per cent of domestic needs. Lorraine, Anjou and Normandy have valuable iron ore deposits. Provence has bauxite. Alsace has potash and oil. Limousin has kaolin, zinc, lead and tar.

Production in 1952 included coal, 55,368,000 metric tons (excluding the Saar); iron ore, 40,704,000 tons; lead (smelter), 51,600 tons; petroleum, 2,490,000 barrels; (1951) potash, 987,600 tons.

**FORESTS AND FISHERIES.** France, with over 26,000,000 wooded acres, produces well

over \$100,000,000 worth of forest products in a normal year, including resin, turpentine, timber and nuts. The annual fish catch (463,600 metric tons in 1951) is among the largest in Europe. Cod and sardines are usually the biggest items; others are coalfish, herring, whiting, mackerel, tunny, lobster, oysters, rays, flounder and sole.

**CLIMATE.** France's climate is temperate but varies from long cold winters and hot summers in the northeast, to the subtropical temperature of the Mediterranean coast with very mild winters. With no high western elevations to block moisture-laden winds from the Atlantic, all France has adequate rainfall of 20 to 30 inches a year. The mean annual temperature at Paris is 50.5° (36.5° in January and 65.5° in July). The rainiest months are June and October, with February usually the driest.

## Andorra

This 191-square mile autonomous and semi-independent state on the Franco-Spanish border has been under the joint suzerainty of the French State and the Spanish bishops of Urgel since 1278. It is a cluster of mountain valleys inhabited by about 5,200 hardy and traditionally independent people whose principal pursuit is the tending of flocks. Catalán is the language spoken, and both French and Spanish currency are in use. Andorra is governed by a Council General of 24 members, elected for four years by the heads of families. A First Syndic, chosen by the Council, constitutes the supreme executive authority.

## French Union

### AFRICA

## Algeria (Part of Metropolitan France)

### (L'Algérie)

Governor General: Roger Léonard.

Principal cities (census 1948): Algiers, 315,210 (capital); Oran, 256,661 (seaport); Constantine, 118,774 (trading center); Bône, 102,823 (seaport; phosphates).

Monetary unit: French franc.

Languages: Arabic, French.

Religions: Mohammedan (natives), Roman Catholic, Jewish.

**HISTORY.** Algeria, more than three times the size of Texas and situated on the northern bulge of Africa, was of great strategic importance during World War II. After U. S. and British troops occupied it following the landings of Nov. 8, 1942, it became the headquarters of the provi-

sional French government of General Charles de Gaulle until the summer of 1944. For many months during that period it was the headquarters of the Allied Expeditionary Force.

Algeria became a Roman colony after the fall of Carthage in 146 B.C. and was overrun by the Arabs in the 7th, 11th and 12th centuries. In the 13th century it became one of the three kingdoms founded on the ruins of the old Almohade Empire. Following a brief Spanish occupation, it went under Turkish suzerainty in 1518. For 300 years thereafter Algiers was the headquarters of the notorious Barbary pirates who preyed on Mediterranean shipping. The French ended Turkish rule by taking Algiers in 1830, but it was not until 1847 that they were able to suppress a holy war instigated in 1839 by Abd-el-Kader.

French policy for a time vacillated between complete assimilation of Algeria as part of France, and a decentralized administration under a governor general. In 1896 the idea of assimilation was abandoned for a number of years. After France fell in 1940, Algerian government officials were loyal to Vichy, but their control was ended by the Allied invasion of the African coast in 1942.

**GOVERNMENT.** In effect, Algeria is part of France. Its three departments are represented in the National Assembly by 15 deputies, and it is one of the ten military districts of France, with both French and natives subject to military service. The governor general is responsible to the Interior, rather than Colonial, Ministry in the French Cabinet. A statute enacted in Aug., 1947, gave Algeria an elected legislative assembly, but leadership of the government still remains with the governor general.

**SOCIAL AND ECONOMIC CONDITIONS.** Primary and secondary schools for Europeans are on French lines. Most natives do not go beyond the primary grades. The knowledge and use of French has spread widely among the natives, but the teaching of Arabic in all schools was made compulsory in 1946. There is a university at Algiers, with faculties of science, arts, law, medicine and pharmacy.

Approximately 86 per cent of the population is native, 12 per cent French and 2 per cent other European. The native population is Berber, with Arab admixture physically assimilated.

The area under cultivation is about 15,000,000 acres, more than 30 per cent of which is owned by European farmers, chiefly in the fertile coastlands. The principal crops are wheat, barley and oats. Algeria is a leading wine producer, with almost 7 per cent of the cultivated area devoted to vines. Production in 1952 was 303,800,000 U.S. gallons, about two-thirds

of normal. Olive trees are widespread; the average annual yield of oil is about 2,500,000 gallons. Tobacco, corn, vegetables, flax, silk, figs and dates are also produced. Much of the area is more adapted to grazing than to agriculture. In 1951 there were 5,321,000 sheep, 810,000 cattle, and in 1950, 2,900,000 goats and 120,000 camels.

European industries include those dependent on crops, such as distilling and oil and flour milling, as well as the making of leather, tobacco and matches. There are also small native industries, particularly the traditional carpet weaving.

Exports in 1952 were valued at 143,574,000,000 fr.; imports, at 223,438,000,000 fr. Chief exports were wine (37%), iron ore (8%) and flour (5%). Chief imports were petroleum and products (7%), machinery and apparatus (6%) and automobiles and trucks (6%). France took 70% of the exports and supplied 79% of the imports.

Algeria has 3,393 miles of railway. A central line runs from the Moroccan to the Tunisian frontier with branches north to all the ports and south into the Southern Territories. There is an excellent network of roads of more than 30,000 miles, and motor transport is well developed, including regular passenger and freight lines across the Sahara. Only French ships may normally trade between France and Algeria.

Revenue (ordinary and extraordinary) was estimated at 83,439,893,000 fr. in 1951-52; expenditure was estimated at 83,414,461,000 fr.

Algeria is a leading producer of phosphates (1952: 692,600 metric tons). Iron ore of good quality is found near the Tunisian frontier and on the Oran coast (1952: 3,085,700 tons). Zinc, lead and salt are also important minerals; and small amounts of oil and coal are produced.

Forests, mostly scrub, cover about 7,500,000 acres; cork is the leading product. Fish products include anchovies, sardines, shellfish, spray and tuna.

**TOPOGRAPHY AND CLIMATE.** Algeria fronts on the Mediterranean for more than 700 miles. Northern Algeria extends inland for 185 to more than 200 miles. South of it are the big, economically unimportant Southern Territories. Low plains cover small areas near the coast, but 68 per cent of Algeria is a plateau between 2,625 and 5,250 feet above sea level. The region between the Sahara and the Mediterranean reaches a high point of 7,641 feet.

Most of the streams are periodic with the rains. The Chélif is the principal river, over 435 miles long. On the Saharan slopes, the oases or the hot sands absorb the streams as soon as they leave the mountain ridges.

Rainfall averages 20 to 40 inches on the coast, and decreases to virtually none in

the Sahara. On the coast, temperatures average about 52° in winter, 77° in summer. Inland, the winter average is about 40° and summer about 81°, although the Sahara summer average is 95° to 105°.

**CAMEROUN (FRENCH CAMEROONS)**—Status: U. N. trust territory.

Capital: Yaoundé (population 50,000). High Commissioner: André Soucadaux. Foreign trade (1952): exports, 11,042,000,-000 fr. C.F.A.\*; imports, 18,648,000,000 fr. C.F.A.\* Chief exports: cacao (54%), fresh bananas, coffee, palm kernels and oil.

Agricultural products: cacao (exports 1952: 51,089 metric tons), palm kernels and oil, bananas, millet, sweet potatoes.

Minerals: diamonds, gold, tin.

Forest product: timber.

\* Colonies Françaises d'Afrique, equal to 2 metropolitan francs.

Cameroun is bounded principally by French Equatorial Africa, except for the Atlantic Ocean on the west, the British Cameroons on the northwest, and Río Muni on part of its southern boundary.

In 1884 the Cameroons became a German colony (Kamerun), and after the conclusion of World War I the region was divided as a League mandate between Britain and France, four-fifths of the area going to France. The new U. N. trusteeship area has political and financial autonomy under a French High Commissioner, responsible to the French government. Cameroun joined the Free French movement in 1940. The chief port is Douala; the administrative center, Yaoundé, is located on the central plateau.

The climate is tropical and unhealthy for Europeans; not even in the cool months does the temperature generally fall below 70°. Rainfall is heavy on the coast and is fairly evenly distributed through the year.

**FRENCH EQUATORIAL AFRICA**—Status: Group of overseas territories.

Governor General: Paul Chauvet.

Capital: Brazzaville (population 83,579). Foreign trade (1952): exports, 10,092,-000,000 fr. C.F.A.; imports, 20,130,000,000 fr. C.F.A. Chief exports: cotton (47%), timber, gold, diamonds, coffee, palm kernels.

Agricultural products: cotton (1952 exports: 29,335 metric tons), wool, palm kernels and oil, coffee.

Minerals: gold, diamonds, and lead.

Forest products: timber, rubber, copal gum, wax.

This group lies in west central Africa, bordered on the west by the Atlantic, Cameroun, Nigeria and French West Africa; on the north by Libya; on the east by Anglo-Egyptian Sudan; and on the southeast and south by Belgian Congo. The coast, an early slaving center, was first settled by the French in 1839; French hegemony was subsequently extended by exploration and conquest of the native tribes. The territories declared for Free

France following the armistice of June, 1940, and Brazzaville became capital of De Gaulle's Free French movement.

The governor general, responsible to the Minister for France Overseas in the French Cabinet, administers the area as an administrative unit with the aid of an administrative council; each of the four territorial regions (Gabon [Gabun], Middle Congo, Ubangi-Shari, Chad) has a governor responsible to him. There were, in 1950, 17,440 Europeans; most of the Africans are Negroes. There are Arab and Fulani settlements in the Chad region, and several Moslem sultanates. Natural resources, both forest and mineral, are vast but relatively unexploited. The country's economic life depends primarily on the forest products. The colony is capable of exporting large quantities of hard okoumé wood, either in logs or in veneer form.

The climate is tropical—hot and humid—and the average temperature is about 80° (78° at Brazzaville), varying only slightly throughout the year. Rainfall averages about 60 inches annually, with no marked wet or dry seasons.

**FRENCH MOROCCO**: see MOROCCO

**FRENCH SOMALILAND**—Status: Overseas territory.

Capital: Jibuti (population 22,000).

Governor: Numa Sadoul.

Foreign trade (1952, including ship stores): exports, 2,082,000,000 Jibuti fr.\*; imports, 6,120,000,000 Jibuti fr. Chief exports: hides, salt.

Mineral: salt.

\* 1 Jibuti franc = 1.64 metropolitan francs.

French Somaliland, at the southern entrance to the Red Sea, was acquired by France between 1883 and 1887 by treaties with the Somali sultans, although posts on the coast had been acquired in 1856. This small, largely arid and sparsely populated region is important chiefly because of the port of Jibuti, the main artery of Ethiopia's trade via the Jibuti-Addis Ababa railway. The area is administered by a governor, responsible to the French government and assisted by an administrative council. It adhered to the Free French movement in December, 1942. In 1951 there were 2,439 Europeans.

## French West Africa

### (Group of Overseas Territories)

(L'Afrique Occidentale Française)

Governor General: Bernard Cornut-Gentille.

Principal cities (est. 1951): Dakar, 330,-000 (capital, chief port); (est. 1948): St. Louis, 62,900.

Monetary unit: Franc C.F.A. (Colonies Françaises d'Afrique, equal to 2 metropolitan francs).

Languages: French, native tongues.

Religions: Mohammedan, Pagan.

**HISTORY AND GOVERNMENT.** The St. Louis Colony, founded in 1626 at the mouth of the Sénégal River, was probably the first permanent white settlement in French West Africa in which the French established themselves, largely for the purpose of pursuing the slave trade. Little progress inland was made until after 1854, when a scheme was conceived to link the upper Sénégal with the upper Niger. After 1876 the coast settlements were extended steadily into the interior through a series of missionary and economic campaigns. In 1895 the colony of French West Africa was formed under one governor general by the unification of its various components.

The governor general of the area is appointed by the French government and is assisted by a legislative council and an elected assembly. Governors responsible to him administer the eight constituent territories—Sénégal, French Guinea, Ivory Coast, Dahomey, Haute Volta (re-established in 1947), French Sudan, Mauritania and Niger. Each of these has considerable autonomy, with the central government supervising services common to all.

The area is represented in the French National Assembly, the Council of the Republic, and the Assembly of the French Union.

**SOCIAL AND ECONOMIC CONDITIONS.** Attendance at elementary schools in 1952 was approximately 170,000. There were also 6,435 secondary school students and 2,250 technical school students.

No racial unity exists in French West Africa, and there is great variation of physique, manner, custom and language. The population is native except for approximately 63,000 Europeans (1951). Non-Negro tribes include the Saharans, Moors, Tuaregs and Fulbé. About half the population normally is Mohammedan, but a number of tribes have remained spirit worshippers.

Agriculture has expanded rapidly in recent years. Millet, rice and maize are the principal food crops, and vegetable oils are a leading commercial product. Peanuts, the chief export crop (1951: 779,000 metric tons) are cultivated in Sénégal, and palm kernels and oil are produced in Dahomey and the Ivory Coast. Other products are coffee, cotton, cacao and bananas. Stock raising is important in French Sudan and Mauritania, relatively dry districts in the northern part of the area. Manufacturing is undeveloped except for small native industries. Expansion is hindered by limited power facilities.

Imports in 1952 totaled 61,163,000,000 fr. C.F.A., including cotton textiles, machinery, vehicles and metal products. Sénégal and the Ivory Coast account for over half the exports, which totaled 40,195,000,000

fr. C.F.A. in 1952 and included coffee (29%), peanuts, peanut oil and cacao. France took 70% of the exports and supplied 68% of the imports.

The middle Niger and lower Sénégal Rivers are navigable, but French West Africa's railways (1950: 2,350 mi.) are more important as interior communications. Dakar, with the best harbor on the west African coast, is the principal port and also an important stop on international air routes between South America and Europe. There are several other good ports.

The estimated budget for 1951 balanced at 27,884,000,000 fr., over a third of which was the total local budget of the eight component territories.

Gold, found in alluvial deposits in Sénégal and in veins in the Ivory Coast, and diamonds are the only important minerals. (Production of gold, however, has dropped sharply in recent years). Timber and precious woods are important, especially in the Ivory Coast. Forest products include timber, mahogany logs, gum arabic, shea butter (a solid, white fat obtained from the seeds of the shea tree) and nuts, kapok and beeswax.

**TOPOGRAPHY AND CLIMATE.** The area, comprising a sixth of Africa, is half as big as Europe; it is generally a plateau broken by two mountain ranges. The Futa Jallon, from 2,300 to 4,900 feet in elevation, parallels the coast for about 430 miles, and Mount Nimba, on the Liberian border, rises 5,250 feet. There are also mountainous regions in the Sahara districts to the north. The Niger, 2,600 miles long, is the principal river.

The central and northern parts of the colony have two seasons, rainy and dry. In the southernmost regions there are two rainy seasons, separated by a short dry season. Average annual rainfall at St. Louis is 16.7 inches; at Dakar, 20.2 inches. Temperatures on the west coast average about 70° in winter and 82° in summer, with daily variation of about 20°.

**MADAGASCAR AND DEPENDENCIES—**Status: Overseas territory.

Capital: Tananarive (Antananarivo) (est. pop. 1950: 174,153).

Governor General: Robert Barges.

Foreign trade (1952): exports, 16,378,000,000 fr. C.F.A. (69% to France); imports, 23,379,000,000 fr. C.F.A. (71% from France). Chief exports: coffee (44%), cloves (8%), meat (5%).

Agricultural products (1952): rice, 900,000 metric tons; raw sugar, 18,000 tons; coffee (exports), 41,811 tons; vanilla, manioc, bananas, maize, coconuts.

Minerals: graphite (1952 exports: 17,479 metric tons), mica, phosphates, gold.

Forest products: gum, medicinal plants, rubber, tannins, dyewoods.

Madagascar, lying off the southeast coast of Africa, is the fourth largest island in the world, with a length of 995 miles and

an average width of 250 miles. It remained independent under native rulers until 1885, when it came under French protection. French troops conquered the island in 1895 and it became a French colony the following year. The last native ruler, Queen Rānavàlona III, was exiled.

British troops landed on the island May 5, 1942, during World War II, and an armistice with Vichy French forces was signed November 5, 1942. The island is administered by a governor general responsible to the Minister for France Overseas in Paris, assisted by a General Assembly. Native nationalist outbreaks occurred in 1947, and French troops maintained order with difficulty.

The chief occupations are cattle raising (1951: 5,892,000 cattle) and agriculture; there are several food-processing and textile plants. The chief port is Tamatave on the east coast; the capital, Tananarive, is located on the central plateau. In 1950 there were 44,500 French and 19,900 other European residents. The natives, collectively known as Malagasy, are divided into several tribes. Outlying dependencies include the islands of Europa, Juan da Nova, Bassas da India and Glorieuses.

The Comoro Islands (800 sq. mi.), formerly a dependency, became an autonomous territory in 1946.

The climate of Madagascar is generally tropical, with a warm and wet season from November to April and a cool, dry season the rest of the year. Temperatures vary between 55.5° and 95° (at Tamatave, 80° in February, 68° in July).

**RÉUNION (Bourbon)**—Status: Département of Metropolitan France.

Capital: St. Denis (population 39,057).  
Prefect: Pierre Philippe.

Foreign trade (1952): exports, 5,304,800,-000 fr. C.F.A.; imports, 6,895,000,000 fr. C.F.A. Chief exports: sugar, essential oils (geranium oil, oil of vetiver, oil of ilang-ilang), rum.

Agricultural products: sugar, vanilla, coffee, maize.

Discovered by Portuguese navigators in the 16th century, the island, then uninhabited, was taken as a French possession in 1638. It is located about 450 miles east of Madagascar, in the Indian Ocean.

There is no indigenous population. About three-quarters of the inhabitants are of European origin; the remainder are Creoles, mulattoes, Negroes, Indians and other Asiatics. Tropical cyclones of hurricane variety are frequent during the change of seasons. Occasionally a *raz de marée* (tidal wave) does great damage. Sugar-cane cultivation and the production of rum are the principal occupations.

**TOGO**—Status: U. N. trust territory.  
Capital: Lomé (population 30,063).  
Commissioner: Laurent Péchoux.

Foreign trade (1952): exports, 2,031,000,-000 fr. C.F.A.; imports, 2,331,000,000 fr. C.F.A. Chief exports: cacao, palm kernels, coffee, copra.

Agricultural products: cacao, palm kernels and oil, cotton, copra, coffee.

Mineral: iron ore.

Forest products: dyewoods, oil palms.

Togo, a part of the former Slave Coast, lies between the British Gold Coast colony and French West Africa. Established as a German colony in 1884, the area was divided as a League mandate by France and Britain at the end of World War I, with France obtaining two-thirds of the total area. It was placed under U. N. trusteeship in Dec. 1946. Agriculture and grazing are the chief industries. In 1951, there were 1,500 Europeans. The coastline, only 32 miles long, is low, sandy and without harbors.

The coastland climate is hot, humid and unhealthful, with wet seasons lasting from March to June and from September to November.

## Tunisia (Protectorate)

Ruler (Bey): Sidi Mohammed al-Amin.  
Resident General: Pierre Voizard.

Prime Minister: Salaheddin Baccouche.

Principal cities (census 1946): Tunis, 364,593 (capital); Sfax, 54,637 (phosphate port); Bizerte, 39,327 (seaport and naval base); Sousse, 36,566 (seaport).

Monetary unit: French franc.

Languages: Arabic, French, Italian.

Religion: Predominantly Mohammedan.

**HISTORY.** Tunisia was settled by the Phoenicians and Carthaginians in ancient times. Except for an interval of Vandal conquest in A.D. 439-533, it was part of the Roman Empire until the Arab conquest of 648-69. Then it was ruled by various Arab and Berber dynasties until the Turks took it in 1570-74. The founder of the present dynasty, Hussein ben 'Ali, was proclaimed sovereign by the occupation troops in 1705 and later succeeded in making the office hereditary, although subject to nominal Turkish sovereignty.

Throughout much of its history, Tunisia was essentially a pirate state, preying on Mediterranean shipping. In modern times, Italy became predominant economically in the area, but after French troops occupied the area in 1881, the Bey signed a treaty acknowledging a French protectorate.

Following the Allied landings in North Africa in 1942, Tunisia became a battleground with the Axis forces pinched between the British 8th Army advancing from Libya and the U. S., British and French forces from Algeria. The Axis units surrendered in May, 1943, and Tunisia was turned over to the De Gaulle government. On May 15, 1943, the reigning Bey, Sidi Mohammed al-Mounsaf, was removed and replaced by his cousin, the present ruler.

Fanned by Arab nationalist agitation elsewhere, the Tunisian nationalist party, *Destour*, although banned by the French, has intensified its activity in recent years. Its aim is the complete independence of Tunisia and its adherence to the Arab League.

**GOVERNMENT.** Although the Bey is theoretically sovereign, a French resident general directs the government, assisted by a cabinet with some Tunisian members. An agreement looking toward wider self-rule was signed in Feb., 1951.

The Southern Territory is subject to military administration.

**SOCIAL AND ECONOMIC CONDITIONS.** In 1950, Tunisia's 633 public and 153 private schools had 175,262 pupils, about a third of them French and Italian. The Great Mosque at Tunis is a Moslem University.

Tunisia's population (by the 1946 census, 87.4 per cent Arab) is concentrated in the cities and on the coast. There are about 100,000 nomads.

Agriculture is the chief industry. Over a quarter of the arable land is in wheat (1952: 600,000 metric tons). Other important crops are barley, oats, corn, sorghum, beans and peas. Wine production in 1952 was 17,200,000 gallons. Average annual olive oil production is about 45,000 metric tons (1950: 46,000 tons). The Cape Bon region is largely devoted to citrus fruits, the southern oases to dates. In 1951 there were 3,060,000 sheep, 76,000 horses, 44,000 mules, 162,000 asses, 476,000 cattle and (1949) 150,000 camels. More than 50,000 sheep and 4,000 tons of wool a year are usually exported.

Leading industries include flour milling, oil refining, lead smelting and distilling. Native industries include the spinning and weaving of wool, and the making of pottery and leather goods.

Tunisia, Algeria and France are under a single customs union for a number of products. Exports in 1952 were valued at 38,255,000,000 fr., of which 45% went to France. They included phosphates (16%), wheat (9%), iron ore (9%) and alfa (esparto grass) (9%). Imports were valued at 61,352,000,000 fr., of which 73% came from France. The leading items were petroleum and products (9%), machinery and apparatus (8%), cotton textiles (7%) and iron and steel products (6%).

There were 8,700 miles of roads and 1,351 miles of railway in 1950. Tunis, Bizerte, Sousse and Sfax are the principal ports.

The 1951-52 budget balanced at 43,155,000,000 fr. State monopolies, including tobacco, provide about 25 per cent of the revenue and indirect taxes about half.

Tunisia's extremely rich deposits of

phosphates are mined principally in the Gafsa and Keif regions. Production in 1952 was 2,254,700 metric tons. The iron ore is of good quality (1952: 976,800 tons). Other minerals are lead (1952: 36,600 tons), zinc, mercury, manganese, copper, salt and poor-grade lignite.

Products derived from Tunisia's 2,500,000 acres of forests include lumber, mine props and cork. Alfa is exported, mainly to England, for making of paper pulp. About 20,000 Tunisians work at fishing; the catch averages 8,000 tons of fish and 95 tons of sponges annually.

**TOPOGRAPHY AND CLIMATE.** Tunisia, at the northernmost bulge of Africa, thrusts out toward Sicily to mark the division between the eastern and western Mediterranean. It is mountainous in the north, covered by plains in the east, and projects southward to the Sahara area. Its principal river, the Medjerda, in the north, is 228 miles long. The climate is Mediterranean with mean temperature extremes at Tunis of 52.7° and 79.2°. Annual rainfall ranges from 24 inches in the north to less than five inches in the south.

## WESTERN HEMISPHERE

**FRENCH GUIANA (including ININI)—**Status: Département of Metropolitan France.

Capital: Cayenne (population 10,961).

Prefect: Robert Vignon.

Foreign trade (1951): exports, 203,700,000 fr.; imports, 2,085,300,000 fr. Chief export: gold (61%).

Agricultural products: bananas, cacao, corn, manioc, rice, sugar cane.

Mineral: gold (1950: 13,812 troy oz.).

French Guiana, lying north of Brazil and east of Surinam (Dutch Guiana) on the northeast coast of South America, was first settled in 1626. Penal settlements, embracing the area around the mouth of the Maroni River and the Iles du Salut (including Devil's Island), were founded in 1852; they have now been replaced by refugee camps.

During World War II French Guiana at first adhered to the Vichy government, but the Free French took over in March, 1943. The large and scantily populated territory of Inini in the hinterland is administered separately. Economic development is extremely backward; transportation is almost entirely by water, conditions are unsanitary and large quantities of foodstuffs must be imported. Gold is the chief export.

January temperatures average 79°, September and October temperatures 82°. Rainfall is heavy.

**GADELOUPE—**Status: Département of Metropolitan France.

Capital: Basse-Terre (population 13,638).

Prefect: Gaston Villegier.

Foreign trade (1952): exports 9,966,000,-

000 fr.; imports, 12,439,000,000 fr. Chief exports: sugar (57%), bananas.

Agricultural products (1952): sugar (85,000 metric tons), bananas (72,155 tons), coffee, cacao, manioc, vanilla.

Guadeloupe, lying in the West Indies about 300 miles southeast of Puerto Rico, was discovered by Columbus in 1493. French colonization began in 1635. It consists of two large islands, separated by a narrow arm of the sea, and several outlying smaller islands. Most of the population is Negro and mulatto. The largest city and chief port is Pointe-à-Pître (population 44,551). About half the cultivated area is devoted to sugar cane. The manufacturing of rum and spirits is the principal industry. Mean annual temperature is 78°.

**MARTINIQUE**—Status: Département of Metropolitan France.

Capital: Fort-de-France (population 64,525).

Prefect: Christian Lalget.

Foreign trade (1952): exports, 6,356,000,000 fr.; imports, 13,516,000,000 fr. Chief exports: sugar (31%), rum, bananas.

Agricultural products: sugar (1952: 43,000 metric tons), bananas, pineapples, cacao, coffee.

Manufactures: rum, sugar.

Martinique, lying in the Lesser Antilles about 300 miles northeast of Venezuela, was probably discovered by Columbus in 1502 and was taken for France in 1635. Following the Franco-German armistice of 1940 it had a semi-autonomous status under the High Commissioner, Admiral Georges Robert, until 1943, when he relinquished his authority to the Free French. The area, administered by a prefect assisted by an elected council, is represented in the French legislature. The population is mainly Negro and mulatto. Most of the arable land is devoted to sugar cultivation. Fort-de-France, the capital and chief commercial center, has an excellent harbor. Mean annual temperature of the coast region is 80° (77° in January, 83° in June).

**ST. PIERRE AND MIQUELON**—Status: Overseas territory.

Capital: St. Pierre (population 3,636). Administrator: Irénée Davier.

Foreign trade (1952): exports, 91,000,000 fr., imports, 487,000,000 fr. Chief export: cod and other fish products.

The sole remnant of the French colonial empire in North America, these islands were first occupied by the French in 1660. Their only importance arises from proximity to the Grand Banks (10 mi. south of Newfoundland) making them the center of the French Atlantic cod fisheries.

## ASIA

**FRENCH INDIA**—Status: Overseas territory.

Capital: Pondichéry (population 53,101). Commissioner: Audré Ménard.

Chief exports: peanuts, cotton textiles. Agricultural products: peanuts, manioc, rice, onions.

French India is a collective name for the scattered French possessions in India—on the Coromandel coast are Pondichéry, Karikal and Yanam; on the Malabar coast, Mahé. The chief possession is Pondichéry, founded by the French in 1674. The commissioner, responsible to the Minister for France Overseas in Paris, is assisted by a representative assembly. More than 90 per cent of the population of French India is Hindu.

Chandernagor, in Bengal, formerly part of French India, was transferred to India on May 2, 1950, in accordance with a popular referendum. The future status of the remainder of French India is also to be determined by referendum.

## Indo-China

High Commissioner: Maurice Dejean.

Ruler, Viêt-Nam: Bao Dai.

King, Cambodia: Norodom Sihanouk.

King, Laos: Sisavang Vong.

Principal cities (est. 1949): Saigon (including port of Cho Lon), 256,000 (capital, Viêt-Nam); Hanoi, 166,000 (commercial center, Viêt-Nam); Pnom-Penh, 128,950 (capital, Cambodia); Haiphong, 92,000 (seaport, Viêt-Nam).

Monetary unit: Piaster.

Languages: Annamese, Cambodian, French.

Religions: Buddhism, Christianity (4%).

**HISTORY, GOVERNMENT.** Indo-China, at the southeast corner of Asia, first met the West in the 16th century, when Portuguese traders and missionaries arrived. French influence dates from 1787, and in the 19th century France received preferential treatment for helping the emperor of Annam recover his throne. During the last half of the century, France gradually extended influence over the whole of Indo-China.

Until the beginning of World War II, Indo-China was an administrative federation of one colony—Cochin-China; four protectorates—Annam, Tongking, Cambodia and Laos; and a special territory—Kwangchowan (returned to China in 1945). These had various degrees of native rule, but the real administrator of each unit was the French chief resident.

After France fell in 1940, Vichy authorized the entry of Japanese troops, and the country became one of the springboards for the Japanese campaign against Singapore. When, in March, 1945, the Japanese seized control of the whole country, Annam and Cambodia declared their independence. After the Japanese surrender, British and Chinese troops occupied Indo-China in the face of a growing nationalist movement, and restored order for the

French authorities, who assumed control officially on March 4, 1946.

The Republic of *Viêt-Nam*—comprising Tongking and the northern part of Annam—was then recognized on March 6, 1946, as a free state within the Indo-Chinese Federation and the French Union. *Viêt-Nam* leaders, however, headed by Dr. Ho Chi Minh, a Communist, demanded a greater measure of autonomy and cession of the rich rice area of Cochín-China as well as southern Annam. The French steadfastly refused to accede to these demands, and fighting resumed on Dec. 19, 1946.

In the spring and summer of 1947, reinforced French troops won control over most major points in *Viêt-Nam*. On June 5, 1948, a new government uniting pro-French groups in Annam, Tongking and Cochín-China was set up, and a treaty signed that day recognized the unity of the new state within the French Union.

Meanwhile, guerrillas still held back areas. Communist forces attacked with renewed vigor in 1950, and French forces had to fall back in many places. The French later recovered, however, and fighting continued thereafter with indecisive results.

An agreement to fulfill the 1948 treaty, signed at Paris March 8, 1949, and effective June 14, gave *Viêt-Nam* full internal sovereignty and limited diplomatic representation abroad. In April, 1949, the newly elected assembly of Cochín-China voted to exercise its option of joining the new state. On June 14, Bao Dai, former emperor of Annam, proclaimed himself head of the new state with the approval of the French.

Similar agreements in respect to Laos and Cambodia were concluded on July 19 and Nov. 8, 1949, respectively.

Indo-China is thus made up of the states of *Viêt-Nam*, Laos, and Cambodia, each an independent and self-governing state within the French Union. The Union is represented in Indo-China by a high commissioner who coordinates services common to the three states, such as the fiscal, immigration and customs services. The high commissioner is represented in each state by a commissioner.

By late 1952, the French Expeditionary Corps in Indo-China had a strength of 213,000 men, of whom 82,000 were French nationals and the remainder Legionnaires, North Africans, Sénégalaise, and Indo-Chinese serving in French units. The *Viêt-Nam* army had 135,000 men and the Cambodian and Laotian armies had 13,800 and 13,600 men, respectively.

Regular Vietminh (Communist) forces numbered about 70,000 men, supported by numerous guerrilla and local militia units estimated at 250,000 men, actively engaged in fighting.

**SOCIAL AND ECONOMIC CONDITIONS.** *Viêt-Nam*, consisting primarily of the densely populated eastern and southeastern coastal areas, contains about 85 per cent of the population of Indo-China. The majority of its population is Annamese and speaks the Annamese language. The kingdom of Cambodia, in the southwest, contains part of the Mékong river delta and is populated largely by Cambodians who speak their own language. Laos, in the west and northwest, is sparsely populated by the Laotians and 3 ethnical minorities who belong to the Thai, Indonesian and Chinese races.

Rice, grown on five-sixths of the cultivated land, employs and feeds most of the population, and is normally the leading export and chief source of wealth. Production, centered in Cochín-China, ordinarily averages up to 4,500,000 metric tons annually (1951-52: 5,700,000 tons). Other crops include maize, sugar, cotton, tobacco, tea, coffee, peanuts, sweet potatoes and beans.

Indo-China is largely an exporter of raw materials. Its factories are small and process goods for local consumption or agricultural and forest products for export. Most important are the rice and saw mills. There are also cotton and silk textile factories, sugar refineries, match, cement and paper factories.

*Viêt-Nam*, Cambodia and Laos make up a single customs union. Exports in 1951 were 47,244,400,000 fr.; imports, 106,663,400,000 fr. The chief exports were rubber (44%), rice (31%) and maize (4%). Principal customers were France (38%), the French Union (11%) and the U. S. (11%). France (77%) and the U. S. (5%) were the leading suppliers.

Indo-China has several thousand miles of rivers and canals, including the Mékong River, which is navigable for two-thirds of its course. There are about 2,000 miles of railways. An excellent highway system includes 5,563 miles of improved road, and 11,477 miles of local road. Unreplaced bridges, wartime attrition and guerrilla activity still hamper traffic.

Mining is most developed in Tongking. Output of coal in 1952 was 834,700 metric tons. Iron ore, tin, zinc, tungsten, gold, phosphates, manganese, bauxite and lead are also mined.

Forests cover 76,570,000 acres of Indo-China. The high mountain ranges of the north supply valuable tropical hardwood, bamboo, lac and vegetable oil. Laos has rich teak forests. Rubber production in 1952 was about 61,420 metric tons, almost equal to pre-World War II output. The industry centers in Cochín-China. Fishing provides a major staple food to go with rice.

**TOPOGRAPHY AND CLIMATE.** Extending about a thousand miles from north to

south, Indo-China has two great delta regions—the Mékong in the south and the Song Koi in the north. These are separated by the Annam Mountains, and to the west of them are the mountainous continental regions of Laos. The climate is monsoonal, with nearly all of the very heavy rainfall between May and October; April and May are the hottest months (86° to 93.2°). Laos, in the interior, is cooler and drier than most of Indo-China.

## OCEANIA

**FRENCH PACIFIC SETTLEMENTS**—Status: Overseas territory.

Governor: René Petitbon.

Capital: Papeete, on Tahiti (population 1946: 12,428).

Foreign trade (1952): exports, 501,000,-000 fr. C.F.P.\*; imports, 813,000,000 fr. C.F.P. Chief exports: copra, phosphate, vanilla.

Agricultural products: coconuts, sugar, vanilla, tobacco.

Mineral: phosphate (exports 1952: 213,-555 metric tons).

\* Colonies Françaises du Pacifique, equal to 5½ metropolitan francs.

The term French Pacific Settlements is applied to the scattered French possessions in the eastern Pacific—Mangareva (Gambier), Makatea, Marquesas Islands, Rapa, Rurutu, Rimatara, Society Islands, Tuamotu Archipelago, Tubuai and Raivavae—which were organized into a single colony in 1903. The appointed governor is assisted by an administrative council. The principal and most populous island—Tahiti, in the Society group (pop. 1946: 24,820)—was claimed as French in 1768. Plebiscites conducted in September, 1940, gave support to the Free French movement of Gen. de Gaulle. The natives are mostly Polynesians. The climate of Tahiti is hot and humid, but not unhealthful.

## NEW CALEDONIA AND DEPENDENCIES

—Status: Overseas territory.

Capital: Nouméa (population 16,000).

Governor: Raoul Angammare (also French Commissioner General in the Pacific).

Foreign trade (1952): exports, 737,000,-000 fr. C.F.P.; imports, 1,101,000,000 fr. C.F.P. Chief exports: nickel, chrome ore, coffee, copra, shells.

Agricultural products: coffee, copra, corn, cotton, manioc, rice, tobacco.

Minerals (1952): nickel (4,100 metric tons, matte); chromite (106,700 tons).

Sea product: mother-of-pearl.

New Caledonia (6,533 sq. mi.), lying about 1,070 miles northeast of Sydney, Australia, was discovered by Captain James Cook in 1774 and annexed by France in 1853. The government, in the hands of an appointed governor and an elective council, also administers the Isle of Pines, the Wallis Archipelago, the Loyalty Islands, the Chesterfield Islands, Walpole, the Huon Islands, Futuna and Alofi, with a total area

of 1,121 square miles. The area—taken over in the summer of 1940 by the Free French after a bloodless revolution—is one of the richest of the Pacific islands in mineral resources, particularly nickel and chrome ore. The natives are Melanesians; about one-third of the population is white and one-fifth Indo-Chinese and Javanese. A French penal colony was established in the 19th century. Average temperature on New Caledonia varies between 65° and 72°.

**NEW HEBRIDES**—Status: Anglo-French condominium.

Capital: Vila (population 1,200).

Foreign trade (1952): exports, 237,787,-000 fr. C.F.P.; imports, 301,724,000 fr. C.F.P. Chief exports: copra, cacao.

Agricultural products: coconuts, cacao, coffee.

Sea products: trochus and burghaus shell.

The New Hebrides, under joint Anglo-French administration since 1914, lie northeast of New Caledonia. The islands, about 40 in number, joined the Free French movement after a plebiscite in July, 1940. Most of the natives are Melanesians of mixed blood; there were 340 British and 1,208 French in 1950. The largest island is Espiritu Santo (875 sq. mi.). The French and British high commissioners in the Pacific are represented by resident commissioners.

## Germany

**HISTORY.** In Caesar's time, the territory that is now Germany was inhabited by barbarous tribes that came originally perhaps from Central Asia. One of these Germanic tribes, the Franks, attained supremacy in western Europe under Charlemagne, who was crowned Holy Roman Emperor in A.D. 800. By the Treaty of Verdun (843), Charlemagne's lands east of the Rhine were ceded to the German prince Louis. Additional territory acquired by the Treaty of Mersen (870) gave Germany approximately the area she maintained throughout the Middle Ages. For several centuries after Otto the Great was crowned king in 936, the German rulers were also usually heads of the Holy Roman Empire.

Relations between State and Church were changed by the Reformation, which began with Martin Luther's 95 theses, and came to a head in 1547, when Charles V scattered the forces of the Protestant League at Mühlberg. Freedom of worship was obtained by the Peace of Augsburg (1555), but a Counter Reformation took place later, and a dispute over the succession to the Bohemian throne brought on the Thirty Years' War (1618-48) which devastated Germany and left the empire divided into hundreds of small principalities virtually independent of the em-

peror. Meanwhile, Prussia was developing into a province of considerable strength. Frederick the Great (1740-86) reorganized the Prussian army and defeated Maria Theresa of Austria in a struggle over Silesia. The conflict with revolutionary France hastened the disintegration of the empire, and in 1806 Francis II of Austria laid down the Imperial German crown. After the defeat of Napoleon at Waterloo (1815), the struggle between Austria and Prussia for supremacy in Germany continued, reaching its climax in the defeat of Austria in the Seven Weeks' War (1866) and the formation of the Prussian-dominated North German Confederation (1867).

At the close of the victorious war with France (1870-71), William I, King of Prussia, was crowned Emperor of Germany (Jan. 18, 1871). Under the guidance of the Imperial Chancellor, Prince Bismarck, Germany took a new place in world affairs, at the same time expanding her foreign trade and home industry rapidly. The Triple Alliance was formed with Austria and Italy in 1882. However, upon the accession of William II (1888-1918), Bismarck was dismissed and Russia was alienated. International rivalry was intensified in the early years of the 20th century, culminating in World War I, in which Germany, supporting Austria-Hungary's demands on Serbia, suffered final defeat. By the terms of the Treaty of Versailles (1919) Germany lost about 27,000 square miles of territory, including all her colonies, plus Alsace-Lorraine, northern Schleswig, Eupen-Malmédy, Upper Silesia, and considerable areas in the east. William II had abdicated (Nov. 9, 1918), and a federal republic was organized under the constitution adopted at Weimar in 1919. The constitution was attacked by both the Right and Left; several Communist uprisings took place in the early 1920's, and in 1923 Adolf Hitler's abortive putsch was defeated. Germany's inability to fulfill the heavy reparations demands stipulated by the Treaty of Versailles led to French occupation of the Ruhr (1923-25). National bankruptcy was avoided by adoption of the Dawes Plan (1924) and later, the Young Plan.

The chancellorship of Brüning, leader of the Catholic Center party (1930-32), saw increasing economic and financial distress and the practical cessation of reparations payments. Hitler's rising National Socialist party won a plurality in both the July and November Reichstag elections in 1932, but not until the failure of Franz von Papen and Kurt von Schleicher to form governments did President Hindenburg name Hitler chancellor (Jan. 30, 1933). With the death of Hindenburg in 1934, Hitler became complete master of Germany, which he rapidly converted into a totalitarian state under the aegis of the

Nazi party. All other political parties were banned, and the Jews were subjected to severe persecution. Through his foreign policy, Hitler repudiated the Treaty of Versailles and began full-scale rearmament. In 1935 he withdrew from the League of Nations and in 1936 he reoccupied the Rhineland and signed the anti-Comintern pact with Japan, at the same time strengthening relations with Italy. Austria was annexed in March, 1938. By the Munich agreement (Sept., 1938) he gained the Czech Sudetenland, and in violation of this agreement he completed the dismemberment of Czechoslovakia in March, 1939. But his invasion of Poland on Sept. 1, 1939, precipitated British and French declarations of war.

On May 8, 1945, Germany surrendered unconditionally to Allied and Soviet military commanders, and on June 5 the formation Allied Control Council became the *de facto* government of Germany.

At the Berlin (or Potsdam) Conference (July 17-Aug. 2, 1945) President Truman, Stalin and Prime Minister Attlee set forth the principles by which the Allied Control Council was to be guided. They were: Germany's complete disarmament and demilitarization; destruction of its war potential; rigid control of industry; decentralization of the political and economic structure. Pending final determination of territorial questions at a peace conference, the three victors agreed in principle to the ultimate transfer of the city of Königsberg (now Kaliningrad) and its adjacent area to the Soviet Union and to the administration by Poland of former German territories lying generally east of the Oder-Neisse line.

For purposes of control, Germany was divided in 1945 into four national occupation zones, each headed by a military governor, assisted by appropriate supervisory and operating staffs.

Efforts to unify Germany were totally unsuccessful, and the western powers were unable to agree with the U.S.S.R. on any fundamental issue. Work of the Allied Control Council was hamstrung by repeated Soviet vetoes; and finally, on March 20, 1948, the U.S.S.R. walked out of the Council. Meanwhile, the U. S. and Britain had taken steps to merge their zones economically (Bizone); and on May 31, 1948, the U. S., Britain, France and the Benelux countries agreed to set up a German state comprising the three western zones. At the same time the western powers introduced a new German currency.

The Soviet Union replied to these measures by clamping a blockade on all ground communications between the western zones and Berlin. The western Allies, refusing to be driven out of the capital, immediately organized a gigantic airlift to

fly supplies into the beleaguered city. Before the Russians were finally forced to lift the blockade on May 12, 1949, 60,000 men were engaged in the airlift.

In return for lifting the blockade, the U.S.S.R. asked only that the Big Four foreign ministers meet again to discuss German unification. The conference, meeting in Paris from May 23 to June 20, 1949, ended as usual in a deadlock.

## German Federal Republic

Area: 94,634 square miles.

Population (est. 1952): 48,478,000 (predominantly German).

Density per square mile: 512.3.

Allied High Commission: James B. Conant (U.S.A.); Sir Frederick H. Millar (United Kingdom); André François-Poncet (France).

President: Theodor Heuss.

Chancellor: Konrad Adenauer.

Principal cities (census 1950): Hamburg, 1,605,606 (chief port); Munich, 831,937 (Bavarian capital); Essen, 605,411 (steel works); Cologne, 594,941 (transportation center); Frankfurt am Main, 532,037 (manufacturing); Bonn, 115,394 (capital).

Monetary unit: Deutschemark (Dm.).

Language: German.

The German Federal Republic came into formal existence on Sept. 21, 1949, when the Allied High Commission turned over to it the administration of the U. S., British and French zones of occupation of Germany. Its creation marked the culmination of the Anglo-U. S.-French policy of progressively handing back to Germany its sovereignty and of modifying and reducing the restrictions and limitations on its industry. Preliminary steps reflecting this policy were: (1) the Anglo-U. S. agreement which took effect Jan. 1, 1947, providing that the U. S. and British zones should be treated as a single area for all economic purposes; and (2) the promulgation on Feb. 9, 1948, of a new bizonal charter providing for an economic council of 104 members to control all economic affairs in the U. S. and British zones.

On April 8, 1949, the Allied governments approved the terms of the Occupation Statute defining the basis for the merger of the U. S., British and French zones. On May 8, the German constituent assembly at Bonn approved a Basic Law or constitution for western Germany; it came into force on May 23, after approval by the *Landtage* of the 11 constituent *Länder*. Parliamentary elections were held on Aug. 14; and on Sept. 12, Free Democratic leader Theodor Heuss was elected president of western Germany. On Sept. 15, the *Bundestag* confirmed his appointment of Konrad Adenauer, leader of the Christian Democratic party, as chancellor. Bonn was selected as the federal capital on Nov. 3.

GOVERNMENT. Subject to the provisions

of the Occupation Statute, the republic and the participating *Länder* acquired full legislative, executive and judicial powers in accordance with the Basic Law and their respective constitutions. The principal powers reserved to the Allied High Commission were those of foreign policy, disarmament and demilitarization, Ruhr control, reparations, decartelization, and security of Allied occupation forces.

The Occupation Statute was amended on March 6, 1951, on the basis of an agreement between the U. S., Britain and France, to provide for creating a German foreign affairs ministry and further progressive relaxation of Allied controls.

Western Germany will have almost complete self-government subject to Allied defense rights under a peace contract signed May 26, 1952. The contract was subject to ratification by signatory countries, as was an agreement signed May 27 creating within NATO a European defense community with a joint European army to which western Germany would contribute.

The Basic Law or constitution of the republic provides for a federal form of government headed by a president elected every 5 years by a federal convention. The parliament consists of a *Bundestag* whose members are elected every 4 years by popular vote and a *Bundesrat* whose members are appointed by the *Länder* governments. Actual executive power is in the hands of the cabinet, answerable to the *Bundestag* and headed by a chancellor appointed by the president, subject to the right of the *Bundestag* to elect a chancellor of its own preference. Provision was made for the accession of *Länder* in the Soviet zone. Each of the 9 constituent *Länder* must have a republican form of government with an assembly elected by universal suffrage.

The party standing in the *Bundestag* was as follows in 1953: Christian Democrats 244, Socialists 150, Free Democrats 48, All-German 27, others 18.

On April 28, 1949, the international Ruhr authority was formally set up to allocate the production of the Ruhr industrial area. Upon the creation, effective July 25, 1952, of the European Coal and Steel Community the authority ceased to function and nearly all restrictions on Ruhr production were removed.

EDUCATION. Education is compulsory between the ages of 6 and 14. In May 1950, there were 28,400 elementary schools with 6,291,000 pupils, 579 higher elementary schools with 196,067 pupils, 1,488 secondary schools with 620,488 students, and 16 universities with 74,258 students.

AGRICULTURE. About 35 per cent (34,000 square miles) of western Germany's total area is arable. Agriculture is characterized by mixed farming, the climate and the soil permitting cultivation of a variety of

crops and most types of livestock. Rye and potatoes are staple crops in the north; grains and sugar beets in the central regions. The northwestern and southern areas are noted for dairying, while the west is the chief fruit- and wine-producing region. The soil is generally poor, and high crop yields are dependent upon large-scale use of fertilizers.

Production data for western Germany (excluding the Saar) are as follows (thousands of metric tons):

	1950	1951	1952*
Wheat	2,614	2,949	3,291
Rye	3,021	3,034	3,119
Barley	1,472	1,688	1,757
Oats	2,545	2,835	2,616
Potatoes	27,959	24,103	23,854
Sugar beets	7,016	7,177	6,805

\* Provisional.

In Dec. 1951, western Germany (excluding the Saar) had 11,375,000 cattle, 13,583,000 hogs, 1,455,000 horses and 1,666,000 sheep.

Western Germany is not self-sustaining in food. Difficulties stem to a considerable extent from the fact that Poland now controls the area east of the Oder-Neisse, which contained 28 per cent of prewar Germany's arable land and produced about 25 per cent of its food. Moreover, the population has grown rapidly.

**INDUSTRY.** Western Germany's industry is well-developed and highly diversified. It accounted for about two-thirds of Germany's prewar industrial production and for a large part of iron and steel production. In March 1953, employment in industry was 15,204,700; there were 1,392,900 unemployed.

Production data for western Germany (monthly averages, in thousands of metric tons) are as follows:

	1950	1951	1952
Pig iron and ferroalloys	789	891	1,073
Crude steel	1,010	1,125	1,317
Cement	906	1,017	1,074
Cotton yarn	23.54	26.98	24.37
Wool yarn	7.41	7.67	7.46
Rayon yarn	4.05	4.50	3.58
Automobiles	18.01*	22.28*	25.09*

\* Thousands of units.

Allied restrictions on steel production were lifted following the creation of the European Coal and Steel Community. Production of war material is still prohibited; the ban on production of certain light metals, synthetic rubber, gasoline and oil and machine tools was lifted in April, 1951, subject to capacity limitations in some cases. Industrial production was 144% of the 1936 level in 1952.

**TRADE.** Western Germany is dependent upon extraordinary foreign aid to pay for

a considerable portion of the food and industrial raw materials which it must import. Recent foreign trade data for the area which now comprises the republic are as follows (in millions of Deutschemarks, including west Berlin):

	1950	1951	1952
Exports	8,345	14,534	16,759
Imports	11,344	14,674	16,036

Leading exports in 1951 were machinery and vehicles (27%), coal and coke (11%), iron and steel (11%) and advanced steel manufactures (9%). Leading customers in 1952 were the Netherlands (8%), France (8%) and Belgium and Sweden (each 7%); leading suppliers, the U. S. (15%), the Netherlands (7%), France (6%), Sweden (6%) and Britain (3%).

**COMMUNICATIONS.** German railway trackage and rolling stock, as well as the canal system, were largely destroyed during World War II, and the lack of adequate transportation seriously hindered German economic recovery. In Dec. 1950, the western German rail network had a total length of about 19,100 miles, all publicly owned.

Civil air transport is handled by foreign air lines, Germany being prohibited from establishing its own lines. As of July, 1951, the west German merchant fleet had a total gross registered tonnage of 1,037,718. The principal seaports are Hamburg and Bremen.

Inland waterway transportation is of great importance. Over half the traffic is carried on the Rhine River, which links the Ruhr area with Belgian and Dutch ports. Shipping on the Rhine is controlled by the Central Commission of the Rhine—an international body composed provisionally of U. S., British, French, Swiss, Dutch and Belgian representatives—which was reconvened in October, 1945.

**FINANCE.** Recent data are as follows (in millions of Deutschemarks):

	1951-52	1952-53*	1953-54†
Revenue	16,370	20,727	24,480
Expenditure	16,770	19,687	24,480

\* Preliminary. † Preliminary budget estimate.

**NATURAL RESOURCES.** Aside from rich deposits of coal and potash, western Germany's mineral wealth is not considerable. The Ruhr, Krefeld and Aachen districts constitute one of the world's greatest coal mining regions, with total reserves estimated at 65,000,000,000 tons. Production in this area is handicapped by the prevalence of thin seams, but distribution is favored by easily accessible natural waterways and efficient canals. Known petroleum resources are meager, and supplies of iron ore, copper, lead and zinc are insufficient for domestic needs. Mineral production (excluding the Saar) was as fol-

lows in 1952: coal, 123,280,000 metric tons; lignite, 83,364,000 tons; iron ore, 15,408,000 tons.

About 23 per cent of the total area of western Germany is covered by commercial forests, which yield timber as well as material for paper, wood fiber, cellulose and other products.

**TOPOGRAPHY.** The northern plain, the central hill country and the southern mountain district constitute the main physical divisions of western Germany. The Bavarian plateau in the southwest averages 1,600 feet above sea level, but it reaches 9,721 feet in the Zugspitze, the highest point in Germany.

There are several important navigable rivers. In the south the Danube, rising in the Black Forest, flows east across Bavaria into Austria. The other important rivers flow north. The Rhine, which rises in Switzerland and flows across the Netherlands in two channels to the North Sea, is navigable by smaller ocean-going vessels as far as Cologne. The Rhine and the Elbe, which also empties into the North Sea, are navigable within Germany for ships of 400 tons. The Weser, flowing into the North Sea, and the Main and Mosel (Moselle), both tributaries of the Rhine, are also important.

**CLIMATE.** The climate of western Germany is intermediate between the oceanic climate of western Europe and the continental climate farther east. The average summer temperature is 60° to 62°. The sheltered mountain valleys of the south enjoy a more temperate climate, especially the valley of the Rhine above Mainz. Rainfall is heaviest in the south and west (over 30 inches).

## German Democratic Republic

Area: 41,700 square miles.

Population (census 1946): 17,313,700 (predominantly German).

Density per square mile: 415.3.

Soviet High Commissioner: Vladimir Semenov.

President: Wilhelm Pieck.

Premier: Otto Grotewohl.

Principal cities (census 1946): Leipzig, 607,655 (trading, publishing center); Dresden, 467,966 (railway center, Elbe port); Carl Marxstadt (Chemnitz), 250,188 (textiles); Magdeburg, 236,326 (iron and steel products); Halle am der Saale, 222,505 (railway center).

Monetary unit: Ostmark.

The so-called German Democratic Republic comprises the Soviet zone of occupation of Germany. It was proclaimed on Oct. 7, 1949, with its seat at Berlin, on the basis of a constitution adopted May 30, 1949, by a people's congress chosen under a plebiscite arrangement in elections held in the Soviet zone and eastern Berlin on May 15 and 16, 1949. The congress elected

a people's council (*Volksrat*) which was transformed on Oct. 7 into a provisional people's chamber (*Volkskammer*). A chamber of the states (*Länderkammer*) was nominated on Oct. 10, and on Oct. 11 both chambers elected Communist-leader Wilhelm Pieck as president of the republic and Otto Grotewohl as minister-president or premier. The constitution is soviet in nature and the government is under complete Communist domination. Soviet government supervision is exercised by the Soviet high commissioner.

The republic lies largely between the Elbe and Oder rivers, including most of Brandenburg, Mecklenburg and the industrial Saxon and Thuringian lands.

About 22 per cent of the population is engaged in agricultural pursuits and the area is almost self-sufficient in foodstuffs. Postwar yields have, however, suffered from droughts and shortages of fertilizer. Recent production data are as follows (in thousands of metric tons):

	1948	1949	1950
Wheat	999	926	815
Rye	1,941	2,025	2,130
Oats	809	1,087*	1,140*
Sugar beets	4,126	3,545	5,400
Potatoes	12,408	8,499	11,160†

\* Includes mixed grain. † 1951.

In Dec. 1950, there were an estimated 3,600,000 cattle, 5,700,000 hogs, 1,100,000 sheep and 775,000 horses in the area.

Most of the industrial establishments, particularly in heavy industry, have been nationalized. The area accounted for 26 per cent of prewar Germany's industrial production, ranking first in textiles, paper and pulp and ceramics and glass (especially optical glass produced by the famous Jena works). Total production in 1948 was estimated at 55 to 60 per cent of the 1936 level. A Two-Year Plan inaugurated in 1949 had the object of raising the volume of production to 81 per cent of the 1936 level by the end of 1950. Unofficial production data for 1948 are as follows: pig iron, 173,000 metric tons; raw steel, 191,700 tons; caustic soda, 80,000 tons; rayon and staple fiber, 61,700 tons; yarn and thread, 80,000 tons. Production of raw steel in 1952 was estimated at 2,000,000 metric tons.

Foreign trade is carried on through government-owned trading companies. Trade is confined largely to Europe. Important imports include coal, iron and steel and farm and forestry products; exports include lignite and crude potash.

Railways, highways and inland waterways were reported in 1953 still inadequate to meet the demands of the area's economy. The rehabilitation and expansion of transport facilities was emphasized in connection with the Two-Year Plan.

The area is not rich in minerals. It has only minor deposits of coal (1951 production: 2,500,000 metric tons) and deposits of iron ore are scanty and of low quality (1947: 280,000 tons). It does have important deposits of lignite (1951: 100,000,000 tons) and crude potash (1948: 823,000 tons).

The 1951 budget estimated revenue at 21,751,000,000 ostmarks and expenditure at 25,488,000,000 ostmarks.

Most of the area is part of a low plain. The climate is temperate for the most part.

## Berlin

Area: 344 square miles.

Population (census 1950): 3,336,475.

Berlin, the capital of prewar Germany, is surrounded by the German Democratic Republic. It is occupied by the forces of the U. S., the U. K., France and the U.S.S.R., each having its own sector of occupation. The three western sectors contain 55 per cent of the area and 63 per cent of the population.

The supreme authority in western Berlin is exercised by the Allied High Commission; its representatives constitute a tripartite Kommandatura which has responsibility for the exercise of the powers reserved to the occupation forces under the Berlin Charter, a document analogous to the west German Occupation Statute. Other powers of government are exercised by a city assembly elected by popular vote and a *magistrat* (city council) chosen by the assembly.

Supreme authority in the eastern sector of Berlin is exercised by the Soviet high commissioner. Powers not exercised by him or by the German Democratic Republic are vested in a "rump" city government, which proclaimed itself in power Nov. 30, 1948. Major anti-Communist riots broke out in east Berlin in June 1953.

## The Saar

Area: 898 square miles.

Population (est. 1951): 954,000.

Density per square mile: 1,062.4.

Premier: Johannes Hoffman.

Principal city: Saarbrücken (est. pop. 100,000).

Monetary unit: French franc.

The Saar is an industrial and mining region lying on Germany's western frontier north of Lorraine. Under the Treaty of Versailles it was detached from Germany and placed under the administration of the League of Nations, its coal mines being transferred to France. It voted in Jan., 1935, for reunion with Germany.

Part of the French zone of occupation after World War II, it now has, under agreements with France, legislative, execu-

tive and judicial autonomy, subject to the reserved powers of France in foreign relations, defense, and the maintenance of the economic, monetary and customs union between it and France. Under its constitution it has a popularly elected diet of 50 members, to which the cabinet headed by the premier is responsible. There is no head of state as such.

Coal reserves are conservatively estimated at 9,000,000,000 metric tons. Under an agreement concluded with France on Mar. 3, 1950, the mines are under French management with some Saar participation, an annual royalty being paid to the Saar by France. Production in 1952 included 16,236,000 metric tons of coal, 2,820,000 tons of raw steel and 2,544,000 tons of pig iron and ferroalloys.

## Greece (Kingdom) (Hellas)

Area: 51,182 square miles.\*

Population (census 1951)\*: 7,603,599 (1940, excluding the Dodecanese: Greek, 92.8%; Turkish, 3.8%; Macedonian, 1.3%; Spanish, 1%; others, 1.1%).

Density per square mile: 148.6.\*

Sovereign: King Paul I.

Premier: Alexander Papagos.

Principal cities (census 1951, municipal areas only): Athens (Athenai) 559,250 (capital); Piraeus (Peiralevs) 184,980 (port of Athens); (1940): Salonika (Thessalonika) 226,147 (seaport); Patras (Patral) 79,570 (seaport); Volos 54,919 (seaport).

Monetary unit: Drachma.

Languages: Greek, Turkish.

Religions: Greek Orthodox, 96%; Mohammedan, 2%; Jewish, 1.1%; others, .9%.

\* Including the Dodecanese.

**HISTORY.** Rugged, mountainous Greece—ancient cradle of one of the world's great civilizations—suffered cruelly in World War II and emerged as a land torn by civil war between its right and left political elements, while complete economic chaos reigned. World attention was focused on the little country (about the size of North Carolina) in 1946-49 as it became a center of political struggle between the Soviet Union and the bloc of western nations which opposed further Russian expansion.

Ancient Greece, with a recorded history going back to 776 B.C., reached the peak of its glory in the 5th century B.C., and by the middle of the 2nd century B.C., it had declined to the status of a Roman province. It remained within the Eastern Roman Empire until Constantinople fell to the Crusaders in 1204. In 1453, the Turks took Constantinople, and by 1460 Greece was a Turkish province. The insurrection made famous by the poet Lord Byron broke out in 1821, and in 1827 Greece was set up an independent nation, with sovereignty guaranteed by Britain, France and Russia.

Prince Otto of Bavaria was recognized as king five years later, but he was ousted by a revolution in 1862. Prince William of Denmark, as George I, succeeded him.

Up to this time Greece consisted only of the Peloponnesus and the lower part of the peninsula north of the Gulf of Corinth. Britain gave Greece the Ionian Islands in 1864, and Thessaly was added in 1881. Greek success in the Balkan Wars of 1912-13 brought the addition of Macedonia, Epirus, Crete and many Aegean Islands. In World War I, Greece kept a precarious neutrality until June, 1917, when King Constantine (who had succeeded George I in 1913) was forced to abdicate in favor of his second son, Alexander. Greece then entered the war on the Allied side. By the Treaty of Sévres, Greece was awarded Thrace and part of Asia Minor. Turkey, however, drove the Greeks out of Smyrna in 1922.

Greece was proclaimed a republic on March 25, 1924, and there followed strife and dissension between Royalists and Republicans, although fair order was maintained during the premierships of Eleutherios Venizelos from 1928 to 1933.

In 1935, the people voted for the return of King George II, who had abdicated in 1924 after a short rule. In April, 1936, General John Metaxas became premier and by August he had abolished parliament and set up a dictatorship.

Greece was invaded by the Italians in 1940. By April, 1941, the Greeks not only had driven the Italians out of Greece but were well into Albania. The Germans came to Mussolini's rescue, invaded Greece from Bulgaria, and took Athens on April 27, 1941. Starvation and harsh persecution of the Greeks were common during the Axis occupation. After liberation, Greece became a land of conflict with armed bands of Royalists and Communists terrorizing the nation. The government, which had fled the country, returned in Oct., 1944, following Greece's liberation by British forces. In less than two months, all the EAM (National Liberation Front) ministers, decided leftists, resigned from the government, setting up a crisis which brought on months of fighting between British troops and leftist resistance forces.

Peace was not restored until Feb. 12, 1945. Three short-lived premierships followed until the elections of March 31, 1946, gave a majority of Assembly seats to the Populist (Royalist) party. Its leader, Constantine Tsaldaris, became premier on April 18, 1946. However, all the leftist groups boycotted the March elections, and the depredations of armed bands of Communists and Royalists continued.

The country approved the return of George II by a large majority in a plebiscite held Sept. 1, 1946. The king returned

on Sept. 23 but died April 1, 1947, and was succeeded by his brother Paul I.

An important postwar development in troubled Greece has been the extension of U. S. financial and technical assistance, supervised by a U. S. mission. In May, 1947, the U. S. appropriated \$300,000,000 for Greek aid.

U. S. supplies enabled Greek forces to make good progress against the Communist guerrillas, and the cessation of hostilities was announced on Oct. 16, 1949.

U. S. aid has also had a stabilizing effect on perennially unstable Greek politics. Tsaldaris' right-wing cabinet yielded in Jan., 1947, to a coalition headed by Demetrios Maximos. A number of cabinets, mostly coalition in character, held office during the next five years, headed variously by Themistocles Sophoulis, premier from Sept. 7, 1947, until his death on June 24, 1949; Alexander Diomedes, Nicholas Plastiras and Sophocles Venizelos. Inconclusive elections were held on March 5, 1950, and Sept. 9, 1951. Following the enactment on Oct. 5, 1952, of an electoral law providing for a majority vote system instead of a proportional system, new elections were held on Nov. 16, 1952. These resulted in a sweeping victory for the Greek Rally party, which won 239 out of the 800 seats in the national assembly. Field Marshal Alexander Papagos, its leader, became premier on Nov. 18, 1952. **GOVERNMENT AND DEFENSE.** Greece is a constitutional hereditary monarchy. Nominal executive power is vested in the king, but the government is administered by a Council of Ministers, headed by the premier, which must enjoy the Assembly's confidence. Under the terms of the 1947 U. S. loan, U. S. officials are advising various departments of the government, which is noted for its inefficiency.

The sovereign, Paul I, was born Dec. 14, 1901, and was married Jan. 9, 1938, to Princess Frederika Louise of Brunswick. They have one son, Prince Constantine, born June 2, 1940 (the heir apparent), and two daughters.

Military service is compulsory. U. S. aid in 1948 made possible an increase in army strength from 120,000 to 132,000; the National Guard was also increased from 20,000 to 50,000. Greek forces, which were advised by a U. S. military mission, were demobilized to some extent following the cessation of hostilities with the guerrillas in Oct., 1949. An infantry unit of 1,000 men and several aircraft were dispatched to Korea. In Dec. 1952, the navy had one cruiser, 3 fleet destroyers, 4 submarines, and 19 frigates and escort craft.

**SOCIAL AND ECONOMIC CONDITIONS.** Education is compulsory for all children between the ages of 7 and 12. Illiteracy was estimated at 38 per cent in 1940. In

1951-52, there were 8,613 elementary schools, with 921,632 pupils; 314 secondary schools, with 178,098 pupils; and 2 universities (Athens and Salonika), with 6,730 students.

About three-quarters of the population engages in agricultural pursuits, although only one-fifth of the land is arable. Most of the cultivated area is devoted to cereals: wheat (1952: 1,050,000 metric tons), barley (213,000 tons) and maize (230,000 tons). There are also olive trees, vines, tobacco (1951: 62,000 metric tons) and currants. Olive oil production in 1952 was about 78,000 tons. The principal fruits are oranges, lemons, figs, mandarins, apples and pears. At the beginning of 1952, there were 7,651,000 sheep, 798,000 cattle and 590,000 hogs. Wool production in 1951 was 5,000 metric tons (clean basis).

Development of large-scale Greek manufacturing is blocked by lack of coal resources and of capital. The most valuable products are textiles, chemicals and food items. Among other processed or manufactured products are olive oil, wine, spirits, flour, carpets, leather, cigarettes and building materials. Postwar industrial rehabilitation has proceeded slowly, hampered by war damage and subsequent internal strife.

Postwar trade has been financed largely by U. S. aid. Recent figures are as follows (in millions of U. S. dollars):

	1950	1951	1952
Exports	91	102	119
Imports	422	435	346

Chief exports in 1952 were tobacco (44%) and currants and raisins (18%). Leading customers were Germany (30%), Britain (16%) and the U. S. (13%); leading suppliers, the U. S. (22%) and Germany and Italy (each 12%).

The large prewar merchant marine, comprising 589 ships of 1,812,723 tons and 710 sailing vessels of 55,417 tons, played a vital part in the national economy. World War II shipping losses amounted to 1,178,000 tons; the merchant marine on June 30, 1952, totaled 372 ships (100 tons and over) aggregating 1,274,446 gross tons, according to *Lloyd's Register*.

Railway mileage in 1950 totaled 1,665; highway mileage in the same year, 9,600, about 60 per cent of which was in poor condition. Reconstruction of the transport system, financed by U. S. aid, was completed in 1949; it included extensive work on highways, port and dry-dock facilities, railways and bridges.

The national budget for the fiscal year 1952-53 estimated revenue at 7,892,000,000 drachmas and expenditure at 8,291,000,000,000 drachmas. Postwar inflation was severe.

Greek minerals are varied but are exploited only moderately. Principal ones are lignite, iron ore, iron pyrites, magnesite, chromite, lead, bauxite, molybdenum, emery, marine salt and the country's famous marble. A fifth of the country is forested, largely with pine, fir and oak. Resin and turpentine are main forest products. The principal sea product is sponges.

**TOPOGRAPHY AND CLIMATE.** North central Greece, Epirus and western Macedonia all are mountainous. The main chain of the Pindus Mountains rises to 9,000 feet in places, separating Epirus from the plains of Thessaly. Greek Thrace is mostly a low-land region separated from European Turkey by the lower Maritsa River. The area of the mainland is 41,328 square miles. Among the many islands are the Ionian group off the west coast, 742 square miles in area; the Cyclades group to the south-east, 996 square miles; other islands in the eastern Aegean, including Lesbos, Samos and Khios, 1,486 square miles; and Crete, the fourth largest Mediterranean island, 3,199 square miles. Crete, largely mountainous, is about 160 miles in length, with a width varying from 7 to 35 miles.

The Dodecanese (area 1,035 sq. mi.), a group of 13 islands in the Aegean Sea near the coast of Asia Minor, were ceded to Greece by the 1947 Italian peace treaty and formally transferred on March 7, 1948.

The Greek climate is varied but generally similar to that of other Mediterranean countries. The maritime regions have a temperate climate, with short winters and little snow or frost. In the uplands the winters are long and severe. Precipitation is heaviest in the mountains. Mean temperature at Athens is about 63°, with maximum of 99° in July and minimum of 31.5° in January. The summer heat is moderated by sea breezes and cool northerly winds from the mountains.

## Guatemala (Republic) (República de Guatemala)

Area: 45,452 square miles.

Population (census 1950): 2,788,122 (Indian, 60%; white, 5%; mixed and other, 35%).

Density per square mile: 61.3.

President: Jacobo Arbenz Guzmán.

Principal cities (census 1950): Guatemala, 284,922 (capital); Quezaltenango, 27,696 (coffee, sugar); Puerto Barrios, 15,332 (port); Mazatenango, 11,032 (coffee).

Monetary unit: Quetzal.

Language: Spanish.

Religion: Roman Catholic.

**HISTORY AND GOVERNMENT.** Once the site of the ancient Mayan civilization, Guatemala was conquered by Spain in 1524 and for the next 300 years was the major center of Spanish government in Central

America. Guatemala was one of the founders of the Central American Union in 1823, and in 1839 set itself up as a republic. From 1898 to 1920 the dictator, Manuel Estrada Cabrera, ran the country, and from 1931 to 1944, General Jorge Ubico Castañeda was the "strong man." In July, 1944, the National Assembly elected General Federico Ponce president, but he was overthrown in October, and in December Dr. Juan José Arévalo was elected as the head of a leftist regime which continued to press its reform program in the face of conservative resistance. He took office on March 15, 1945. Jacobo Arbenz Guzmán, administration candidate, won the Nov., 1950, elections and took office March 15, 1951.

The eastern border is the object of dispute with Great Britain; in Feb., 1948, two British cruisers were dispatched to British Honduras to meet threatened attacks by Guatemala.

The Constitution of 1945 provides that a president shall be elected every six years by direct popular vote and cannot succeed himself immediately. Legislative power is vested in a unicameral National Assembly whose members are popularly elected for four-year terms, half the members being elected every two years. Guatemala has an army of 22,000. It also maintains a small air force.

**SOCIAL AND ECONOMIC CONDITIONS.** Education, advanced under Ubico, is free and compulsory. In 1949-50, the 3,397 primary schools had 164,815 pupils, while secondary and other schools had 57,708 students. The University of Guatemala is located in Guatemala City.

Most of the ruling class is drawn from the 5 per cent of the population that is white. Spanish is the official language, but at least eighteen Indian dialects are spoken. The Indians are the chief labor supply.

Agriculture engages 90 per cent of Guatemalans. Coffee accounts for a fifth of the cultivated land and a large part of the exports. Recent foreign-trade data are as follows (in millions of quetzales):

	1950	1951	1952
Exports	67.6	76.1	87.5
Imports	71.2	80.8	75.7

In 1952, the U. S. took 83% of the exports and supplied 63% of the imports. Chief exports in 1952 were coffee (82%) and bananas (5%). Imports included flour, petroleum products, drugs and textiles.

Guatemalan manufacturing is small and local. The country has 600 miles of public railway connecting the coasts, 280 miles of private railway and 4,800 miles of highways. Puerto Barrios, on the Atlantic side,

is the main port of entry, and is linked by rail to the capital.

The national budget for 1953-54 provided for expenditure of \$72,300,000; on Dec. 31, 1951, the internal debt was reported at \$18,898,743 and the external debt at \$86,480.

Guatemala has reserves of gold, silver, lead, tin, copper, mercury, coal, antimony, salt, chromite and sulfur, but many of these minerals exist in insufficient quantity to justify exploitation, and only lead and chromite are produced commercially.

The country's vast forests, mostly in the Petén region, yield chicle for chewing gum, cinchona bark, a small amount of rubber, and dyewoods and cabinet woods, such as cedar, mahogany and logwood. About 15,000,000 acres are in hardwoods and 3,000,000 acres in softwoods.

**TOPOGRAPHY AND CLIMATE.** Most of Guatemala is mountainous, with many volcanic peaks, including Tajumulco, 13,814 feet high and the loftiest in Central America. The northern part is the great plain of Petén, largely uncultivated, sparsely populated, and geographically part of the Yucatán peninsula. The narrow Pacific slope, well watered and fertile, is the most densely populated and the most productive part of Guatemala. The climate is hot and humid on the coasts, with heavy rainfall, but is temperate in the highlands. The rainy season lasts from May to October in the interior, and often until December on the coast. January is the coldest month and May the warmest.

## Haiti (Republic) (République d'Haiti)

Area: 10,748 square miles.  
Population (census 1950): 3,111,973 (Negro, 95%; mulatto, 5%).

Density per square mile: 289.5.

President: Paul E. Magloire.

Principal cities (census 1950)\*: Port-au-Prince, 142,840 (capital, chief port); Cap-Haïtien, 24,957 (seaport); Gonaïves, 13,534 (farming district); Les Cayes, 11,335 (seaport; coffee).

Monetary unit: Gourde.

Language: French.

Religion: Roman Catholic.

\* Cities proper, excluding surrounding communes.

**HISTORY.** Haiti, the only Negro republic in the Western hemisphere, occupies the western third of the island of Hispaniola, which was discovered by Columbus in 1492. Its political past is stormy, and today it is the smallest and most thickly populated of the American republics, a nation beset by illiteracy and poverty.

After successive Spanish and French domination, Haiti became a kingdom in

1801 under Toussaint L'Ouverture, a Negro leader. He was later captured by the French and died in prison, but the kingdom lasted and declared its independence in 1804, becoming a republic in 1820. In 1822 Haiti took over all of Hispaniola, and carried on until 1843, when the eastern two-thirds of the island revolted and established the Dominican Republic. Today the island is the only one in the world containing two sovereign nations.

Decades filled with revolution, corruption and disease came to a bloody climax in 1911-15, when Haiti had seven presidents in four years. After the assassination of the last one, United States Marines moved in. By a 1916 treaty, the United States agreed to help administer the country until the Haitians proved themselves capable of orderly self-government. The last Marines left in 1934, but a U. S. fiscal expert continued to supervise customs until 1941. On January 11, 1946, President Elie Lescot was driven from the country by revolution, and a three-man military junta took over until the election of President Dumarsais Estimé on Aug. 16, 1946. He was ousted in 1950 and succeeded after new elections by Paul E. Magloire.

**GOVERNMENT.** Normally the president is elected for six years by two-thirds vote of the National Assembly. That body consists of a 37-member Chamber of Deputies, elected for four years by popular vote; and a 21-member Senate elected for six years. The Garde d'Haiti, about 5,000 strong, serves as army and police force.

**SOCIAL AND ECONOMIC CONDITIONS.** Most Haitians are descended from African slaves. Their illiteracy rate is estimated at 92 per cent. Although 1949 figures showed enrollment of 97,000 in primary and secondary schools, actual attendance is probably lower. A campaign against illiteracy under UNESCO auspices was initiated in 1947. The mulattoes—lightened by the blood of the early French settlers—dominate the political and social life of the nation. Many of them are Paris-educated. While the ruling classes speak pure French, most of the people speak the patois of Creole French, and many of them still practice the strange folk religion of voodoo.

Haiti is predominantly agricultural. Coffee, which makes up more than 30 per cent of Haitian exports, is the principal crop, followed by sisal, sugar cane, cotton, bananas and cacao. Coffee exports in 1951-52 amounted to 31,298 metric tons. Manufacturing is almost entirely for local consumption, but there are several sisal factories and sugar refineries.

Recent trade data are as follows (in millions of pounds):

	1949-50	1950-51	1951-52
Exports	192.4	248.0	264.6
Imports	181.0	222.6	253.5

Leading exports in 1951-52 were coffee (62%), sisal (23%) and sugar (8%). Leading customers were the U. S. (58%), Belgium (23%) and Italy (8%). The U. S. was the chief supplier (69%).

In 1951 Haiti had about 2,000 miles of improved road and 180 miles of railway. International air service is provided by PAA and KLM.

More than 75 per cent of Haitian revenue is derived from customs duties on exports and imports. The 1952-53 budget balanced at approximately \$27,778,900. The public debt on Sept. 30, 1952, was \$5,657,400, almost all internal.

Minerals, relatively unexploited, include gold, silver, iron, copper, antimony, tin, coal, nickel and gypsum. In 1943, a sizable bauxite deposit was found and signed over for U. S. development. Inland Haiti has forests of mahogany, pine, lignum vitae and other commercial woods. Output of the fisheries is insufficient for local needs.

**TOPOGRAPHY AND CLIMATE.** Haiti, about the size of Maryland, is two-thirds mountainous, with the rest marked by great valleys, extensive plateaus and small plains. The most densely populated and productive region is the Cul de Sac plain, near Port-au-Prince. Rivers are swift and generally not navigable. The climate is hot on the coast, temperate in the mountains, with hurricanes frequent in the May-to-October rainy season. Port-au-Prince has a mean annual temperature of 81°.

## Hashemite Kingdom of Jordan. See Jordan

## Honduras (Republic) (República de Honduras)

Area: 59,145 square miles.

Population (census 1950): 1,368,605 (mestizo, 86%; Indian, 10%; Negro, 2%; white, 2%).

Density per square mile: 23.1.

President: Juan Manuel Gálvez.

Principal cities (census 1950): Tegucigalpa (including twin city of Comayagüela), 72,385 (capital); San Pedro Sula, 21,139 (bananas); La Ceiba, 16,645 (seaport, bananas); Tela, 12,614 (seaport).

Monetary unit: Lempra.

Language: Spanish.

Religion: Roman Catholic.

**HISTORY AND GOVERNMENT.** Columbus discovered Honduras on his last voyage in 1502; it was a Spanish colony and part of Guatemala until 1821, the year of the general Central American revolt against Spain. Honduras declared its independence in 1838, and has been troubled by revolution and war ever since. American Marines intervened in 1903 and 1923. In 1931, 1932

and 1937, major revolutions were crushed by force. The Nicaraguan-Honduras boundary dispute of 1937 almost caused war, and in April, 1945, the country was invaded from Guatemala by a group of Honduran exiles, who were suppressed.

Legislative power is held by the unicameral Congress of Deputies, whose 49 members are popularly elected for six years. The president also is elected for six years and is not supposed to succeed himself, but Congress twice extended the term of President Tiburcio Carías Andino. His 16-year tenure ended Jan. 1, 1949, when Juan Manuel Gálvez, the administration candidate in the Oct., 1948, elections, took office.

Military service is compulsory. The army is estimated to be slightly under the 2,500 strength agreed upon by the Central American states.

**SOCIAL AND ECONOMIC CONDITIONS.** Education is free and supposedly compulsory, but less than 25 per cent of the children go to school. The government is trying to reduce illiteracy, estimated at 82 per cent. In 1951, there were 2,061 primary schools with 106,438 students, 21 secondary schools with 1,107 students, and 38 normal and commercial schools with 4,132 students. The National University at Tegucigalpa had 796 students.

Most of the population is of mixed Spanish-Indian blood, but the ruling class is of nearly pure Spanish descent. Except among isolated Indian tribes, Spanish is the common language. Most of the Negroes are British subjects imported for plantation work.

Honduran economy depends upon bananas, which usually account for more than 50 per cent of the nation's exports. The biggest plantations are along the northern coast. Exports in 1951-52 totaled 13,781,286 stems, more than 90 per cent produced by two U. S. companies. Other crops are corn, coffee, rice, heneguen, tobacco and coconuts. Honduras also is an important source of sarsaparilla. Cattle raising and dairy farming flourish on rich pasture lands. Manufacturing is small and local.

Recent foreign trade data are as follows (in millions of lempiras):

	1949-50	1950-51	1951-52
Exports*	43.5	53.7	68.9
Imports	68.3	78.9	109.2

\* Unadjusted for banana undervaluation.

In 1950-51, the U. S. took 73% of the exports (after adjustments for banana undervaluation totaling 101,400,000 lempiras) and supplied 73% of the imports. Leading exports were bananas (64%), coffee (8%) and silver (3%).

Honduras' railroads—920 miles—are almost entirely owned by fruit companies

and used to transport bananas; they are confined to the northern coastal area. Since the country is mountainous and rugged, aviation has become an important means of travel. Despite its small size, the country has many landing fields. Highway mileage is estimated at 1,200 miles. Lake Yojoa and several rivers are navigable for small vessels.

The budget for the fiscal year 1952-53 was estimated at 34,509,434 lempiras. The internal debt was 7,961,425 lempiras on June 30, 1952; the external debt, 323,875.

In 1950 Honduras produced 30,379 fine ounces of gold and 3,075,389 fine ounces of silver; these are the two most important mineral products. Copper and iron exist in paying quantity but are undeveloped. The country is noted for rich forest resources, particularly the tropical hardwoods. In 1950-51, 1,784,722 bd. ft. of mahogany lumber and logs and 41,091,633 bd. ft. of pine were exported.

**TOPOGRAPHY AND CLIMATE.** Honduras, in the north central part of Central America, has a 400-mile Caribbean coast-line and a 40-mile Pacific frontage. Generally mountainous, it has fertile plateaus and river valleys and narrow coastal plains. The Bahía (Bay) Islands, off the north coast, produce large quantities of coconuts. Of numerous rivers on the northern slope of Honduras, the Ulua drains a third of the nation and is navigable for most of its course. The climate is oppressive in the coastal lowlands, pleasant in the interior highlands. At Tegucigalpa, maximum temperature is about 90° (in May), and minimum 50° (December).

## Hungary (Republic)

Area: 35,893 square miles.

Population (estimated 1951): 9,390,000 (Magyar, German, Slovak).

Density per square mile: 261.6.

Chairman of Presidium: István Dobi.

Prime Minister: Imre Nagy.

Principal cities (census 1948\*): Budapest, 1,058,288 (capital, Danube port); Szeged, 132,688 (textiles, wheat); Debrecen, 119,570 (livestock); Kecskemét, 88,283 (horticulture); Pécs, 77,529 (farming).

Monetary unit: Forint.

Languages: Hungarian, German, Slovak.

Religions (est.): Roman Catholic, 64.9%; Greek Catholic, 2.3%; Helvetian Evangelical, 20.9%; Augsburg Evangelical, 6.1%; Jewish, 5.1%; others, .7%.

\* Provisional figures.

**HISTORY AND GOVERNMENT.** Fascist-minded militarists and greed for more territory lined up Hungary with Germany and Italy just before World War II. The fruits of this alliance and the resultant defeat of Hungary were a smashed economy, wild inflation, poverty, Soviet occupation and a reparations debt of \$300,-

000,000. Politically the Soviet-supported Communist minority was thoroughly defeated by the conservative Small Landholders in the 1945 elections, yet it succeeded in taking over most of the key positions in the government. Controlling the police, the Communists eventually forced Prime Minister Ferenc Nagy to resign on May 30, 1947, and secured the appointment of a leftwing Smallholder, Lajos Dinnyes, in his place. The Communists emerged as the strongest single party in national elections held Aug. 31, 1947. President Zoltan Tildy resigned July 30, 1948, and was replaced by leftist Árpád Szakasits. István Dobi, also a leftwing Smallholder, replaced Dinnyes on Dec. 10, 1948.

The Communist regime devoted itself to the transformation of Hungary into a people's democracy modeled after the U.S.S.R. Szakasits was replaced by Sandor Ronai on Apr. 26, 1950. Communist leader Matyas Rakosi became prime minister Aug. 15, 1952, and Dobi became chairman of the presidium. Rakosi stepped down in favor of Imre Nagy, another Communist, on July 4, 1953.

Two thousand years ago Hungary was part of the Roman provinces of Pannonia and Dacia on the empire's borders. In A.D. 894 it was invaded by the Magyars, who founded a kingdom. Christianity was accepted during the reign of Stephen I (St. Stephen) from 997 to 1083. The peak of Hungary's great period of medieval power came in 1342-82 under King Louis the Great (Louis I) of Anjou, whose dominions touched the Baltic, Black and Mediterranean Seas. When the Turks smashed a Hungarian army in 1526, western and northern Hungary accepted Hapsburg rule to escape Turkish occupation. Transylvania became independent under Hungarian princes. Intermittent war with the Turks was waged thereafter for some years.

After the suppression of the 1848 revolt against Hapsburg rule led by Louis Kossuth, the dual monarchy of Austria-Hungary was set up in 1867.

The dual monarchy was defeated with the other Central Powers in World War I, and the new Hungary underwent hard times. First there was a short-lived Socialist Republic in 1918. The chaotic Communist rule of 1919 under Béla Kun ended with the Rumanians occupying Budapest on Aug. 4, 1919. When the Rumanians left, Admiral Nicholas Horthy entered the capital with a national army. The Treaty of Trianon of June 4, 1920, cost Hungary 75 per cent of its land and more than 50 per cent of its population. Meanwhile, the National Assembly had restored the legal continuity of the old monarchy, and on March 1, 1920, Horthy was elected regent. Former King Charles made two unsuccessful

efforts to return to the throne in 1921.

After 1920 Hungary was, in effect, ruled by its great land owners, but the turn came in 1932 with the accession of General Julius de Gömbös, a pro-Fascist, as prime minister. Under Gömbös and his successors, Kaloman Daranyi in 1936 and Béla Imrédy in 1938, co-operation with Italy and Germany was Hungary's guiding principle. Hungary signed the anti-Comintern pact on Jan. 13, 1939, and the Three Power Pact of Germany, Italy and Japan on Nov. 20, 1940. As inducement and reward for these actions, Hungary got part of Slovakia and all of Ruthenia from Czechoslovakia in 1938 and 1939; and northern Transylvania from Rumania in 1940.

Following the German invasion of Russia on June 22, 1941, Hungary joined the attack against the U.S.S.R., but the war was not popular and Hungarian troops were almost entirely withdrawn from the eastern front by May, 1943. The government of Nicholas von Kállay was overthrown March 19, 1944, and German occupation troops set up a puppet government after Admiral Horthy's appeal for an armistice with advancing Soviet troops had resulted in his overthrow on Oct. 16. The German regime soon fled the capital, however, and on Dec. 23 a provisional government was formed in Soviet-occupied eastern Hungary. On Jan. 20, 1945, it signed an armistice in Moscow.

On Feb. 1, 1946, the National Assembly approved a constitutional law abolishing the 1,000-year-old monarchy and establishing a republic. Up to that time, Admiral Horthy had been regent for a non-existent king.

The Soviet-type constitution adopted by Parliament on Aug. 18, 1949 declared Hungary to be a "people's republic." The supreme organ of state control was declared to be the Parliament, with deputies elected every 4 years by direct vote. When Parliament is not in session, power is exercised by the presidium headed by a chairman. Executive power is vested in the cabinet headed by the premier.

Only the Communist-controlled, leftwing coalition was represented in the National Assembly after elections held May 15, 1949, in which only one slate of candidates was presented.

**PEACE TREATY OF 1947.** The final peace treaty which took effect Sept. 15, 1947, fixed Hungary's frontiers as they were on Feb. 1, 1938, except that a small bridgehead on the south bank of the Danube opposite Bratislava was ceded to Czechoslovakia. Hungary was to pay reparations of \$300,000,000 over a period of 8 years, \$200,000,000 to the Soviet Union and \$100,000,000 to Yugoslavia and Czechoslovakia. The treaty also provided freedom of navi-

gation on the Danube for nationals of all states.

The strength of Hungarian armed forces was fixed by the treaty as follows: army, 65,000, including frontier, anti-aircraft artillery and river flotilla personnel; air force, 90 planes with a personnel of 5,000. Soviet troops are permitted to maintain communication through Hungary to Austria until a treaty with Austria takes effect.

**SOCIAL AND ECONOMIC CONDITIONS.** Education is state-controlled and is compulsory between the ages of 6 and 14. Parochial schools were nationalized in 1948. In 1950-51 there were 6,185 elementary and general schools, with 1,229,957 pupils, and 389 secondary schools, with 94,046 pupils. The 21 universities and colleges had 31,000 students.

Under laws passed in 1927-28, optional social insurance was placed under the control of the national social insurance institute, which offered medical, hospital, old age and disability insurance. Insurance for farmers was made obligatory. The Land Reform Act issued in March, 1945, provided for the confiscation of all estates over 1,500 acres; about 8,000,000 acres were divided among some 500,000 families.

Agriculture is the basis of Hungarian economic life, engaging more than half the population. Of the total area, 63.6 per cent can be cultivated and 17.9 per cent is meadowland and rough pasture. Cereals grown in the fertile Danubian plains are the chief crops. Leading crops in 1950 were wheat (2,040,000 metric tons), potatoes (1,224,000 tons), barley (640,000 tons), rye (790,000 tons), oats (220,000 tons), corn (1948) (2,862,000 tons), and sugar beets. In addition, cultivation of vines, fruit and garden produce is important; the famous Tokay wine is produced on the southern slopes of the Hegyalja in the northeast. Wine production averages 100,000,000 U. S. gallons annually (1951: 97,200,000 U. S. gallons).

Horse-breeding is a traditionally important branch of agriculture. Hungarians have a great love for horses, and their excellent breeds were exported in large numbers before World War II. Livestock in 1951 included 1,700,000 cattle, 4,500,000 hogs and (1949) 600,000 horses and 700,000 sheep.

The dominant industries are all based on agriculture, with flour milling in first place, followed by sugar refining, brewing and canning. The second group of industries make hardware and machinery. Most of the machine industry is concentrated in Budapest and Győr. Cotton leads the textile industry, especially in Budapest, which is also a center of woollen manufactures. Hemp and flax weaving are important. An estimated 600,000 persons were employed

in all industries in 1950. Approximately 90 per cent of industrial production was nationalized under laws enacted in 1946 and 1948. Legislation in the latter year affected about 500 mining and industrial enterprises employing more than 100 persons each. In addition, the Soviet Union has taken over all German-owned plants as reparations, and in 1946 Soviet-Hungarian companies were formed to exploit bauxite, petroleum, and air and river navigation.

Foreign trade figures for two years are as follows (in millions of forints):

	1947	1948
Exports*	1,042	1,933
Imports	1,453	1,975

\* Excluding reparations shipments.

The chief customers in 1948 were Britain, 17 per cent; U.S.S.R., 17 per cent; Czechoslovakia, 13 per cent; and Austria, 7 per cent. The leading suppliers were U.S.S.R., 15 per cent; Yugoslavia, 15 per cent; Britain, 14 per cent; and Czechoslovakia, 13 per cent. Chief exports were grain, 15 per cent; textiles, 12 per cent; live animals and animal products, 11 per cent; and machinery, 9 per cent. Leading imports included coal, oil, iron and steel products, forest products, minerals and ores.

The focal point in the country's transportation system is the Danube River, navigable for 423 miles in Hungary. The nation's central location makes it the center of an important transit trade; its pre-war river fleet was the largest on the Danube. Railroad mileage in 1951 totaled 7,100; highway mileage in that year, 15,978. Transportation facilities suffered heavy damage in the last part of World War II.

The 1952 budget placed revenue at 42,770,000,000 forints and expenditure at 42,481,000,000 forints.

While Hungary generally is mineral-poor, it has an estimated 250,000,000 tons of bauxite—about 25 per cent of the world's known reserves. Production in 1951 was estimated at 594,000 metric tons. The coal is of low quality and is insufficient to meet domestic needs; production in 1951 was estimated at 1,200,000 metric tons and that of lignite at 9,500,000 tons. Other minerals include iron ore, manganese and gold. Petroleum production in 1950 was about 4,200,000 barrels. Uranium is reported to exist in Hungary.

About 12 per cent of Hungary is forested, but the products are of little importance. There are valuable fisheries in Lake Balaton and on the Danube.

**TOPOGRAPHY AND CLIMATE.** Most of Hungary is a fertile, rolling plain lying east of the Danube, and drained by the Danube and the Tisza Rivers. In the extreme northwest is the Little Hungarian

Plain. South of that area is Lake Balaton, 250 square miles, the largest lake of western and central Europe; to the west of it lies the Bakony Forest, part of an upland extension of the Alps, called the Hungarian Mittelgebirges. Entering Hungary in the northwest, the Danube flows south through the central plain. The Tisza, rising in the eastern Carpathians, also flows south through eastern Hungary.

Hungary's mean annual temperature ranges from 48° in the north to 52° in the south. Precipitation varies from 30 to 35 inches in the Bakony Forest to less than 15 inches in the east; most of the rain falls in May and June. High summer temperatures and a long autumn are favorable to agriculture.

## Iceland (Republic)

(Ísland)

Area: 39,709 square miles.\*

Population (est. Dec. 31, 1952): 148,938 (almost entirely Icelandic).

Density per square mile: 3.8.

President: Asgeir Asgeirsson.

Prime Minister: Steingrímur Steinthorsson.

Principal city (est. 1952): Reykjavík, 58,761 (capital and only large town).

Monetary unit: Króna.

Languages: Icelandic, Danish.

Religion: Evangelical Lutheran.

\* Including several off-shore islands.

**HISTORY.** Iceland, in the North Atlantic on the rim of the Arctic Circle, did not fight in World War II, but still it won and lost in the conflict. It won its complete independence from Denmark but lost its placid isolation when the United States and Great Britain moved in to prevent German seizure, and to establish air and naval bases. A new era then dawned for Iceland. Because of its strategic position on the great-circle air route between America and Europe, about half way between New York and Moscow, the country assumed new significance in an air-minded world.

Iceland was first settled shortly before 900, mainly by Norse. A constitution drawn up about 930 created a form of democracy and provided for an Althing, or General Assembly, now the oldest legislative body in the world. In 1262-64, Iceland came under Norwegian-Danish rule. Through five centuries of intermittent plague, earthquake, famine and volcanic eruption, the stout Icelanders endured, and in 1874 they obtained their own constitution. In 1918 Denmark recognized Iceland as a separate state with unlimited sovereignty, but still nominally under the Danish king. On June 17, 1944, after a popular referendum, the Althing proclaimed Iceland a completely independent republic.

The British occupied Iceland in 1940, im-

mediately after the German invasion of Denmark. In 1942, the United States took over the burden of protection. Iceland refused to abandon its neutrality in World War II, and thus forfeited charter membership in the United Nations, but it was co-operative with the Allies throughout. Iceland joined the North Atlantic treaty organization in 1949, and in May, 1951, U. S. troops again landed at Iceland's request to aid in its defense preparations.

Asgeir Asgeirsson was elected president June 29, 1952, upon the death of Sveinn Björnsson, president since 1944.

**GOVERNMENT.** Constitutionally, the president is elected for four years by popular vote. Executive power of the state resides in the prime minister and his cabinet. The Althing is composed of two houses, one with 17 members and the other with 35; each has equal constitutional power.

Iceland has no army or navy.

**SOCIAL AND ECONOMIC CONDITIONS.** Illiteracy is virtually unknown in Iceland. Education is compulsory from 7 to 14, and mobile schools are sent traveling through the sparsely settled areas. When the University of Iceland, established in 1911, needed new buildings in 1935, the government licensed it to conduct a national lottery to raise the funds. The high number of scholarships and the low tuition fees make higher education virtually free to any qualified applicant.

Iceland publishes more books, newspapers and magazines per capita than any country in the world. Its language, Icelandic, has no dialects and has changed little through the centuries. In addition, Danish is widely understood and spoken. The Evangelical Lutheran Church is state-supported, but there is complete religious freedom. A social insurance system set up in 1935 and extended in 1946 provides accident, sickness and old age benefits, as well as hospital and medical care.

Approximately six-sevenths of Iceland is unproductive, and only one-fourth of one per cent is under cultivation. With about 30 per cent of the population engaged in farming, sheep raising is the most important branch of this industry. Hay, potatoes and turnips are the principal crops.

About one-sixth of the people are engaged in fishing, and fish and fish products make up the bulk of Iceland's exports. The annual catch averages approximately 350,000 metric tons. British, French and Norwegian fishing craft visit Iceland's fisheries, which lead the world in cod and are important for herring, plaice and halibut.

Recent trade data are as follows (in millions of krónur):

	1950	1951	1952
Exports	421.9	726.6	659.8
Imports	543.3	923.7	911.4

Fish and fish products accounted for 93% of the exports in 1952. Leading customers were the U. S. (25%), Britain (13%) and Italy (11%); leading suppliers, Britain (21%), the U. S. (20%) and the Netherlands Antilles (16%).

Iceland has no railways. Highways total about 4,450 miles. In Oct. 1952 the merchant marine had 551 vessels (12 tons and over), aggregating 96,939 gross tons.

Expenditure for the calendar year 1953 was estimated at 422,055,000 kr.; revenue, at 423,045,000 kr. The national debt was 450,917,000 kr. on Dec. 31, 1951.

**TOPOGRAPHY AND CLIMATE.** Iceland, a bleak, volcanic island about the size of Kentucky, has maximum dimensions of 298 by 194 miles; it is mostly tableland, high, rugged and barren. It is one of the world's most volcanic regions. Mt. Hekla (4,747 ft.), near the southern coast, is the most notable of its volcanoes, many of which are still active and cause frequent earthquakes. Small fresh-water lakes are found throughout the island, and there are many natural oddities, including hot springs, geysers, sulfur beds, canyons, waterfalls and swift rivers. More than 13 per cent of the area is covered by snowfields and glaciers, and most of the people live in the 7 per cent of the island comprising fertile coastlands. One-third of the much-indented, 3,730-mile coastline belongs to a peninsula to the northwest, joined to the mainland by an isthmus four miles wide. Vegetation is of the Arctic type, mostly stunted. Except for peat and fisheries, Iceland has no natural resources.

The Gulf Stream modifies Iceland's climate to make it much like that of southern Canada, though with longer winters and shorter summers. The mean annual temperature at Reykjavik is 39.4°, with January the coldest month (34.2°) and July the warmest (51.6°).

## Indonesia (Republic)

(Republik Indonesia)

**Area:** 583,479 square miles.\*

**Population** (est. 1952): 78,163,357 (Native except for 1,190,014 Chinese, 240,162 European [208,269 Dutch], and 7,195 Japanese in 1930).

**Density** per square mile: 134.0.

**President:** Achmed Sukarno.

**Premier:** Ali Sastroamijoyo.

**Principal cities** (est. 1951): Jakarta (Batavia), 2,800,000 (capital); Jokjakarta, 1,848,886 (former Republican capital); Surabaya, 714,898 (seaport, naval base); Bandung, 659,213 (commercial center, west Java); Semarang, 310,942 (seaport, central Java); Surakarta, 266,365 (sugar, tobacco).

**Monetary unit:** Rupiah.

**Languages:** Bahasa Indonesia (Malay) (official), Dutch, Javanese, Sundanese, Madurese.

**Religions:** Mohammedan (predominant), Christian (about 2,500,000), Brahmin, Buddhist.

\* Excluding Netherlands New Guinea.

**HISTORY.** The sovereign state of Indonesia, a group of islands with a total area more than twice that of Texas, constitutes one of the world's richest natural areas. These islands—Sumatra, Java, Madura, central and southern Borneo, Celebes and the Moluccas—would reach from San Francisco to Honolulu if their extent was transposed to the eastern Pacific. They have great wealth in tin, rubber, spices, oil, quinine and copra. Postwar economic recovery, however, was retarded in Java and Sumatra by conflict between the Dutch and native nationalists, and between the latter and Communists.

During the first few centuries of the Christian era, most of the islands came under the influence of Hindu priests and traders who spread their culture and religion. Moslem invasions began in the 13th century, and most of the area was Moslem by the 15th century. Portuguese traders arrived early in the 16th century but were ousted by the Dutch about 1595. After Napoleon subjugated the Netherlands homeland in 1811, the British seized the islands but returned them to the Dutch in 1816. Political and economic reforms were introduced about 1870, and in 1903 the natives won a part in local affairs. In 1922 the islands were made an integral part of the Netherlands kingdom.

In World War II, Japanese troops began their attacks in early 1942; they took Batavia on March 5 and the big naval base at Surabaya by March 10. Japanese military occupation with nominal native self-government continued until Aug., 1945, except in outlying parts of New Guinea and Borneo. About the time of the Japanese surrender, a self-styled Indonesian Republic headed by Achmed Sukarno sprang up and took over effective control of parts of Sumatra and Java. Allied forces, mostly British Indian troops, moved in, and fighting between them and the nationalists continued until Nov. 15, 1946, when Dutch-native negotiations resulted in a draft agreement initialed at Linggadjati, near Cheribon. The agreement was formally signed by Dutch and Indonesian authorities on March 25, 1947.

Under this agreement there was to be formed by Jan. 1, 1949, the Netherlands-Indonesian Union, consisting on the one hand of the Netherlands, Curaçao and Surinam, and on the other of the United States of Indonesia. The latter was to be a sovereign state composed of three equal states: the Republic of Indonesia (Java, Sumatra, Madura), East Indonesia (Celebes, the Moluccas, Bali, Lombok, Dutch Timor), and Borneo.

Plans for implementing the agreement,

however, remained in controversy, and fighting between the Dutch and the nationalists broke out anew on July 20, 1947. Dutch forces made large gains in both Sumatra and Java and regained control of Madura. Both sides issued cease-fire orders on Aug. 4, 1947, in response to a call from the U. N. Security Council, which named a Good Offices Commission under whose auspices the Dutch and the Republic signed another truce on Jan. 17, 1948, aboard the U.S.S. *Renville*. A provisional federal government for the whole area was installed on Mar. 9, 1948, but difficulties between the Dutch and the Republic continued. On Dec. 18, 1948, Dutch forces instituted "police" action against Republican areas and seized the Republican leaders. Hostilities ceased Jan. 1, 1949, following U. N. intervention. On May 7, the Dutch agreed to return the exiled Republican regime to central Java.

Negotiations for establishment of the federation culminated in inter-Indonesian agreement on the terms of union on Aug. 2, 1949, and on a provisional constitution on Oct. 30. On Nov. 2, Dutch and Indonesian leaders agreed upon the terms of union between the Netherlands and Indonesia. Dr. Sukarno was elected president of the federation on Dec. 16 by representatives of the Indonesian states, and the first all-Indonesian cabinet was formed with Mohammed Hatta as premier. The transfer of sovereignty took place at Amsterdam on Dec. 27, 1949.

**GOVERNMENT.** Under the statute of union between the Netherlands and Indonesia, both are sovereign independent nations joined together in the person of the Queen of the Netherlands. The statute provides for economic, financial and military co-operation.

Indonesia, originally a federal state, is now a unitary state consisting of 10 provinces under the constitution promulgated on Aug. 15, 1950. Legislative power is vested in the 220-member People's Representative Council, composed of members of the former Federal and Republican parliaments. Executive power is exercised by the president and the premier and his cabinet.

Dutch forces were evacuated from Indonesia in the first part of 1950, and Indonesian members of the Royal Netherlands Indies army were incorporated into the federal army.

**SOCIAL AND ECONOMIC CONDITIONS.** There are institutions of higher learning at Jakarta and Bandung, and numerous schools are maintained by Christian missionaries.

In 1949-50 there were 24,542 primary schools, with 4,212,031 pupils; 1,259 secondary schools, with 165,399 students; and

681 Chinese schools, with 162,315 pupils.

The islands of Java and Madura, with only nine per cent of the area, have more than two-thirds of the population, and are among the most densely settled areas in the world (more than 800 per sq. mi.). The natives, including about 137 races and tribes, are mainly of Malayan stock, with the Javanese the most advanced.

Agriculture engages about 70 per cent of the adult males. Rich in a variety of crops, the islands prior to World War II produced about 31 per cent of the world's copra, 37 per cent of its rubber, 83 per cent of its pepper, and nearly all of its quinine. The big-estate agriculture on Java and Sumatra is devoted mainly to export. The rest is subsistence agriculture. Rice is the staple food and chief crop; production in 1952 was 12,389,400 metric tons (paddy). Major plantation crops, with 1952 production in metric tons, are rubber, 769,473; tea, 36,955; coffee (estates only), 12,549; cinchona bark, 3,601; palm oil, 145,995; palm kernels, 38,509.

Others are sugar, cacao, spices, agave fiber, copra and kapok. In addition to rice, the chief food crops are maize, cassava, sweet potatoes, peanuts and soybeans.

Livestock included in 1949-50, 3,618,000 cattle, 1,254,000 hogs, 2,773,000 carabaos and 616,000 horses.

Industry, especially in Java, developed rapidly after 1930. In addition to industries connected with the processing of the rich natural products, there were established chemical works, textile and paper mills, soap factories, breweries, shipyards, a Goodyear tire and rubber plant and a General Motors assembly plant. War damage was severe.

Indonesia is primarily an importer of consumer and capital goods and an exporter of mineral and plantation products. Recent trade data are as follows (in millions of rupiahs):

	1950	1951*	1952†
Exports	2,954	4,676	10,387
Imports	1,638	3,060	10,533

\* Preliminary. † Rupiah devalued Feb. 4, 1952.

Chief exports in 1952 were rubber (46%), petroleum and products (19%), tin (9%), copra (6%) and tea (3%). Leading customers were the U. S. (26%), Singapore (24%), the Netherlands (22%) and Britain (3%); leading suppliers, the U. S. (17%), Japan (14%), the Netherlands (13%) and Britain (7%).

In 1948 there were 2,400 miles of main road, mostly in Java and Sumatra; and in 1950, 3,960 miles of railway, of which about three-fourths were in Java and a fourth in Sumatra.

Recent financial data are as follows (in millions of rupiahs):

	1951*	1952†	1953†
Revenue	11,824.4	13,235.9	11,422.1
Expenditure	10,921.8	17,562.9	13,216.1

\* Provisional. † Budget estimate.

The public debt was reported provisionally at 6,620,000,000 rupiahs on Jan. 31, 1951.

Petroleum is the principal mineral product of modern Indonesia. The fields, in Sumatra, east Borneo and east Java, produced 8,523,395 metric tons (about 66,575,000 barrels) in 1952 and exceeded pre-World War II production for the first time.

The tin industry attained prewar levels more rapidly than others after World War II; production in 1952 was 35,002 long tons. Other important minerals include bauxite (1952: 343,754 metric tons), coal (950,000 tons), salt, nickel and manganese. Deposits of uranium are reported.

Forests, covering much of the area except Java, yield such products as timber, rattan, bamboo, gum, wild rubber, gutta-percha and quinine. Most valuable timber is teak, found mostly in east Java. Ebony, sandalwood and ironwood also are cut.

**TOPOGRAPHY AND CLIMATE.** A backbone of high mountain ranges with many snow-capped peaks extends throughout the main islands of the archipelago. Earthquakes are frequent, and there are many active volcanoes, 90 of them in Sumatra. Borneo is heavily forested.

The climate throughout the group is equatorial and monsoonal, with little variation of temperature (yearly average about 80°; at Batavia, 79°) and rainfall averaging over 100 inches a year. In Sumatra and Java the hot and rainy season usually lasts from May to October; December and January are relatively cool and dry; February, March and April, hot and dry.

## Iran (Kingdom)

Area: 634,413 square miles.

Population (est. 1951)\*: 20,000,000 (Iranian, Kurdish, Azerbaijani).

Density per square mile: 31.5.

Ruler: Mohammed Riza Pahlavi.

Prime Minister: Fazollah Zahedi.

Principal cities (est. 1948): Teheran, 850,000 (capital); Meshed, 250,000 (Moslem shrine); Tabriz, 214,000 (capital, Azerbaijani); Isfahan, 205,000 (cotton, tobacco); Abadan, 150,000 (petroleum).

Monetary unit: Rial.

Languages: Iranian (Persian), Kurdish, Azerbaijani.

Religions: Moslem (Shiah), about 90%; Moslem (Sunni), about 5%; Armenian; Jewish; Nestorian; Parsi.

**HISTORY.** Oil-rich Iran, roughly one-fifth the size of the United States, was called Persia before 1935. Its key location blocks

the lower land gate to Asia, and also stands in the way of traditional Russian ambitions for access to the Indian Ocean. In modern times, Iran has drawn Big Power interest because of its rich oil deposits.

Iran's history is a long one of rising and falling dynasties. After periods of Assyrian, Median and Achaemenidian rule, Persia became a powerful empire under Cyrus the Great, reaching from the Indus to the Nile at its zenith in 525 B.C. It fell to Alexander in 331-30 B.C., to the Selucidae in 312-02 B.C., and to the Parthians about 130 B.C. A native Persian regime arose about A.D. 224, was weakened fighting the Turks, and fell to the Arabs in 637. In the 12th century the Mongols took their turn ruling Persia, and in the early 18th century the Turks and Russians occupied it. In modern times, Russia, Turkey, Britain, France, and, most recently, the United States, all have taken keen competitive interest in Iran.

An Anglo-Russian convention of 1907 divided Iran into two spheres of influence. British attempts to impose a protectorate over all of Iran were defeated in 1919. On Feb. 26, 1921, General Riza Pahlavi seized the government and was elected hereditary shah in 1925. Subsequently he did much to modernize the country, and abolished all foreign extraterritorial rights.

Increased pro-Axis activity led to Anglo-Russian occupation of Iran in August, 1941, and deposition of the shah in favor of his son, Mohammed Riza Pahlavi.

In November, 1945, a Soviet-inspired autonomist movement won control of Azerbaijan, Iran's northwest province. To protect their advantage, the Russians kept troops in that area past the treaty evacuation date of March 2, 1946. The Iranians promptly protested this breach of agreement to the United Nations. The Russians evacuated their troops on May 6 but not before they had forced Iran to promise them oil concessions in the north.

Elections held in Jan., 1947, were won by the Government party of Ghamas-Saltaneh, who resigned Dec. 28, 1947, following a sharp Soviet protest against rejection of the oil pact by parliament. Subsequent cabinets were weak and inefficient. Lt. Gen. Ali Razmara took office June 26, 1950, and pledged to restore efficient and honest government, but he was assassinated Mar. 7, 1951. Mohammed Mossadegh took over April 29. The next day, parliament completed action on a bill nationalizing the oil industry. The action was taken over strong British protests, but Britain evacuated the oil refineries Oct. 3, 1951. Subsequent British-Iranian negotiations failed. Loss of oil revenue placed Iran in a precarious economic position.

Mossadegh was ousted Aug. 19, 1953, in a *coup d'état* led by Fazollah Zahedi, whom the Shah had named premier.

\* U.N. estimate; no census ever taken.

**GOVERNMENT AND DEFENSE.** Iran is a constitutional monarchy, and the shah has the usual powers of the head of a parliamentary state. Executive power is exercised by a cabinet headed by the prime minister, who is appointed by the shah and is responsible to the Majlis (parliament), the lower house of which has 186 popularly-elected members.

In May, 1949, the constitution was amended to permit the shah to dissolve the Majlis; at the same time legislation was enacted to set up an upper house or Senate provided by the 1906 constitution but never established.

Military service is compulsory; the initial training period is 2 years. The army, modernized and reorganized by Riza Pahlavi, father of the present shah, consists of about 130,000 men. The air force has several hundred planes, and the navy several small craft in the Persian Gulf. There is also a U. S.-trained police force of 20,000.

**SOCIAL AND ECONOMIC CONDITIONS.** Education has made good progress in the last 30 years, supplanting the old and essentially religious system. In 1948 there were 3,229 elementary schools with 386,266 pupils, and 284 secondary schools with 36,353. There are universities at Teheran and Tabriz. Illiteracy is still high.

Iran is predominantly agricultural. Large estates are numerous, and irrigation is common, especially on the central plateau. The principal crops are wheat (est. 1952: 2,682,000 metric tons) and barley (1,048,000 tons). Rice production, confined largely to the Caspian provinces, was estimated at 360,000 tons (paddy) in 1952.

Other crops include grapes, dates, apricots, tobacco, tea, cotton, sugar beets and corn. There are extensive grazing lands. Wool production in 1950 was estimated at 16,000 metric tons (greasy); in 1951, there were an estimated 18,000,000 sheep.

Iran must still import many manufactured necessities, but several new factories were established by the government after 1925 including sugar plants, rice and oil mills, textile factories, a cement factory, copper smelter, glycerine factory and small arms factory. The Chalus silk mill produces 1,000,000 yards or more a year. Both sugar and tobacco are government monopolies. The manufacture of carpets, for which Iran is famous, is a valuable industry.

Foreign-trade data (trade years beginning March 21) are as follows, in billions of rials:

	1950-51	1951-52	1952-53
Exports	25.75	11.27	5.88
Imports	6.98	7.37	5.20

The chief exports in 1950-51 were petroleum and products (90%), rugs and carpets (2%) and fruits and berries (1%).

Leading customers were Britain (26%), India (8%) and South Africa and France (each 5%). Chief suppliers were Britain (29%), the U. S. (26%) and India (10%).

Motorable roads in 1949 totaled some 17,000 miles, about one-fifth asphalted. Railway mileage open to traffic was 1,748 (1949). The principal line (870 mi.) connects Bandar Shahpur on the Persian Gulf with Bandar Shah on the Caspian Sea. It carried 5,000,000 tons of supplies to Russia during World War II. Iranian State Airlines and other lines provide service.

The budget for 1951-52 forecast revenue of 9,552,846,499 rials and expenditure of 9,549,595,000 rials. The internal debt in Dec. 1951 was 7,360,000,000 rials.

Considerable mineral wealth exists, but only oil is exploited commercially. The principal field, near Shushar in the southwest, was worked until 1951 by the Anglo-Iranian Oil Company. The latter's concession began in 1901 and was to run until 1993, but its properties were nationalized by the Iranian government in April, 1951. Production in 1950 was 31,750,000 long tons (about 240,000,000 barrels). The refinery at Abadan processed 24,855,171 tons. Production under Iranian government control was only a small fraction of normal. Deposits of uranium have been reported.

The main forest belt on the northern Elburz slope supplies railroad ties, charcoal and firewood. Gums are the most valuable forest product. Fisheries are worked in the Persian Gulf and the Caspian Sea.

**TOPOGRAPHY AND CLIMATE.** Iran is, in general, a plateau averaging 4,000 feet elevation. In addition, there are maritime lowlands along the Persian Gulf and the Caspian Sea. The Elburz Mountains in the north rise to 18,603 feet at Mt. Damavend. From northwest to southeast, the country is crossed by a desert 800 miles long and 100 to 200 miles wide. Iran's only navigable river is the Karun in the southwest.

The central plateau is hot in summer and very cold in winter, but the Caspian area has a sub-tropical climate. Mean temperatures vary at Teheran from 35° in January to 85° in July (yearly average 62°); at Bushire, on the Persian Gulf, from 58° in January to 90° in July and August (average 75°). Rainfall is light.

## Iraq (Kingdom)

Area: 116,600 square miles.\*  
 Population (est. 1950): 5,100,000  
 (Arab, 75%; Kurdish, 15%; Iranian, 3.75%; others, 6.25%).  
 Density per square mile: 43.7.  
 Ruler: King Faisal II.  
 Prime Minister: Jamil Al-Madfal.  
 Principal cities (est. 1946): Baghdad, 832,927 (capital); Mosul, 279,361 (farming, oil); Basra, 181,814 (chief port).

Monetary unit: Dinar.

Languages: Arabic, Kurdish.

Religions: Moslem (Shiah), 53%; Moslem (Sunni), 35%; Christian, 2.8%; Jewish, 2.5%; others, 6.7%.

\* Excluding southern and western desert areas.

**HISTORY.** Iraq, a triangle of mountains, desert and fertile river valley less than half the size of Texas, is bounded east by Iran, north by Turkey, west by Syria and Jordan, and south by Saudi Arabia. From earliest times it has been known as Mesopotamia—the land between the rivers—for it embraces a large part of the alluvial plains of the Tigris and Euphrates.

An advanced civilization existed in Mesopotamia by 4000 B.C. Sometime after 2000 B.C. it became the center of the ancient Babylonian and Assyrian empires. It was conquered by Cyrus the Great of Persia in 538 B.C., and by Alexander in 331 B.C. After an Arab conquest in A.D. 637-40, Baghdad became capital of the ruling caliphate. The country was cruelly pillaged by the Mongols in 1258, and during the 16th, 17th and 18th centuries was the object of repeated Turkish-Persian competition.

Nominal Turkish suzerainty imposed in 1638 was replaced by direct Turkish rule in 1831. In World War I an Anglo-Indian force occupied most of the country, and Britain was given a mandate over the area in 1920. The British recognized Iraq as a kingdom in 1922 and terminated the mandate in 1932, when Iraq was admitted to the League of Nations. In World War II, Iraq generally adhered to its 1930 treaty of alliance with Britain, but in 1941 British troops were compelled to put down a pro-Axis revolt led by Prime Minister Rashid Ali. Iraq became a charter member of the Arab League in March, 1945 and Iraqi troops took part in the Arab invasion of Palestine in May, 1948.

King Faisal II, born on May 2, 1935, succeeded his father, Ghazi I, who was killed in an automobile accident on April 4, 1939. The king's uncle, Abdul-Ilah, is heir apparent.

**GOVERNMENT AND DEFENSE.** Under the 1924-25 constitution, Iraq is a hereditary monarchy with a two-house Parliament. The Senate is named by the king for a term of eight years; the 138-member Chamber of Deputies is elected popularly for four years. Executive power is vested in a Council of Ministers, headed by the prime minister, who is appointed by the king.

Military service is compulsory, with an initial training period of 1½ to 2 years. The British-trained police number about 21,000. The 1930 treaty gives Britain the provisional right to keep troops in Iraq.

**SOCIAL AND ECONOMIC CONDITIONS.** Primary education is free and nominally

compulsory. Secondary education is neither free nor compulsory. There are no universities. In 1949-50 there were 1,070 state elementary schools with 169,868 pupils, and 108 intermediate and secondary schools with 19,350 pupils. Fourteen colleges had a combined enrollment of 5,200 students.

The chief economic activity is agriculture, dependent upon irrigation and confined to the valleys of the Tigris and Euphrates. Iraq supplies about 80 per cent of the world's dates (1950: 417,000 metric tons). Chief among the cereal products of Iraq are barley (1952: 800,000 metric tons), wheat (480,000 tons), rice, sorghum, maize and millet. Many fruits and some tobacco and cotton are grown. Grazing is the principal occupation of the many nomadic and seminomadic tribes. Livestock estimates included (1951) 8,520,000 sheep, (1950) 1,062,000 cattle, (1949) 2,000,000 goats and 291,000 camels. Wool production in 1951 was 9,000 metric tons (clean basis).

Industry is still embryonic. Of approximately 100 manufacturing firms, the most important are those making brick, tile, woolen textiles, vegetable oils, soap, glass and cigarettes.

Recent foreign-trade data are as follows (in millions of dinars):

	1950	1951	1952
Exports	50.2*	66.3*	102.9*
Imports	37.6	51.0	61.8

\* Adjusted to include estimated value of crude petroleum exports.

Chief exports in 1952 were petroleum (81%), barley (9%) and dates (5%). Leading suppliers were Britain (38%), the U. S. (18%) and Italy (5%); leading customers (excluding petroleum) were Britain (36%), Japan (13%) and Saudi Arabia (8%).

The only port for seagoing vessels is that of Basra, located on the Shatt al-'Arab River near the head of the Persian Gulf. River vessels plying the Tigris between Basra and Baghdad have tonnage of more than 60,000. There are about 4,000 miles of improved and unimproved roads. Iraq State Railways, the only rail line, operates three lines totaling 1,555 miles. There is an airport and seaplane base at Basra.

Oil production is concentrated at the Baba Gurgur fields near Kirkuk, which are operated on behalf of an international group by the British-managed Iraq Petroleum Company (production 1952: 15,552,715 long tons). Associated companies operate fields at Zubair near Basra (1952: 2,238,177 tons) and at Ain Zalah (1952: 269,905 tons). Oil is piped to Tripoli in Lebanon, Baniyas in Syria, and Haifa in Israel. The Khanaqin Oil Company, an Anglo-Iranian subsidiary, operates another field which

produces only for local consumption (1952: 492,000 long tons).

The 1952-53 budget amounted to 38,400,000 dinars. The capital works budget, based on oil royalties, usually balances the ordinary budget. There is no external debt.

**TOPOGRAPHY AND CLIMATE.** Iraq has arid desertland west of the Euphrates, a broad central valley between the Euphrates and Tigris, and mountains in the northeast. The fertile lower valley is formed by the delta of the two rivers, which join about 120 miles from the head of the Persian Gulf. The gulf coast line is 26 miles.

Iraq's climate, generally, runs to great extremes—long hot summers and short cold winters. The area on the Persian Gulf is one of the hottest places in the world. Average temperature at Baghdad is 49° in January and 92° in July and August.

## Ireland (Republic)

Area: 26,601 square miles (not including larger water bodies).

Population (est. June 30, 1952): 2,948,000 (almost entirely Irish).

Density per square mile: 110.8.

President: Séan T. O'Kelly.

Prime Minister: Eamon de Valera.

Principal cities (census 1951\*): Dublin (Baile Atha Cliath), 521,322 (capital); Cork, 74,577 (seaport); Limerick (Luimneach), 50,823 (seaport); Dun Laoghaire (Kingstown), 47,963 (seaport).

Monetary unit: Irish pound.

Languages: Gaelic, English.

Religions (census 1946): Roman Catholic, 94.3%; Protestant Episcopal, 4.2%; Presbyterian, .8%; others, .7%.

\* Provisional figures.

**HISTORY.** The young Republic of Ireland—formerly Eire, and before that the Irish Free State—is an agrarian state that occupies five-sixths of the island of Ireland west of England, across the Irish Sea.

About the beginning of the Christian era, Ireland was divided into five kingdoms—Ulster, North Leinster, South Leinster, Munster and Connaught—each with its own ruler, but each subject to the overlord of all Ireland who dwelt at Tara. St. Patrick introduced Christianity in A.D. 432 and became the country's patron saint.

Norse depredations along the coasts, starting in 795, ended in 1014 with Norse defeat at the Battle of Clontarf by forces under Brian. In the middle of the 12th century, the Pope gave all Ireland to the English crown as a papal fief. In 1171 Henry II of England was acknowledged "Lord of Ireland," but native sectional rule continued for centuries, and English control over the whole island was not reasonably absolute until the 17th century. By the Act of Union (1800), England and

Ireland became the "United Kingdom of Great Britain and Ireland."

The great potato famine of 1846-48 took many lives and drove millions to emigrate to America.

Several home-rule bills were introduced in the English Parliament in the 19th century, but failed of passage. One was finally approved in 1914, but enforcement was suspended by the outbreak of World War I. During the war, agitation for freedom was carried on by the nationalist party—Sinn Féin (Ourselves). In 1916 the British quickly suppressed the famous Easter Week rebellion and executed its leaders.

After the 1918 elections, seventy-three of the Sinn Féiners elected to the English Parliament met in Dublin, proclaimed themselves an Irish Parliament, and passed a declaration of independence. The result was war between Irish nationalists and British troops from January, 1919, to May, 1921. A treaty ratified in December, 1921, gave Ireland political status equal to that of Canada. Six Ulster counties, largely Protestant, formed a separate government as Northern Ireland, closely bound to England; the other twenty-six became the Irish Free State. Republican extremists, headed by Eamon de Valera, refused for several years to recognize the treaty.

William Cosgrave, leader of the Sinn Féin's right wing, was president from 1922 to 1932. In the latter year, De Valera's party, Fianna Fáil, won control of the government. Under De Valera's leadership a new constitution was adopted in 1937 making the nation, in effect, a republic. The country's former name of "Eire" was restored by the constitution.

Dr. Douglas Hyde, elected without opposition as Eire's first president in 1938, was succeeded in 1945 by Séan T. O'Kelly, the Fianna Fáil nominee. The country maintained strict neutrality during World War II.

De Valera's long tenure as prime minister came to an end in Feb., 1948, when the Fianna Fáil lost its absolute majority in the parliamentary elections. John A. Costello, a Fine Gael moderate, took office at the head of a six-party coalition cabinet on Feb. 18, 1948, but De Valera returned to power on June 13, 1951, after new elections.

The nation severed its last ties with the British Crown at midnight April 17, 1949, and officially proclaimed itself the Republic of Ireland on the next day—Easter Monday.

**GOVERNMENT AND DEFENSE.** Ireland is a sovereign, independent republic. The president, directly elected for seven years, names the prime minister on the nomina-

tion of the Chamber of Deputies. Parliament (Oireachtas) has two houses. The Chamber of Deputies (Dáil Éireann) has 147 members elected by proportional representation for a five-year term. The Senate (Seanad Éireann) has 60 members, of whom 11 are named by the prime minister, 6 by the universities, and 43 from vocational panels; its powers are limited.

Party representation in the Dáil Éireann after the elections of May 30, 1951, was as follows: Fianna Fáil, 69; Fine Gael, 40; Labour, 16; Farmers, 6; Clann Na Poblachta, 2; independents, 14.

Military service is voluntary. The army has a permanent authorized strength of 12,500. In 1938 Britain gave up its last defense posts in Eire, including those at Cobh, Berehaven and Lough Swilly.

**SOCIAL AND ECONOMIC CONDITIONS.** Elementary education is free and is provided in state schools; secondary education is under private control, notably the religious orders. Technical and agricultural education is under local control, aided by state subsidies. The 4,896 elementary schools had 445,183 pupils in 1949-50; 416 secondary schools had 47,065 students. The University of Dublin (Trinity College), founded in 1591, had an enrollment of 2,442 in 1949-50, and the National University of Ireland (constituent colleges at Cork, Galway and Dublin) had 5,006.

The majority of the people are English-speaking, although the government has attempted to promote the traditional Gaelic language, which is an essential part of the curriculum for all state schools.

Ireland is predominantly an agricultural country, with about 70 per cent of the total land area (17,000,000 acres) devoted to crops and pasture. The pastoral industry is the basis of the nation's economy, but recent years have brought a greater diversity in agriculture, marked by large increases in sugar beet and wheat production. Principal crops in 1952 were wheat, 262,100 long tons; rye, 3,500 tons; oats, 577,500 tons; potatoes, 2,676,200 tons; sugar beets, 570,100 tons; and flax, 2,500 tons. Other staple crops are turnips, cabbage and hay. Livestock in June 1952 included 4,309,000 cattle, 2,856,800 sheep and 719,400 hogs. Wool output in 1951 was 4,000 metric tons (clean basis); butter output, 33,100 tons.

The government's self-sufficiency policy, plus financial and tariff inducements, have promoted considerable industrial development since 1928. The leading manufactures, in order of value, are ordinarily beverages, tobacco, wood, paper, clothing, textiles and metals. The hydroelectric plant erected on the Shannon River in County Limerick provides cheap electricity for homes and factories.

Trade statistics are as follows (in millions of Irish pounds):

	1950	1951	1952
Exports	72.4	81.5	101.5
Imports	159.4	204.6	172.2

The leading customer in 1952 was Great Britain (72%), followed by Northern Ireland (14%) and the U. S. (3%). Britain was also the chief supplier (49%), followed by the U. S. (11%) and Canada (6%). Major exports in 1952 were cattle and horses (31%), meat, fish and dairy products (27%) and textiles, ale and sweet fat (each 5%). Major imports were machinery, vehicles, textiles, wheat, coal, corn, and iron and steel and manufactures.

The merchant marine in 1948 had 448 vessels with a net tonnage of 46,161. Almost all transport facilities are nationalized. Railway mileage is about 2,500. Main roads in 1950 totaled 49,200. Shannon is rapidly developing into a key international airport. There are 670 miles of canals and navigable waterways.

Recent finance data are as follows (in millions of Irish pounds):

	1951-52	1952-53	1953-54*
Revenue	83.9	95.9	101.2
Expenditure	90.6	98.0	101.1

\* Budget estimate.

The public debt on March 31, 1953, was £243,798,000; assets were £149,111,000.

In 1951, Ireland mined 184,800 metric tons of coal, some gypsum, and considerable peat from its bogs, but otherwise the mineral resources are negligible, as are those of the forests. The fishing industry employs about 10,000 men. The 1952 catch, including mackerel, herring, whiting, cod, plaice and shellfish, was valued at £552,015.

**TOPOGRAPHY AND CLIMATE.** Occupying the entire island except for the six northern counties of Ulster, Ireland resembles a basin—a central plain rimmed with mountains, except in the Dublin region. The mountains are low, with the highest peak, Carruntuohill in Kerry County, rising 3,415 feet. The principal river is the Shannon, which begins in the north central area, flows south and southwest for about 240 miles and empties into the Atlantic. About 20 per cent of the country is covered by bogs. Among the many lakes are the famous Lakes of Killarney in the southwest county of Kerry.

A moist and mild climate, with annual rainfall running between thirty and forty inches fairly evenly distributed throughout the year, is influenced by the Gulf Stream, which makes the winters warmer than in other places in the same latitude. The mean temperature at Dublin is 41.7° in January and 60.5° in July.

## Israel (Republic)

Area: 8,084 square miles.

Population (est. Dec. 31, 1952): 1,629,407 (90% Jewish).

Density per square mile: 201.6.

President: Itzhak Ben-Zvi.

Premier: David Ben-Gurion.

Principal cities (est. Dec. 1952): Jaffa-Tel Aviv, 350,000 (industrial center); Haifa, 150,200 (chief port); Jerusalem (Israeli), 139,000 (capital).

Monetary unit: Israeli pound (£I).

**HISTORY.** The history of Palestine, cradle of two of the great religions of the world, and homeland of the modern state of Israel, is mostly a chronicle of invasion, conquest and confusing divisions. To the ancient Hebrews it was known as the "Land of Canaan"; the name Palestine is derived from that part of the country inhabited by the Philistines of Biblical times. About 1000 B.C. the Hebrews succeeded in establishing a single monarchy, which later split up into two kingdoms—Judah and Israel. The country was subsequently invaded and overcome by many peoples, including the Assyrians, Babylonians, Egyptians, Persians, Macedonians, Romans and Byzantines. In A.D. 634–36, Palestine was wrested from the Byzantine Empire by the Arabs. Frankish Crusaders captured Jerusalem in 1099 and set up a feudal kingdom which endured until the defeat of the Franks by Saladin (1187) and the restoration of Moslem rule. In 1516 suzerainty over the area was transferred from the Mamelukes of Egypt to the Turks. It remained part of the Ottoman Empire until World War I, when British forces under General Allenby defeated the Turks and captured Jerusalem (Dec. 9, 1917). The League of Nations mandate awarded to Great Britain was put in force on Sept. 29, 1923.

Meanwhile, a movement had been founded in 1897 by Theodor Herzl to create a Jewish homeland in Palestine, and a considerable number of Jewish immigrants had entered the country prior to World War I. On Nov. 2, 1917, official British recognition was given both to the growing Arab nationalist movement and to the Zionist aspirations by the issuance of the so-called Balfour Declaration.

The declaration was attacked by the Arabs. Throughout the period between the two World Wars, outbreaks of violence and open revolt occurred. Jewish immigration continued, especially after the rise of Hitler. A British royal commission report approved by the British Government July 7, 1937, recommended the partition of Palestine into an Arab and a Jewish state separated by a mandated area in the vicinity of Jerusalem and at Nazareth. The Arabs opposed the proposal, advocating instead the establishment of an independent

Palestine with full minority rights for the Jews. In May, 1939, the British Government issued a White Paper declaring the establishment of a Jewish state contrary to British obligations to the Arabs and promising, after a transitory period of ten years, the establishment of an independent Palestine in which Arabs and Jews would share authority in government. During the next five years, 75,000 Jews were to be allowed to enter Palestine. These proposals did not satisfy either party, and the League Mandates Commission questioned their validity, but the outbreak of World War II overshadowed all other issues.

Arab-Jewish co-operation in the war effort introduced a period of order, but the end of European hostilities in 1945 brought a renewal of friction and the formation of the Arab League in that year served to demarcate lines of opposition. By 1946, there were many acts of terrorism by the Irgun Zvai Leumi, an illegal army, and the Stern Gang, both of which groups were repudiated by the Jewish Agency for Palestine.

Attempts to bring Jewish immigrants into Palestine illegally were intensified thereafter, and terrorism grew apace. Meanwhile, on Feb. 14, 1947, the Attlee government referred the whole problem to the United Nations for advice. The majority report of a special U. N. investigating committee recommended to the General Assembly in Sept., 1947, that Palestine be partitioned into Arab and Jewish states which would be independent politically but united economically. Jerusalem would be under international trusteeship. The minority recommended a federal unitary state similar to that proposed by Great Britain in Feb., 1947 and rejected by both sides.

Acceptance of the majority report by the U. N. General Assembly on Nov. 29, 1947 touched off new outbreaks of violence which British troops had difficulty in controlling. The decision was generally accepted by the Jews, but members of the Arab League announced their determination to resist partition by force, if necessary.

The Security Council voted on April 2, 1948, to call a special session of the General Assembly to reconsider the partition plan and possibly to put Palestine under temporary U. N. trusteeship. Instead, the Assembly, without disturbing the partition plan, voted on May 14 to send a U. N. mediator to Palestine to attempt to secure peace. Count Folke Bernadotte of Sweden was unanimously chosen mediator, May 20, 1948.

Termination of the British mandate on May 14 and withdrawal of British forces

brought new violence. An independent state of Israel was immediately proclaimed by the Jewish National Council, and Arab forces converged on Palestine from the south, north and east, spearheaded by the crack British-trained Arab Legion of King Abdullah of Jordan. Within a few hours Arab-Jewish hostilities were in full swing. On June 1, however, both sides accepted a Security Council request for a four-week truce which went into effect on June 11. Count Bernadotte's efforts to effect a compromise were unsuccessful, and on July 9 hostilities were resumed. On July 15 the Council voted to invoke for the first time Article 39 of the U. N. Charter; it declared the situation a menace to world peace and effected an indefinite truce by threatening to employ sanctions or military force to end the conflict. By July 21 all fighting had again ceased and Count Bernadotte resumed his efforts to bring about a lasting compromise. He was assassinated on Sept. 17 within the Israeli-held area of Jerusalem by Jewish dissidents, and his duties were taken over by Dr. Ralph Bunche.

Fighting broke out again in October, 1948, on the southern front, in the course of which Israeli forces made important gains against Egyptian positions in the Negeb and even penetrated a short distance into Egypt before the final cease-fire took effect on Jan. 7, 1949.

On Feb. 24, 1949, Israel and Egypt concluded an armistice agreement, the general effect of which was to freeze Israeli and Egyptian positions, with some exceptions, without prejudice to a final political settlement. Israel and Jordan concluded a similar pact on April 3 in respect to central and eastern Palestine and Jerusalem.

In April, 1950, Arab-held eastern and central Palestine, including the Old City of Jerusalem, was incorporated into Jordan by action of the Jordanian parliament.

The partition plan adopted by the U. N. in Nov., 1947, had awarded three distinct parts of Palestine to the Jews. The northernmost, situated immediately west of the River Jordan and around the shores of the Sea of Tiberias, has Safad and Tiberias as its most important towns, and includes the greater part of the valley of Jezreel. The western and economically most important region lies along the Mediterranean from Haifa and the Plain of Esdraelon in the north to the Rehoboth area in the south and includes the coastal plain of Sharon—the center of Palestine's citrus industry—the port of Haifa, one of the best in the Near East, and the city of Tel Aviv, a growing industrial center. The third region consists of the greater part of the Negeb, the southern desert area with an

outlet to the Red Sea at the head of the Gulf of Aqaba.

In addition, Israel holds western Galilee, awarded to the Arabs under the partition plan, and a broad corridor from Tel Aviv to Jerusalem through central Palestine, all of which had been awarded to the Arabs, as well as part of modern Jerusalem, which under the partition plan was to be placed under U. N. trusteeship.

**GOVERNMENT.** The declaration of independence, issued May 14, 1948, by the Jewish National Council (Vaad Leumi), stated that the new nation would be "based on the precepts of liberty, justice and peace taught by the Hebrew prophets." On Feb. 14, 1949, the Constituent Assembly adopted a constitution setting up a republican form of government headed by a president elected for a 5-year term by the Chamber of Deputies. Legislative power is vested in the Chamber of Deputies, the members of which are elected by the vote of all citizens who have reached the age of 21. The government is administered by the cabinet, which is headed by the premier and is collectively responsible to the Chamber of Deputies.

Elections held July 30, 1951, divided the 120 seats in the Chamber of Deputies (Knesset) as follows: Mapai (Labor), 46; General Zionist (rightist), 20; parties associated with Mapai, 17; Mapam (United Workers), 15; Communists, 5; and others, 17.

The constitution characterizes Israel as the national home of the Jewish people and directs the admission of every Jew who desires to settle within its borders, subject to control of the Chamber of Deputies. Between May, 1948, and Aug. 31, 1952, 707,500 Jewish immigrants entered Israel.

The army numbered about 75,000 in 1951.

**SOCIAL AND ECONOMIC CONDITIONS.** Education is under the supervision of the Ministry of Education. Kindergarten and elementary education is free; most secondary schools are semiprivate. In 1951-52 there were 825 elementary schools with 178,174 pupils, 68 secondary schools with 12,751 students and 192 Arab schools with 27,151 students. The Hebrew university in Jerusalem had 3,000 students in 1952-53.

Agriculture is the chief economic activity. The maritime plain, the plain of Esdraelon and the northern Jordan valley are the principal agricultural areas. Citrus growing, confined largely to the maritime plain, normally furnishes the major export crop. Production (1951-52) was 349,550 metric tons. Others include olives, rice, fruits and vegetables, figs, tobacco, wheat, barley, corn, sesame and potatoes. There

are many collective and co-operative rural settlements.

Industry is developing rapidly, especially the food-processing, textile, metalworking and chemical groups. Diamond cutting, although dependent on rough diamond imports, is of major importance; and there are oil refineries and storage tanks at Haifa, a terminus of the pipeline from the Iraqi oil fields.

Recent foreign-trade statistics are as follows (in millions of Israeli pounds):

	1949	1950	1951
Exports	10.6	13.2	16.7
Imports	87.7	102.6	122.6

Chief exports in 1951 were citrus fruits and concentrates (34%), polished diamonds (25%) and woolen manufactures (7%). Leading customers were Britain (31%) and the U. S. (22%); leading suppliers, the U. S. (32%) and Britain (10%). Leading imports were crude oil (7%) and wheat (4%).

Mineral resources are limited. They include gypsum, sulfur, limestone, and rock salt, together with potash and bromine from the Dead Sea. There are few forest areas, and wood is a major import.

Internal communication is provided by 211 miles of railway (in operation, 1952) and a good highway network totaling 1,612 miles (1953). The excellent airport at Lydda, near Tel Aviv, is served by major international lines and El Al, Israel's international line. The merchant marine had 30 vessels (100 tons and over), aggregating 107,487 gross tons, on June 1, 1952.

Israel has been heavily dependent on international loans. The budget for 1952-53 balanced at £1 283,400,000, including £1 115,000,000 for development and £1 45,000,000 for defense.

**TOPOGRAPHY AND CLIMATE.** Northern Israel is largely a plateau traversed from north to south by mountains and broken by great depressions, also running from north to south. The maritime plain is remarkably fertile, but the southern Negeb region, which comprises almost half the total area, is largely a wide desert steppe area. The Jordan, the only important river, rises in Syria and flows along the Jordan border through the Hule marshes and lake and the Sea of Tiberias (Galilee) into Jordani Palestine and thence into the Dead Sea, which is 1,290 feet below sea level.

Summers are hot and dry, with occasional maximum temperature of 100°. The mean annual temperature at Jerusalem is 62.8°. Rainfall occurs chiefly in the autumn and spring; the mean annual average is 28 inches along the coast and 26 inches in Jerusalem.

## Italy (Republic)

### (Repubblica Italiana)

Area: 116,235 square miles.

Population (census 1951): 47,020,536 (predominantly Italian).

Density per square mile: 404.5.

President: Luigi Einaudi.

Premier: Giuseppe Pella.

Principal cities (census 1951): Rome, 1,606,739 (capital); Milan, 1,264,402 (leading financial, industrial center); Naples, 1,003,815 (seaport); Turin, 711,492 (auto works); Genoa, 678,200 (seaport); Palermo, 482,594 (Sicilian seaport).

Monetary unit: Lira.

Religions: Roman Catholic, 99.6%; others (Protestant, Orthodox, Jewish), .4%.

**HISTORY.** Modern Italy did not exist as a unified country until 1870. Until A.D. 476, when the German Odoacer became head of the Roman Empire in the west, the history of Italy was largely the history of Rome. From A.D. 800 on, the Holy Roman Emperors, the Popes, Normans, Lombards and Saracens all vied for control over various segments of the Italian peninsula. Numerous city states, such as Venice and Genoa, and many small principalities flourished in the late Middle Ages.

In 1713, after the War of the Spanish Succession, Milan, Naples and Sardinia were handed over to Austria, but the Hapsburg influence on the peninsula was interrupted for a short time after 1800 when Italy was unified by Napoleon, who crowned himself King of Italy on May 26, 1805. After the Congress of Vienna in 1815, Austria continued to be the dominant power in Italy.

The movement for national unity began in the middle 19th century, staged by the "Young Italy" group headed by Giuseppe Mazzini. In 1858 Count Cavour, prime minister under King Victor Emmanuel II of Sardinia, secured the aid of Napoleon III of France in unifying Italy. After French and Sardinian forces had defeated the Austrians in 1859, Lombardy was annexed to Sardinia, and by the time the first Italian parliament opened at Turin in Feb., 1861, all Italy was represented except Venetia, held by Austria, and Rome, which was the territory of the Pope. On February 18, 1861, Victor Emmanuel II was proclaimed King of united Italy.

In 1866 Italy sided with Prussia against Austria and received Venetia; Rome was seized in 1870. In 1882 the young nation entered into the Triple Alliance with Austria and Germany. After war with Turkey in 1911-12, the Italians were awarded Tripoli in North Africa and the Dodecanese islands in the Aegean Sea.

Italy denounced the Triple Alliance on May 3, 1915, and declared war on Austria on May 24. By the treaty of St. Germain, on Sept. 10, 1919, the south Tirol (Upper

Adige) and the Istrian peninsula were awarded to Italy.

In the years immediately following World War I, Italy was a virtual battleground between the Socialists and Benito Mussolini's new Fascist movement. The weak government was powerless to maintain order as the two sides fought for power. Finally, on Oct. 30, 1922, the Fascists staged their "March on Rome" and took over the government. Mussolini was named premier by King Victor Emmanuel III. Il Duce and his Fascist Grand Council soon made Italy into a corporate state, with himself as dictator.

In 1935-36 Italy successfully invaded, conquered and annexed Ethiopia, despite the complaints of the League of Nations and economic sanctions.

On November 6, 1937, Italy joined the German-Japanese anti-Comintern pact and on December 11 withdrew from the League of Nations. The Rome-Berlin Axis was converted into a full military alliance on May 22, 1939. Meanwhile, Italian troops had seized Albania in April, 1939.

**WORLD WAR II.** On June 10, 1940, Mussolini announced a declaration of war against France (already in the throes of defeat) and Britain. Italian troops were able to advance only a few miles into France before the Armistice was concluded on June 24, under which Italy annexed a small strip of France. On October 28, 1940, Italian forces invaded Greece from Albania, but were driven back by the Greeks, who held a third of Albania by the time the Germans launched their Balkan campaign on April 6, 1941. Italy subsequently occupied parts of Yugoslavia and Greece. Following the German capitulation in North Africa and the fall of Sicily, Mussolini was ousted on July 25, 1943, and Marshal Pietro Badoglio formed a new government. On September 3, 1943, the date of the invasion of the Italian mainland by Allied forces, a military armistice was signed between General Eisenhower and Badoglio, and the legislative and administrative activities of the government were made subject to the approval of an Allied Commission.

On June 9, 1944, five days after the Allies entered Rome, Badoglio was succeeded as premier by Ivanoe Bonomi, a Socialist, who formed a coalition cabinet. The government was recognized by the Allies as the *de facto* government of Italy on October 25, but only as a cobelligerent, not as an ally. Later it was given full legislative powers and the right to resume diplomatic relations.

Upon the collapse of German resistance in the north, Mussolini was tracked down and put to death by partisan forces on April 28, 1945. On December 10, Alcide de Gasperi, a Christian Democrat, took over

from Ferruccio Parri, who had succeeded Bonomi as premier in June.

On June 2, 1946, the Italian people voted in favor of a republic, and King Humbert II, who had succeeded his father on May 9, went into exile. De Gasperi remained at the helm, first with a coalition cabinet and later (during the month of June, 1947) with a Christian Democrat-Independent government.

The new constitution drafted by the constituent assembly took effect on Jan. 1, 1948. Following the Communist defeat in the elections of April, 1948, De Gasperi formed another coalition cabinet from which the Communist and left-wing Socialist bloc was again excluded. Luigi Einaudi, veteran Liberal leader, was elected first president of the Republic on May 11. In April 1949, Italy adhered to the North Atlantic pact.

De Gasperi's centrist coalition lost ground to both leftist and rightist groups in parliamentary elections held June 7-8, 1953. He gave way to Giuseppe Pella, who formed an all-Christian Democrat cabinet.

**GOVERNMENT.** Under the 1947 constitution Italy is a "democratic Republic founded on labor." The president is elected for seven years by parliament in joint session with regional delegates. The cabinet, headed by the premier and nominated by the president, must enjoy the confidence of parliament, which is composed of the Chamber of Deputies, popularly elected for a five-year term, and the Senate. All citizens are duty-bound to vote.

Articles 115-133 of the constitution introduced a new concept of regional autonomy, dividing the country into 19 regions with locally-elected governments which control regional affairs. Five regions, including the islands of Sicily and Sardinia, enjoy a special degree of autonomy. Below the regions in the governmental organization are the provinces and communes.

The Chamber of Deputies elected on June 7-8, 1953, had 590 members, of whom 261 were Christian Democrat, 143 Communist, 75 leftwing Socialist, 40 monarchist, 29 Social Movement (neo-Fascist) and 42 members of other parties. The Senate had 237 members.

**PEACE TREATY OF 1947.** The peace treaty which took effect Sept. 15, 1947, required Italian renunciation of all claims in Ethiopia and Greece, the cession of the Dodecanese to Greece, and of five small Alpine areas to France. In addition, the major part of the Istrian peninsula, including Fiume and Pola, went to Yugoslavia. The Free Territory of Trieste was carved out of the area to the west of the new Yugoslav frontier.

Italy was to pay reparations of \$100,000,000 in kind over a seven-year period to

the Soviet Union, \$125,000,000 to Yugoslavia, \$105,000,000 to Greece, \$25,000,000 to Ethiopia and \$5,000,000 to Albania; also to make two-thirds restitution for war-time damage to Allied property in Italy. DEFENSE. The 1947 treaty required Italy to reduce the strength of her army to 250,000 men (including *carabinieri*), the navy to 25,000 (including naval air arm) and the air force to 25,000 (with 350 planes). The fleet was reduced to 2 battleships, 4 cruisers, 20 destroyers and large torpedo boats, plus smaller craft. Major war vessels placed at the disposal of the Big Four included 3 battleships, 5 cruisers, 8 submarines and 13 destroyers and large torpedo boats.

EDUCATION. Elementary education is free and compulsory from 6 to 14. Elementary schools numbered 39,188 in 1949-50, with 4,815,239 pupils. The 3,420 government secondary schools had 786,196. In 1948-49, 27 universities and institutions of higher learning had 167,978 students. The University of Rome (founded 1303) had 25,622 students; Naples (founded 1224), 24,504; and Milan, 17,571.

RELIGION. Although the country is predominantly Roman Catholic, religious freedom is permitted. Catholic religious teaching is given in all elementary and intermediate schools. Relations with the Church are regulated by the treaty with the Holy See of Feb. 11, 1929, which established the temporal power of the Pope over Vatican City.

AGRICULTURE. Agriculture, the most important branch of Italy's economy, engages more than a third of the population. It is extremely diversified; differences of altitude, soil and climate allow the production of all European crops from rye to rice, from apples to oranges, and from hemp to cotton. Approximately 41,275,000 acres are cultivated. Italy ranks next to France in wine production (average 1931-42: 1,024,000,000 U. S. gal.; 1952: 1,004,000,000 gal.) and next to Spain in olive oil production. The Italian climate and soil are well suited to fruit growing.

Before World War II the Fascist government carried on a wide land reclamation program, mostly in Emilia, Apulia, and the Venetian provinces.

Crop data (in millions of metric tons):

	1950	1951	1952*
Wheat	7,773	6,904	7,792
Rye	131	122	127
Barley	294	270	265
Oats	558	509	508
Sugar beets	4,360	5,844	5,650
Olive oil	171	320	....

\* Provisional.

Livestock and dairy farming are important in Italy. Of the 50-odd varieties of Italian cheese, the best known are the

hard parmesan and pecorino (the latter made from ewe's milk) and the soft *bel paese* and *gorgonzola*. Cheese production in 1950 totaled 261,000 metric tons. In 1951, Italy had 8,325,000 cattle, 10,386,000 sheep and 4,052,000 hogs. Wool production (1950) totaled 16,000 metric tons.

INDUSTRY. Prior to World War II, there were approximately 730,000 industrial establishments in Italy, of which more than 1,000 employed at least 250 workers each. In 1948, approximately 3,250,000 workers were employed in industry. While a large proportion of small and medium sized concerns were common in industry before World War II, there was a growing tendency, fostered by the nature of the corporate state, toward industrial concentration. The textile industry, largest and most important, ordinarily supplied most of the home markets and left a large margin for export. It made rapid recovery after World War II, accounting for nearly half of the nation's exports. The metal industries are handicapped by lack of coal and of sufficient iron ore reserves. The chemical, clothing and food industries are also important. Industrial production is centered in the north.

Production of steel ingots and castings in 1952 was 3,528,000 metric tons; that of pig iron and ferroalloys, 1,203,600 tons.

Italy's full participation in the European Recovery Program has had a stimulating effect on the nation's war-shattered economy and has relieved at least partially the food deficits resulting from over-population.

TRADE. Statistics of Italy's foreign trade, in billions of lire, are as follows:

	1950	1951	1952
Exports	752.9	1,029.4	864.2
Imports	928.6	1,356.9	1,446.5

Italy's leading customers by value in 1951 were Britain (13%), France (9%), Germany (8%), the U. S. (7%) and Switzerland (6%). Principal suppliers were the U. S. (21%), Germany (7%), Australia (6%) and Argentina and France (each 5%). Chief exports were machinery and vehicles (16%), cotton products (14%) and synthetic fibers (12%). Leading imports included cotton, coal and coke, wool, grain and petroleum and products.

NATURAL RESOURCES. Italy is ordinarily the world's largest producer of mercury; it is also an important producer of sulfur. In 1951, 1,856 metric tons of mercury and 223,000 tons of sulfur were produced. The nation lacks, however, the staple minerals of coal, oil and iron, and is forced to import them. Production of coal and lignite in 1952 was 1,930,000 metric tons; 7,657,723 tons of coal were imported in 1950. Building stone, particularly marble, is plentiful. In the south Tirol and the cen-

tral Apennines, Italy has abundant water power. In 1952, the total power generated was 29,000,000,000 kwh, mostly by hydro-electric plants.

Less than 20 per cent of Italy's area is forested. Principal products are soft and hard timber, charcoal and cork. The fishing industry does not fill domestic needs. Coral and sponges are marketed.

**COMMUNICATIONS.** According to *Lloyd's Register*, the merchant marine totaled 1,101 steam and motor ships (100 tons and over), aggregating 3,289,215 gross tons, on June 30, 1952. On April 1, 1953, 50 vessels of 354,980 gross tons were under construction in Italian yards.

There are more than 150 seaports, of which the principal are Genoa, Venice, Savona, Naples and Leghorn. Coastwise traffic is particularly important because of difficult land communications. Railways open to traffic in 1950 totaled 13,449 miles. Highways totaled about 108,000 miles.

**FINANCE.** Data (in billions of lire):

	1949-50	1950-51	1951-52*
Revenue	1,134.0	1,282.6	1,455.0
Expenditure	1,558.9	1,764.3	1,824.0

\* Budget estimate.

The total internal debt was 3,189,424,-000,000 lire on Feb. 28, 1953.

**TOPOGRAPHY.** Approximately 600 of boot-shaped Italy's 708 miles of length are in the long peninsula that projects into the Mediterranean from the fertile basin of the Po River. The Apennines, branching off from the Alps between Nice and Genoa, form the peninsula's backbone, and rise to a maximum height of 9,560 feet at the Gran Sasso d'Italia (Corno). The Alps are Italy's northern boundary.

Several islands form part of Italy. Sicily, 9,926 square miles, lies off the toe of the boot, across the Strait of Messina, with a steep and rock-bound northern coast and gentler slopes to the sea in the west and south. Mt. Etna, an active volcano, rises to 10,741 feet, and most of Sicily is more than 500 feet in elevation. Sixty-two miles southwest of Sicily lies Pantelleria, 45 square miles, and south of that are Lampedusa and Linosa. Sardinia, 9,301 square miles, just south of Corsica and about 125 miles west of the nearest Italian mainland, is largely mountainous, stony and unproductive.

Italy has many northern lakes, lying below the snow-covered peaks of the Alps. The largest are Garda (143 sq. mi.), Maggiore (83 sq. mi.) and Como (55 sq. mi.). The Po, the principal river, rises in the Alps on Italy's western border and flows across the Lombard plain into the Adriatic. The Arno and Tiber Rivers, rising in the Apennines, flow generally westward.

Elsewhere are hundreds of short streams.

**CLIMATE.** Italy's climate is variable. The Italian Riviera along the Gulf of Genoa is subtropical and highly favored by tourists. The winters in the high Apennines are cold and bitter. The western slope of peninsular Italy is warmer than the eastern side, and the Po basin in the north has cold winters and very hot summers. Sicily has a warm and equable climate. In Rome, December through February are the coldest months (average 47°), July and August the warmest (75°), with abundant sunshine.

#### FORMER ITALIAN COLONIAL EMPIRE

Under the 1947 treaty, Italy ceded the Dodecanese to Greece and renounced title to her African possessions, which consisted of Libya, Eritrea and Italian Somaliland. Somaliland, however, remained under Italian administration as a U. N. trust territory.

**ITALIAN SOMALILAND**—Status: U. N. trust territory under Italian administration.

Area: 198,000 sq. mi.

Population (est. 1951): 1,247,000.

Administrator: Giovanni Fornari.

Capital: Mogadiscio (population: 74,-000).

Foreign trade (1949): exports, £883,748; imports, £1,113,400.

Agricultural products: dressed skins, cattle, sugar, cotton, cottonseed oil, fruits, bananas.

Forest products: gum, resin, kapok.

Mineral: tin.

Italian Somaliland, extending along Africa's east coast from the Gulf of Aden south to Kenya, fell within the Italian sphere of influence by treaties with the Somali sultans in 1889 and by agreements with Britain in 1905 and 1924, with the sultan of Zanzibar in 1905, and with Ethiopia in 1907. After the conquest of Ethiopia in 1936, the area was incorporated into Italian East Africa. It was occupied in Feb., 1941, by British Imperial troops and, reduced to its pre-1936 area, was placed under British military administration.

Administration was turned over to Italy on Apr. 1, 1950, pursuant to a decision of the U. N. General Assembly on Nov. 21, 1949, under which the area is a U. N. trust territory. Administration is in the hands of Italy for a period of 10 years during which it is to be prepared for independence.

The overwhelming majority of the population are Somalis who belong to the Sunni sect of Islam; they are a pastoral, nomadic people whose livelihood depends on cattle, sheep and camels. However, the Italians (numbering 4,500 in 1950) established plantations in the south, especially in the fertile Juba region. The colony was far from self-supporting, requiring heavy Italian subsidy. The climate is torrid.

## Japan (Empire) (Nippon)

Area: 146,690 square miles.

Population (est. 1952): 85,500,000.

Density per square mile: 582.9.

Ruler: Emperor Hirohito.

Premier: Shigeru Yoshida.

Principal cities (census 1950): Tokyo, 5,385,071 (capital; financial, manufacturing center); Osaka, 1,956,136 (chief industrial center); Kyoto, 1,101,854 (manufacturing); Nagoya, 1,030,635 (machinery, textiles); Yokohama, 951,189 (seaport); Kobe, 765,435 (seaport, shipbuilding); Fukuoka, 392,649 (seaport, textiles); Sendai, 341,685 (manufacturing, educational center).

Monetary unit: Yen.

Language: Japanese.

Religions (1938): Buddhism, 60%; Shin-tomism, 21%; Protestant (215,166); Roman Catholic (118,856).

**HISTORY.** Japan's early history is inseparable from mythology. A series of legends attributes the creation of Japan to the sun goddess, from whom the later emperors were allegedly descended. The first of them was Jimmu Tennō, supposed to have ascended the throne on Feb. 11, 660 B.C.

Recorded Japanese history begins with the first contact with China in the 5th century A.D. Japan was then divided into strong feudal states, all nominally under the emperor, but with real power often held by a court minister or clan. In 1185 Yoritomo, chief of the Minamoto clan, was designated shogun (generalissimo) with the actual administration of the islands under his control. Clans came and went, but a dual government system—shogun and emperor—persisted till 1867.

First contact with the West came about 1542, when a Portuguese ship off course arrived in Japanese waters. Portuguese traders, Jesuit missionaries, and Spanish, Dutch and English traders followed. Suspicious of Christianity and Portuguese support of a local Japanese revolt, the shoguns restricted all foreigners in 1636-38 except the Dutch, who were confined to Nagasaki. Western attempts to renew trading relations failed until 1853, when Commodore Matthew Perry sailed an American fleet into Tokyo Bay with a letter from President Fillmore. A U. S. commercial treaty signed in 1859 was followed by similar pacts with Britain, France, the Netherlands and Russia, and the opening to foreign residents of the ports of Yokohama, Nagasaki and Hakodate.

Japan now quickly made the transition from a medieval to a modern power. Feudalism was abolished and industrialization was speeded. An imperial army was established with conscription. The shogun system was abolished in 1867 by Emperor Meiji, and parliamentary government was established in 1889. After a brief war with China in 1894-95, Japan acquired Formosa

(Taiwan), the Pescadores islands, and part of southern Manchuria. China also recognized the independence of Korea (Chosen), which Japan later annexed (1910).

In 1904-05 the new Japan won prestige by defeating Russia in the Russo-Japanese War, gaining the territory of southern Sakhalin (Karafuto) and Russia's port and rail rights in Manchuria. In World War I Japan, which took a negligible part in military operations, seized Germany's Pacific islands and leased areas in China. The Treaty of Versailles then awarded her a mandate over the islands.

At the Washington Conference of 1921-22, Japan agreed to respect Chinese national integrity. The series of Japanese aggressions which was to lead to the nation's downfall began in 1931 with the invasion of Manchuria. The following year, Japan set up this area as a puppet state, "Manchukuo," under Emperor Henry Pu-Yi, last of China's Manchu dynasty. On Nov. 25, 1936, Japan joined the Axis by signing the anti-Comintern pact. The invasion of China came the next year, and the Pearl Harbor attack was unleashed on Dec. 7, 1941.

For many months after Pearl Harbor, the Japanese Army and Navy enjoyed spectacular success, but by the end of 1942 the tide had begun to turn. Three years later the dropping of the world's first atomic bomb in combat on Hiroshima, followed by a second one on Nagasaki, knocked Japan swiftly into a surrender that already had become inevitable.

The formal surrender took place Sept. 2, 1945, aboard the battleship *Missouri* in Tokyo Bay. Southern Sakhalin and the Kurile Islands reverted to Russia, and Formosa (Taiwan) and Manchuria to China. The Pacific Islands remained under U. S. occupation.

General of the Army Douglas MacArthur was appointed Supreme Commander for the Allied Powers (SCAP) Aug. 14, 1945. An 11-power (later 13-power) Far Eastern Commission was created to lay down occupation policies, while the 4-power Allied council advised and consulted with SCAP in carrying them out.

Soon after the surrender Japan began the process of democratizing its political, social and economic structure under Allied eyes. In 1946, MacArthur ordered Shidehara's cabinet to carry out a series of political purges. Elections held on April 10, 1946 brought 72.1% of the electorate to the polls, and resulted in a conservative victory. A Liberal, Shigeru Yoshida, took over the premiership on May 22.

Following the Socialists' victory in the elections of April 20, 1947, Japan's first Socialist premier, Tetsu Katayama, a lifelong Christian, formed a cabinet composed

of Socialists, Democrats and members of the People's Cooperative party on May 31, 1947. Dissension between the left and right wings of his party forced Katayama's resignation on Feb. 10, 1948. He was succeeded by Hitoshi Ashida, a Democrat leader, on Feb. 21. Ashida yielded to Shigeru Yoshida on Oct. 14, 1948. The latter was renamed premier Feb. 11, 1949, after his Liberal party won an absolute majority in the January, 1949, elections.

Pres. Truman removed Gen. MacArthur from his post as Supreme Commander for the Allied Powers on April 11, 1951, and named Gen. Matthew B. Ridgway in his place.

On Sept. 8, 1951, a treaty of peace with Japan was signed at San Francisco by the U. S. and 47 other nations. The U.S.S.R., Czechoslovakia and Poland were present at the conference but did not sign the treaty, which became effective April 28, 1952.

The treaty did not place any restrictions on Japan's political institutions, economy or armed forces. Japan was limited in territory to its 4 home islands, although the treaty did not recognize Soviet seizure of the Kurile Islands and South Sakhalin.

Conservative forces won an overwhelming victory in parliamentary elections held Oct. 1, 1952, and Yoshida was re-elected premier. A no-confidence vote forced new elections on Apr. 19, 1953, in which Yoshida's group lost ground, although he was re-elected premier.

**RULER.** Emperor Hirohito, born April 29, 1901, succeeded his father, Yoshihito, on Dec. 25, 1926. He was married on Jan. 26, 1924, to Princess Nagako, born in 1903. To them were born two sons, Crown Prince Akihito (Dec. 23, 1933) and Prince Masahito (Nov. 28, 1935), and 5 daughters. Succession is in the male line only.

**NATIONAL GOVERNMENT.** The new constitution, effective May 3, 1947, made drastic changes in Japan's political system. The Emperor retains only ceremonial functions, and executive power is vested in the cabinet, headed by the premier and collectively responsible to the Diet. Law-making power is vested solely in the Diet, composed of two houses—the House of Representatives, popularly elected for four-year terms, and the House of Councillors, with 250 members elected for six-year terms. A bill of rights guarantees certain basic liberties. Women are enfranchised for the first time. Sovereignty, formerly vested in the Emperor, now is vested in the people, and the House of Representatives can override the veto of the House of Councillors by a two-thirds vote.

The elections of April 1953 distributed the 466 seats in the House of Representatives as follows (1952 standing in parentheses): Democratic Liberal, 199 (204);

Progressive, 76 (88); rightwing Socialist, 66 (60); leftwing Socialist, 72 (56); dissident Liberal, 35 (39); Communist, 1 (0); others, 17 (22).

**DEFENSE.** The War, Navy, and Munitions Ministries and the Army and Navy General Staffs were abolished, and the army and navy were completely demobilized. The few remaining major ships in the navy were sunk, and the smaller ships divided among the Allies. The peace treaty of 1951 placed no limitations on the right of Japan to rearm, but the constitution prohibited the maintenance of armed forces. The national police reserve numbered upwards of 100,000 men in 1953.

The bilateral defense pact between the U. S. and Japan which became effective April 28, 1952, provided for the indefinite disposition of U. S. armed forces in and about Japan.

**EDUCATION.** Article 26 of the 1947 Constitution provides that "all people shall have the right to receive an equal education correspondent to their ability," and that education shall be free and compulsory as provided by law. A 1947 law provided a simplified school structure with 6 years of elementary education (compulsory), 3 of lower secondary, 3 of upper secondary and 4 of university education. Under U. S. supervision the school curriculum has been simplified and purged of militaristic and chauvinistic influences. In April 1951, Japan had 21,313 elementary schools with 11,419,267 pupils, 14,301 secondary schools with 7,319,978 pupils and 422 colleges and universities with 420,634 students.

**AGRICULTURE.** Japan is traditionally a land of small farms and, except in Hokkaido, the northernmost island, there is almost no large-scale farming and animal husbandry. The average holding is less than three acres. Double cropping makes self-sufficiency possible, but on a very low level of subsistence. Crop production, although hampered by fertilizer shortages, has reached prewar levels, but increased population has caused food deficits.

Major crops (thousands of metric tons):

	1950	1951	1952*
Rice (rough)	12,064	11,302	12,404
Barley	1,960	2,169	2,075
Wheat	1,338	1,490	1,537
Potatoes	2,442	2,569	2,510

\* Preliminary.

Production of silk cocoons (1952) was 103,297 metric tons; tea (1951), 44,010 tons. In 1952 there were 2,670,000 cattle, 799,000 pigs, 501,000 goats and 578,000 sheep.

**INDUSTRY.** Prewar Japan was one of the world's leading industrial nations and the only country in the Far East with highly developed textile, steel, machinery, chemical and electrical industries. The textile

industry was dominant, but after 1931 considerable expansion took place in the heavy industries—metal, machinery-building and chemical—which were adaptable to war purposes.

Postwar industrial rehabilitation proceeded slowly, retarded by labor troubles and deterioration of equipment; the manufacturing index, however, stood at 137% of the 1934-36 level in 1952.

### INDUSTRIAL PRODUCTION

(Thousands of metric tons)

	1950	1951	1952
Pig iron and ferroalloys	2,233	3,127	3,474
Steel ingots	4,839	6,502	6,900
Cement	4,462	6,548	7,117
Cotton yarn	525*	743*	779*
Cotton fabrics	1,542†	2,179†	2,239†

\* Millions of lbs. † Millions of sq. yds.

Directives issued in 1945 effected the dissolution of the huge interlocking monopolies (*Zaibatsu*) in business and finance. Voting rights in the 80 major holding companies and 3,500 subsidiaries were taken over by a government commission which also seized securities held by members of *Zaibatsu* families, for resale to the public.

In 1946, Government-owned arms plants and naval yards and 505 of the largest industrial plants were seized for distribution as reparations in line with the Allied policy of reducing Japan's industrial potential. However, the Allies were unable to agree on the allocation of reparations shares to claimant nations. Limited deliveries were made under an interim program in 1948, but on May 12, 1949, the U. S. announced its opposition to further reparations because they would prevent Japan's recovery to the point of self-sufficiency.

**TRADE.** Before World War II, Japan ranked fifth in world trade. Private trade was resumed in Sept., 1947. Recent data are as follows (in millions of U. S. dollars):

	1950	1951	1952*
Exports	820.1	1,354.5	1,272.9
Imports	974.3	1,995.0	2,028.2

\* Provisional.

Leading customers in 1952 were the U. S. (18%), Pakistan (9%) and Britain and Hong Kong (each 6%); leading suppliers, the U. S. (38%), Australia (7%), Canada (5%) and Pakistan (4%). Leading exports were iron and steel products (21%), cotton fabrics (14%), fish, rayon fabrics and raw silk (each 4%). Imports included raw cotton (21%), rice (9%), barley (8%) and petroleum and products (7%).

**COMMUNICATIONS.** On Dec. 31, 1939, Japan had 4,084 ships of more than 100 tons, with an aggregate tonnage of 5,728,779.

Before World War II the merchant marine carried almost 80 per cent of the foreign trade and was surpassed only by those of the U. S. and Britain. Wartime losses were enormous, but recovery was fairly steady. By June 30, 1952, there were 1,587 vessels (100 tons and over) with a gross tonnage of 2,787,163.

Railway mileage in 1949 was 17,017. The national and prefectural highway system totaled 83,025 miles in 1950.

**FINANCE.** World War II left Japan with a staggering public debt, mounting inflation and a disorganized financial system. Recent data on general account (in billions of yen) are as follows:

	1951-52	1952-53*	1953-54†
Revenue	895.5	1,052.8	968.3
Expenditure	749.8	930.3	968.3

\* Provisional. † Budget estimate.

The national debt totaled 814,620,000,000 yen on March 31, 1953.

**MINERALS.** Japan is relatively poor in minerals. Crude oil production in 1952 in Japan proper was 2,134,000 barrels, about one-third of current domestic requirements. With coal production estimated at 43,359,000 metric tons, the nation was still confronted with a fuel shortage. Other minerals include lead, silver, gold and copper.

**FORESTS.** Japan is well-wooded, with about 60,000,000 acres of forest. Among forest products are bamboo, charcoal and timber. Wood pulp production in 1951 totaled 806,000 metric tons; newsprint, 165,000 tons; lumber (1950), 8,632,000 cubic meters.

**FISHERIES.** Fishing, one of Japan's biggest industries, provides a staple food and considerable exports in normal years. The prewar fishing fleet of 356,462 vessels ranged from Alaska to the South Seas. The catch in 1951 amounted to 3,797,000 metric tons.

**TOPOGRAPHY.** Japan's four main islands are Honshu, Hokkaido, Kyushu and Shikoku. The Ryukyu chain to the southwest is U. S. occupied and the Kuriles to the northeast are Russian occupied. The surface of the main islands consists largely of mountains separated by narrow valleys. There are about 50 more or less active volcanoes, including famous Fujiyama near Tokyo (12,385 ft.). Earthquakes are frequent. Japan has many rivers, broken by shallows and rapids, and navigable usually for flat-bottomed boats.

**CLIMATE.** The Japanese climate ranges from subtropical in its southern extremes, to winter cold and snow in Hokkaido. The winter temperatures are moderated in the central islands by the Japan Current. The mean annual temperature in Tokyo is 56°.

## Jordan (Hashemite Kingdom of)

Area (est.): 39,460 sq. mi.\*

Population (est. 1951): 1,400,000.\*

Density per square mile: 35.4\*

Ruler: King Hussein I.

Prime Minister: Fawzi el Mulki.

Principal cities (est.): Amman, 170,000 (capital); Jerusalem (Jordan), 75,000 (religious center).

Monetary unit: Jordanian dinar.

Language: Arabic.

Religions†: Moslem (Sunni), except about 30,000 native Christians and 7,000 Circassians.

\* Including Arab Palestine (area: c. 2,350 sq. mi.; population: c. 1,000,000).

† Excluding Arab Palestine.

**HISTORY.** Jordan, once the Lordship of Oultre-Jourdain in the Latin Kingdom of Jerusalem, attracted world-wide attention in 1948 when its king, Abdullah, led Arab forces in the invasion of Palestine from the east. An ancient land, about the size of Indiana, the small kingdom was known in the time of Moses as Edom and Moab. It passed to the Amorites of Damascus and in A.D. 106 became part of the Roman province of Arabia. In 633-36 it was conquered by the Arabs, and a period of decline and depopulation ensued.

Conquered by the British in World War I, Jordan was separated from the Palestine mandate in 1920, and placed in 1921 under the rule of Abdullah ibn Hussein. In 1923 Britain recognized Jordan's independence, subject to the mandate. During World War II, Jordan co-operated completely with Britain. On March 22, 1946, Britain abolished the mandate and recognized the full and complete independence of Jordan. That part of Palestine occupied by Jordanian troops was formally incorporated by action of the Jordanian parliament on Apr. 24, 1950.

Abdullah was assassinated June 20, 1951. His son Talal was deposed as mentally ill Aug. 11, 1952. Talal's son Hussein, born May 2, 1935, succeeded him.

**GOVERNMENT AND DEFENSE.** Jordan is a constitutional monarchy. The King rules with the aid of a cabinet of department heads responsible to parliament, which consists of the popularly elected chamber of deputies of 40 members and the senate of 20 appointed members. Arab Palestine is represented in both bodies.

Defense of the country is entrusted to the British-trained Arab Legion of about 15,000 men, the most effective force among all Arab armies. The Anglo-Trans-Jordanian treaty of March 20, 1948, replacing that of March 22, 1946, has mutual assistance provisions and permits Britain to maintain air force units. Jordan receives an annual defense subsidy of £3,000,000 from Britain.

**SOCIAL AND ECONOMIC CONDITIONS.** Life in Jordan is primitive; there are estimated to be 50,000 nomads and 120,000 seminomads. At least 95 per cent of the total area is deserted. Illiteracy is widespread. In 1950, the 328 government schools had 56,425 pupils.

Most of the country is suitable only for pasturing sheep, goats and camels. Cultivated land is limited to a relatively small area west of the Hejaz Railway. In the drier cultivated areas of the plateau, the inhabitants retain tribal organization and still live in tents. Foreign trade is limited to the exchange of wheat, fresh fruit, wool and live animals for sugar, tea, and other necessities. Exports in 1952 were 1,500,000 dinars; imports, 17,400,000 dinars.

Despite the sparse settlement of the country, Jordan has good roads to Israel, Syria and Iraq. It is crossed from north to south by the Hejaz Railway.

The 1950-51 budget (excluding subsidies) was balanced at 2,344,000 dinars.

**TOPOGRAPHY AND CLIMATE.** Jordan is mainly a plateau with an average altitude of 3,000 feet, sloping gently eastward. The western edge is a steep slope overlooking the Rift Valley (Jordan River, Dead Sea and Wadi el Araba) 3,000-4,000 feet below. In the south are mountains over 5,000 feet high and a sandstone area cut by deep canyons. Jordanian Palestine is largely a hilly plateau. Jordan borders on the Red Sea for a few miles in the southwest. The subtropical steppe and desert have wet cold winters and dry hot summers. Rainfall near the escarpment decreases from about 26 inches in the north to 10 inches in the south. Average maximum temperature in August is 92°; average minimum in January is 39°.

## Korea (Chosen)

Area: 85,225 square miles.

Population (est. 1951): 30,000,000 (almost entirely Korean).

Density per square mile: 352.0.

President: Syngman Rhee.

Premier: Pak Too Chin.

Principal cities (est. 1949): Seoul (Kyeong-song), 1,446,049 (capital); Fusan (Pusan), 473,619 (chief seaport); Pyongyang, 450,000 (capital, northern Korea); Taegu, 313,705 (silk center); Inchon, 265,767 (seaport).

Monetary unit: Hwan.

Languages: Korean, Chinese, Japanese.

Religions: Buddhist, Confucianist, Taoist, Christian (500,300 Christians in 1938).

**HISTORY.** Korea, a peninsula about 600 miles long extending out from Asia between the Yellow Sea and the Sea of Japan, became an international battleground in 1950 when Communist troops of North Korea invaded the U. N.-recognized Re-

public of South Korea below the 38th parallel.

According to legend which may be partly historical, a Chinese sage named Kija founded the kingdom of Chosun ("Morning Calm") in 1122 B.C. and thus began a dynasty which lasted until 193 B.C. In 108 B.C. Korea was annexed to China, and later divided into three small principalities which formed the kingdom of Silla. Silla revolted in A.D. 918 and declared its independence. In 1592 the Koreans defeated a Japanese fleet and, with Chinese help, ousted the Japanese invaders from their land. In 1627, the Manchus seized Korea and placed it again under Chinese sovereignty. In the Chinese-Japanese War of 1894-95, Japan won predominant influence in Korea, and in 1905 reduced it to a protectorate. In 1910 Japan formally annexed Korea. A Korean bid for independence was crushed ruthlessly in 1919.

In Aug., 1945, at the end of World War II, Korea was occupied by Soviet and U. S. troops. The United States, United Kingdom and Soviet Union agreed at Moscow in Dec., 1945, that Korea should be placed under the trusteeship of those three powers and China for a period not to exceed five years. The U. S. and the U.S.S.R. were unable to agree on the formation of an all-Korean provisional government, and in Nov. 1947 the U. N. General Assembly set up a commission, boycotted by the U.S.S.R., to arrange for elections. Elections were held in the U. S. zone on May 10, 1948, for a national assembly, which on July 12 adopted a republican constitution and on July 20 elected Syngman Rhee president. The new republic was proclaimed on Aug. 15 and was recognized as the legal government of Korea by the U. N. General Assembly on Dec. 12, 1948. Meanwhile, a North Korean "People's Republic" had been formed in the Soviet zone north of the 38th parallel on May 1, 1948. It claimed jurisdiction over all of Korea.

On June 25, 1950, South Korea was attacked by North Korean Communist forces. U. S. armed intervention was ordered on June 27 by Pres. Truman and on the same day the U. N. invoked military sanctions against North Korea. Gen. Douglas MacArthur was named commander of U. N. forces on July 7. U. S. and South Korean troops fought a heroic holding action, but by the first week of August, they had been forced back to a 4,000 sq. mi. beachhead in southeast Korea. There they stood off superior north Korean forces until Sept. 15, when a major U. N. amphibious attack was launched far behind the Communist lines at Inchon, port of Seoul. By Sept. 30, U. N. forces were in complete control of South Korea; they then invaded North Korea and were nearing the Manchurian and Siberian borders when several hun-

dred thousand Chinese Communist troops entered the conflict in late October. U. N. forces then retreated successfully below the 38th parallel where in succeeding months they repulsed several major attacks. On May 24, 1951, they recrossed the parallel and had made important new inroads into North Korea when truce negotiations began on July 10.

The negotiations, broken off from time to time, made slow progress while the fighting continued inconclusively. Exchanges of seriously disabled prisoners were made in April 1953, and overall agreement seemed close when, in June 1953, Pres. Rhee (who had been re-elected for a 4-year term in Aug. 1952) announced his opposition to the terms of the proposed truce.

Gen. MacArthur was replaced as U. N. commander on April 11, 1951, by Gen. Matthew B. Ridgway, who in turn was succeeded on April 28, 1952, by Gen. Mark W. Clark.

On July 27, 1953, an armistice was signed at Panmunjom. (For further details, see Korean War in the index.)

**GOVERNMENT.** South Korea is a republic, with legislative powers vested in a bicameral parliament and executive power in a popularly elected president and a cabinet headed by a premier.

North Korea is a typical Soviet state under the constitution adopted on Sept. 2, 1948.

South Korean forces numbered upwards of 400,000 in early 1953, organized into 12 divisions and trained and equipped by the U. S.

**SOCIAL AND ECONOMIC CONDITIONS.** In 1952, there were 2,525,369 pupils in elementary schools, 298,980 in middle schools, and 140,550 in higher schools. There is a university at Seoul.

The Korean population is more or less homogeneous and successfully withstood Japanese efforts to assimilate it. South Korea has 43 per cent of the peninsula's area and over two-thirds of its population.

Korea, predominantly agricultural, cultivates about 12,000,000 acres. Chief products are rice, barley, oats, rye, millet, soybeans, tobacco, cotton and wheat. The 1952 rice crop in South Korea was about 2,920,000 metric tons.

Industrial development was speeded in the last years of Japanese rule. The leading industries by value of output ordinarily are chemical, textile, food, beverage and tobacco. Korea north of the 38th parallel has by far the larger portion of the country's industry and abundant hydroelectric resources.

Korea's prewar foreign trade was closely linked with that of Japan. South Korea's

postwar trade has been financed to a large extent by U. S. funds. Imports in 1951, excluding U. N.-financed imports, totaled 121,800,000,000 won; exports were 49,700,000,000 won. About 75% of the trade was with Japan. Chief imports were manufactured goods such as textiles and fertilizers; chief exports were raw materials. North Korea's trade is chiefly with Communist China and the U.S.S.R.

Land communications, well developed by the Japanese for strategic reasons, included about 3,500 miles of railway and 21,000 miles of highway in 1952.

South Korea is insolvent and dependent on U. S. and other contributions. The 1952-53 budget provided for expenditure of 2,748,760,000,000 hwan. The hwan was introduced in Feb. 1953 to replace the inflated won.

Korea's best mining regions are in the north. Leading products are coal, gold, silver, copper, tungsten ore, iron ore, graphite, lead, alum stone and pyrite ore.

Despite Japanese exploitation, considerable Korean forest areas remain, especially in the north. Most of the fishing companies were Japanese-owned before 1945.

**TOPOGRAPHY AND CLIMATE.** Korea's coast, with a rugged mountain range along the east, is fringed with more than a thousand islands. Several rivers are navigable for more than a hundred miles, including the Rakuto in the south, the Kan in the central region and the Yalu in the northwest, on the Manchurian border. The climate is about like that of the midwestern United States, except for a heavy rainy season in July and August. Annual rainfall is about forty inches.

## Latvia

Area: 25,395 square miles.

Population (est. 1950): 2,100,000 (1940: Lettish, 75.5% [1950: 58%]; Russian, 12%; German, 3.2%; Polish, 2.5%; others, 6.8%).

Density per square mile: 78.5.

Principal cities (est. 1939): Riga, 393,211 (capital); (est. 1935): Lilepaja, 57,098 (seaport).

Language: Latvian.

Religions (census 1930): Lutheran, 56.6%; Roman Catholic, 23.7%; Greek Orthodox, 8.9%; others, 10.8%.

Descended from ancient Aryan stock, the Latvians were early tribesmen who settled along the Baltic Sea and, lacking a central government, fell an easy prey to more powerful peoples. The German Teutonic Knights first conquered them in 1158 and ruled the area as two states—Livonia and Courland. Poland conquered the territory in 1562 and ruled until 1795 in Courland; control of Livonia was disputed between Sweden and Poland from 1562 to 1629. Sweden controlled Livonia from 1629 to

1721. Russia took over Livonia in the latter year, and Courland after the third partition of Poland in 1795. From that time until 1918, the Latvians remained Russian subjects, although they preserved their language, customs and folklore. The Russian Revolution of 1917 gave them their opportunity for freedom, and the Latvian Republic was proclaimed on Nov. 18, 1918.

The republic lasted little more than 20 years. It was occupied by Russian troops in 1939 and incorporated into the U.S.S.R. in 1940. German armies occupied the nation from 1941 to 1943-44, when they were driven out by the Russians. Most countries, including the U. S., have refused to recognize the Soviet annexation of Latvia.

## Lebanon (Republic)

Area: 3,475 square miles.

Population (est. Dec. 31, 1952): 1,330,000 (Arabian, Armenian, Circassian, Turk).

Density per square mile: 382.7.

President: Camille Chamoun.

Premier: Saab Salaam.

Principal cities (est. 1952): Beirut, 400,000 (capital, chief port); Tripoli, 110,000 (oil pipe-line terminus).

Monetary unit: Lebanese pound (£L).

Languages: Arabic, French.

Religions: Maronite, Greek Orthodox, Greek Catholic, Mohammedan.

**HISTORY.** Smaller than Connecticut, Lebanon lies at the eastern end of the Mediterranean, between Israel and Syria. In ancient times it was the mountainous hinterland of the Phoenician coast towns. From the 7th to the 11th centuries there infiltrated into southern Lebanon the heretics of Islam who finally coalesced into the Druse community.

In the 19th century the Turkish Sultanate encouraged the Druses to wage civil war against the Christian Maronites. After a massacre of 2,500 Christians in 1860, Lebanon was occupied by the French for a year. From 1864 to 1914, a Christian military government ruled the area under nominal Turkish sovereignty. After World War I, France received a League of Nations mandate over Syria and Lebanon. The French drew a Lebanese border in 1920 to offset predominantly Moslem Syria and proclaimed the area a republic under French control on May 23, 1926.

Vichy forces controlled Lebanon after the fall of France in 1940, but the Allies replaced them by July 14, 1941. Despite Syrian objections, the French permitted Lebanon to declare its complete independence on Nov. 26, 1941. Lebanon joined the Arab League and took part in the invasion of Palestine on May 15, 1948.

Bishara el-Khoury, president since 1943, resigned in Sept. 1952 and was succeeded by Camille Chamoun.

**GOVERNMENT.** The modern Lebanese republic is governed by a president elected by parliament, for a six-year term, and a cabinet of ministers appointed by the president, but responsible to parliament, which has 55 members. An independent army has been formed, based on a cadre of native *troupes spéciales*, formerly part of the French army in the Levant. The last French troops were evacuated late in 1946.

**SOCIAL AND ECONOMIC CONDITIONS.** In 1949, there were 188,702 students attending 1,821 state, Moslem, Christian, private, French, American and British schools. Beirut has two universities.

Lebanon produces tobacco, olives, grapes and other fruits, wheat and silk. Manufacturing is confined mainly to local consumers' goods. The silk industry is important in Beirut and Tripoli; cocoon production averages about 6,000 tons annually. Tobacco manufacturing is a government monopoly. An oil refinery was opened at Tripoli in 1950. (Output 1952: 547,000 metric tons.)

The customs union with Syria was dissolved in March 1950. Exports in 1952 totaled £177,600,000; imports, £1343,900,000. Leading customers were Syria (21%), the U. S. (9%) and Britain (6%); leading suppliers, Syria (18%), the U. S. (16%) and Britain (11%). The leading exports were wool and fruits.

A rail line links Beirut with Damascus and Syria. Another, built in World War II by Allied engineers, runs from Tripoli to the Israeli border, and is part of a line from Cairo to Istanbul, via Haifa. One of the oil pipelines from the Kirkuk field in Iraq terminates at Tripoli; the trans-Arabian pipeline from Saudi Arabia ends at Sidon.

The 1952 budget balanced revenue and expenditure at £194,250,000. There is no public debt.

Iron ore deposits are worked in the south, and building stone and marble are plentiful. The country also has thick deposits of inferior lignite coal.

**TOPOGRAPHY AND CLIMATE.** The topography is varied. There is a narrow coastal plain, and the steep Lebanon Mountains reach heights of approximately 10,000 feet. There are no large streams. Lebanon has hot dry summers (about 80° in Beirut) and cool rainy winters (50°-60° in January).

## Liberia (Republic)

Area: c.43,000 square miles.

Population (est. 1949): 1,600,000 (Native Negro, 99%; American Negro, .8%; white, .1%; others, .1%).

Density per square mile: c.37.2.

President: William V. S. Tubman.

Principal city: Monrovia (est. pop. 10,000; capital and chief port).

Monetary unit: U. S. dollar.

Languages: English (official), native tongues.

Religion: Protestant Christian (official); Mohammedan, Catholic, Pagan.

**HISTORY.** The history of Liberia, Africa's only republic, dates from 1816, when the American Colonization Society received a charter from the U. S. Congress, authorizing it to send emancipated Negro slaves to the west African coast.

The first settlers, who were led by Jehudi Ashmun, landed in 1822 at Cape Mesurado near the present site of Monrovia. White governors, named by the society, administered Liberia until 1841. On July 26, 1847, independence was proclaimed, and the first president was Joseph J. Roberts, a Virginia octoroon of considerable ability.

After 1920 considerable progress was made toward opening Liberia's interior, but even today only about 100,000 of its inhabitants are regarded as civilized, and lack of transportation hampers development of the heavily forested inland. In 1942, a U. S.-Liberian agreement admitted U. S. troops to build strategic airports.

In 1944 an agreement provided for permanent U. S. military and naval bases.

**GOVERNMENT.** The government is modeled after that of the United States. The president and vice president are popularly elected for eight years. The 31-member House of Representatives is elected for four years and the ten-member Senate for six years. Suffrage is extended only to land-owners over 21 who are of Negro blood, but a 1946 constitutional amendment provides for the seating in the House of an aborigine from each province in the hinterland. Liberia's army of about 4,000 men is organized on a militia basis.

**SOCIAL AND ECONOMIC CONDITIONS.** Education, compulsory in theory, is conducted in 200 schools, about half state and half mission. Attendance is about 16,000. There are six state high schools, a normal school, a state college and the Booker T. Washington Industrial and Agricultural Institute, supported by U. S. donations.

The English-speaking descendants of U. S. Negroes, known as Americo-Liberians, are the intellectual and ruling class. The aborigines, virtually all uncivilized, are divided into some 28 tribes speaking different dialects. Some are Moslems or pagans. Christians include Anglicans, Methodists, Catholics, Baptists and Presbyterians. There are a number of foreign missions.

Agriculture, on a crude level, is the principal means of livelihood for the tribal Liberians, who raise coffee, rice, sugar cane and cassava. Native manufacturing is nonexistent except for small industry, and

the country's only big enterprise is the million-acre concession granted in 1925 to the Firestone Plantations Company for rubber cultivation. Exports (1951) were 39,939 short tons. A large iron ore concession has been developed in the Bomi Hills area by Republic Steel Corp.; the first shipment left Monrovia in June 1951. Exports in 1951 totaled 166,396 short tons.

Most of the trade is with the United States. Exports in 1951 totaled \$52,549,-457, including rubber (88%), palm kernels (8%) and iron ore (1.4%). Imports were \$18,135,897, mostly textiles, machinery, vehicles, petroleum and food. The U. S. supplied 67% of the imports and took 92% of the exports.

Liberia's first railroad, a 43-mile narrow-gauge line from Monrovia to the Bomi Hills iron-ore concession, began operation in 1951. Coastwise and international air service is supplied by Pan American Airways. Interior travel is still largely by foot with native bearers, but important progress in road construction was made during and after World War II. There are no harbors except a port and naval base completed in 1947 at Monrovia, with U. S. assistance, at a cost of more than \$19,-000,000.

Finances are under U. S. supervision. The country's recent fiscal record is excellent. Actual revenue in 1951 was \$12,830,-685; expenditure, \$10,444,828. The external debt on Aug. 31, 1951, was only \$611,000; there was no internal debt.

**TOPOGRAPHY AND CLIMATE.** Liberia, about the size of Ohio, has a 350-mile frontage on the west coast of Africa, between the Ivory Coast and Sierra Leone. Its only well developed area is a low coastal strip running inland about seven miles. Beyond that is a low plateau, some of it mountainous, traversed by many rivers, of which the Cavalla (Kavalli) and the St. Paul's are the most important. The climate is tropical throughout, with rainfall up to 150 inches a year on the coast.

## Libya (Kingdom)

Area: 679,340 square miles.

Population (est. 1951): 1,124,000 (Berber, with Arab admixture, 93%; Italian, 5%; Jewish, 2%).

Density per square mile: 1.7.

Ruler: King Idris I.

Prime Minister: Mahmud Bey Muntasser.

Principal cities (est. 1950): Tripoli, 144,-616 (joint capital); Misurata, 70,000 (coastal city); Bengasi, 59,087 (joint capital).

Monetary unit: Libyan pound (£L).

Languages: Arabic, Italian.

Religions: Mohammedan (93%), Christian (5%), Jewish (2%).

**HISTORY AND GOVERNMENT.** Libya, stretching along the northern coast of

Africa between Tunisia and Egypt, was a part of the Turkish dominions from the 16th century until 1911. Following the outbreak of hostilities between Italy and Turkey in the latter year, Italian troops occupied Tripoli; Italian sovereignty was recognized the next year by the Treaty of Ouchy. In 1934 the area was organized into four provinces—Bengasi, Derna, Misurata and Tripolitania—which were incorporated in 1939 into Metropolitan Italy, and a military territory in the south, Libyan Sahara (465,362 sq. mi.). Libya was the scene of much desert fighting during World War II. After the fall of Tripoli on Jan. 23, 1943, it came under Allied administration. The U. N. General Assembly voted on Nov. 21, 1949, that Libya should become independent by 1952, and a U. N. commissioner, assisted by an advisory council, was appointed to prepare the way for self-government.

Following the adoption by the constituent assembly of a constitution, the independence of the country was proclaimed by King Idris I on Dec. 24, 1951.

Under the constitution, Libya is a hereditary monarchy with a federal form of government. Tripolitania, Cyrenaica and the Fezzan are the constituent provinces. It has a bicameral parliament consisting of a senate of 24 members, half named by the king and half by the 3 provincial legislatures, and a house of representatives elected on a proportional representation basis according to population. The cabinet, headed by the prime minister, is responsible to the federal parliament.

The ruler, King Idris I, hereditary head of the powerful Senussi sect in Cyrenaica, was born in 1890.

**SOCIAL AND ECONOMIC CONDITIONS.** Tripolitania, with one-sixth the area, has 70% of the population. About 76% of the population is rural and about 45% of that is nomadic or seminomadic. A large proportion of the area is desert.

Animal husbandry is the basic economic activity, and there are considerable numbers of cattle, sheep, camels and goats. Agriculture is possible only in the Mediterranean coastal region, where dates, olives, citrus fruit, wheat and barley are grown, and in oases in the Fezzan and elsewhere; here the principal product is dates. Sponge and tunny fisheries are carried on off the coast. Industry is undeveloped.

Important exports include wool, hides, skins, cattle, horses, sponges and esparto grass.

Railroads total 242 miles. A road extends along the coast. The principal means of communication inland are the caravans, which follow traditional routes throughout the country.

As far as is known, there are no mineral deposits in Libya. There are also no exploitable forests.

**TOPOGRAPHY AND CLIMATE.** The area has three natural divisions from the coast inland—the Mediterranean coastland, the sub-desert, and the desert.

Winters are cool and summers warm along the coast, and hotter in the interior. Bengasi has an average temperature of 55° in January and 78° in July.

## Liechtenstein (Principality)

Area: 65 square miles.  
Population (census 1950): 13,757 (mostly German).

Density per square mile: 211.6.  
Ruler: Prince Franz Joseph II.  
Chief of Government: Alexander Frick.  
Principal city (census 1950): Vaduz, 2,735 (capital).

Monetary unit: Swiss franc.  
Language: German.  
Religion: Roman Catholic.

Tiny Liechtenstein lies on the east bank of the Rhine, just south of Lake Constance, between Austria and Switzerland. It abolished its army in 1868 and has managed to stay neutral and undamaged in all European wars which have occurred since that date.

Founded in 1719, Liechtenstein was made up of the Lordships of Vaduz and Schellenburg, immediate fiefs of the Holy Roman Empire. In 1806 it joined the Rhine Federation and in 1815 the German Confederation. It became independent in 1866. Franz Joseph II, the reigning prince, was born in 1906, and succeeded his great uncle, Franz I, in 1938. In 1943 he married Countess Gina Wilczek, of Austria.

The constitution of 1921 provided for a legislature, the *Landtag*, of 15 members elected by direct, universal suffrage. Liechtenstein adopted Swiss currency in 1921, and has been part of the Swiss Customs Union since 1924. Its foreign trade statistics are included in those of Switzerland, which also administers the country's telegraph and postal service.

Wheat, wine and fruit are the chief products. There are small manufactures of cotton, leather and pottery. The country's taxes are quite painless. For many years it had no debt, but in Dec. 1952, the debt was 6,684,200 fr. Revenue in 1953 was estimated at 5,823,300 fr.; expenditure, at 5,918,142 fr. In 1953 there were 17 elementary and secondary schools, with total enrollment of 2,056.

Liechtenstein's area includes low valley land and upland peaks—Falkais at 8,401 feet, and Naarkopf, 8,432 feet. The chief mineral product is marble.

## Lithuania

Area: 22,958 square miles.  
Population (est. 1950): 3,000,000 (1940: Lithuanian, 81% [1950: 55%]; German, 4%; Polish, 3%; Russian, 2%; others, 10%).

Density per square mile: 125.4.  
Principal cities (est. 1942): Vilnius (Vilna), 132,000 (capital); (est. 1941) Kaunas, 120,000 (river port).

Language: Lithuanian.  
Religions: Roman Catholic, 80%; Lutheran, 5.5%; others, 14.5%.

Southernmost of the three Baltic states, Lithuania in the middle ages was a grand duchy joined to Poland through royal marriage. Poles and Lithuanians merged forces to defeat the Teutonic Knights of Germany at Tannenberg in 1410 and extended their power far into Russian territory. In 1795, however, following the third partition of Poland, Lithuania fell into Russian hands and did not gain its independence until 1918, toward the end of World War I.

The republic was occupied by the U.S.S.R. in 1939 and annexed outright the following year. From 1940 to 1944 it was occupied by German troops and then was retaken by the Soviet Union. Western countries, including the U. S., have not recognized the Russian annexation.

## Luxemburg (Grand Duchy)

Area: 1,010 square miles.  
Population (est. Dec. 31, 1952): 301,500 (Luxemburgian, French, German).

Density per square mile: 298.5.  
Ruler: Grand Duchess Charlotte.  
Premier: Pierre Dupong.  
Principal city (census 1947): Luxembourg, 61,590\* (capital; iron and steel).

Monetary unit: Luxembourg franc.  
Languages: Luxemburgian, French, German.

Religion: Mainly Roman Catholic.

\* Population actually present at time of census.

**HISTORY.** Luxemburg is a small buffer state between France, Germany and Belgium. Invaded and occupied in both World Wars I and II despite the fact that its neutrality was guaranteed, Luxemburg suffered most in the latter war, when the Nazis deported several thousand natives as slave labor.

Sigefroi, Count of Ardennes, an offspring of Charlemagne, was Luxemburg's first sovereign ruler. In 1060 the country came under the rule of the House of Luxemburg. From the 15th to the 18th centuries, Spain and Austria held it in turn. The Congress of Vienna in 1815 made it a Grand Duchy and gave it to William I, King of the Netherlands. In 1839 the Treaty of London ceded the western part of Luxemburg to Belgium.

After the Nazi invasion on May 10, 1940,

the government fled the country, returning in 1944 after Allied troops had liberated it. A claim for 225 square miles of German territory was made in 1946. In 1948 the grand duchy abandoned its policy of perpetual unarmed neutrality and joined the Western European Union; in April, 1949, it adhered to the North Atlantic Pact.

**GOVERNMENT.** Luxemburg is a constitutional monarchy with the crown hereditary in the House of Nassau. The sovereign, Grand Duchess Charlotte, was born Jan. 23, 1896. The heir to the throne is Prince Jean, born Jan. 5, 1921.

The constitution of 1868, as amended in 1919, provides for democratic government through a chamber of deputies of 52 members, popularly elected for six-year terms. The constitution leaves to the sovereign the right to organize the government, which consists of a minister of state who is president of the government (premier) and at least 3 other ministers. There is also a council of state of 15 members, chosen for life by the sovereign.

**SOCIAL AND ECONOMIC CONDITIONS.** Education is compulsory for all children between the ages of 6 and 13. The common or idiomatic language is *letzeburgesch*; German and French are also spoken. Labor unions are strongly organized into a single large federation.

Although the soil is not very fertile, agriculture is prosperous. Principal crops are potatoes, oats, wheat, rye and grapes. Wine production in 1952 was 2,528,394 U. S. gal.

The mining and metallurgical industries, based on iron ore found in the south, are the most important. In 1952, an average of 27 blast furnaces employed 19,721 workers and produced 3,075,986 metric tons of pig iron. Production of steel ingots was 3,001,705 tons. Electrical energy produced in 1952 totaled 831,509,000 kwh. Other industries include brewing, sparkling wine, leather, textiles and cement.

Normally, Luxemburg has little unemployment, almost no illiteracy and such low taxes that many foreign holding companies maintain legal headquarters there to escape high taxation in other countries.

By a customs union between Belgium and Luxemburg which came into force on May 1, 1922, to last for 50 years, customs frontiers between the two countries were abolished. On Jan. 1, 1948, an economic union with Belgium and the Netherlands (Benelux) came into existence. Luxemburg's foreign trade figures are included in those of Belgium and no separate statistics are available; exports consist chiefly of iron and steel products.

Transportation facilities in 1950 included 340 miles of railway and 2,673 miles of highway, of which 1,320 miles were improved.

The 1953 budget forecast revenue at 3,379,600,000 fr. and expenditure at 3,840,700,000 fr. The public debt, consolidated and floating, on Dec. 31, 1952, was 7,372,400,000 fr.

Luxemburg's prosperity depends largely on its rich iron ore mines, which produced 7,244,867 metric tons in 1952; exports in 1951 were 1,968,138 tons.

---

## Maldiv Islands (Republic)

Area: c. 115 square miles.

Population (est.): c. 93,000.

Density per square mile: c. 808.7.

President: Achmed Mohammed Amin Didl.

Principal city (est.): Malé, 8,000 (capital).

Monetary unit: Rupee.

Languages: Sinhalese (dialect), Arabic.

Religion: Mohammedan.

The Maldiv Islands, about 400 miles to the southwest of Ceylon in the Indian Ocean, were first visited by the Portuguese in the 16th century. They came under British protection in 1887 and were a dependency of the colony of Ceylon until 1948, when relations with Britain were formalized in a treaty which left domestic affairs in the hands of the islanders.

For centuries a sultanate, the islands adopted a republican form of government headed by a president in 1952. There is a bicameral legislature which is popularly elected.

The people are great traders and fishermen. Besides fishing, coir making is the chief local industry. Exports include coir, coconuts, copra, millet and fruit.

The islands consist of 12 coral atolls with about 2,000 small islands, of which about 300 are inhabited.

---

## Mexico (Republic) (Estados Unidos Mexicanos)

Area: 758,061 square miles.

Population (est. 1952): 27,283,148 (mestizo, 55%; Indian, 29%; white, 15%; others, 1%).

Density per square mile: 36.0.

President: Adolfo Ruiz Cortines.

Principal cities (census 1950): Mexico City, 2,234,795 (capital); Guadalajara, 377,016 (manufacturing); Monterrey, 333,422 (metallic industries); Puebla, 223,667 (cotton textiles); Mérida, 142,858 (sisal); San Luis Potosí, 125,662 (mineral smelting).

Monetary unit: Peso.

Language: Spanish, 86%; Indian, 14%. Religion: Predominantly Roman Catholic.

**HISTORY.** Mexico is four times the size of Spain, the source of its cultural heritage, and one-fourth the size of the United

States, the source of its modern industrial trend. In recent times the nation has steered moderately leftward in deference to the needs of its millions of peasants.

Mexico's early history is shrouded in mystery, but at least two highly civilized races—the Mayas and later the Toltecs—preceded the wealthy Aztec empire conquered in 1519-21 by the Spanish under Hernando Cortez. Spain ruled for the next 300 years until 1810 (the date was Sept. 16 and is now celebrated as Independence Day), when the Mexicans first revolted. They continued the struggle and finally won independence in 1821 by the Treaty of Córdoba.

Turbulent years followed. From 1821 to the first presidency of Porfirio Díaz in 1877, there were two emperors, several dictators and enough presidents and provisional executives to make a new government on the average of every nine months. Mexico lost Texas (1836), and after defeat in the war with the United States (1846-48) it lost the area comprising the present states of California, Nevada and Utah, most of Arizona and New Mexico, and parts of Wyoming and Colorado.

In 1855 the Indian patriot Benito Juárez began a series of liberal reforms including the disestablishment of the Catholic Church, which had acquired vast property. A subsequent civil war was interrupted by the French invasion of Mexico (1861), the crowning of Maximilian of Austria as emperor (1864), and then his overthrow and execution by forces under Juárez, who again became president in 1867.

During the rule of the dictator Porfirio Díaz (1877-80 and 1884-1911) the country was freed from political strife, made substantial economic progress, and gained a respected position in foreign affairs. But Díaz' reactionary land policy led to revolution and his resignation in 1911. The next few years were marked by bloody political-military strife, and trouble with the United States culminating in the punitive expedition into northern Mexico (1916-17) in unsuccessful pursuit of the bandit-politician Pancho Villa. President Venustiano Carranza, who had shown pro-German sympathy in World War I, was assassinated in 1920, and was succeeded by General Alvaro Obregón.

President Plutarco Elías Calles (1924-28) largely abandoned Obregón's reforms, and Obregón, re-elected in 1928 on a radical agrarian and anti-clerical platform, was assassinated by a religious fanatic before he could take office. There followed a series of Calles puppets who ruthlessly suppressed labor and farm organizations. General Lázaro Cárdenas (1934-40), backed by the National Revolutionary Party (PRI), began a socialistic program of land distribution to peasants, government seizure of

foreign-owned oil lands, and broad labor reforms. General Manuel Avila Camacho, president during World War II, co-operated closely with the United Nations and followed Cárdenas' policy at home.

In July, 1946, Miguel Alemán was elected president, backed by the Avila Camacho administration and the PRI. Alemán continued the internal policy initiated by Cárdenas; his administration was marked by continued cordial relations with the United States. Adolfo Ruiz Cortines, the administration candidate, was elected to succeed him in quiet elections held in July 1952; he took office Dec. 1.

**GOVERNMENT.** The president, popularly elected for six years and ineligible to succeed himself, governs with a cabinet of his appointed ministers. The Federal Congress has two houses—the 161-member Chamber of Deputies, elected for three years (one for each 170,000 population) and the 60-member Senate, elected for six years with two senators from each of the 29 states and two from the Federal District (Mexico City). All married male citizens at least 18, and all single male citizens at least 21 are eligible to vote.

Each of the 29 states has considerable autonomy, with a popularly-elected governor, legislature and local judiciary. The president appoints the governors of the two Federal territories, and the governing body of the Federal District.

Military service is compulsory, and the president holds supreme command of the armed forces, through the Secretary of War. The national army, greatly modernized during World War II, numbered about 55,000 men in 1951; the air force had 270 planes and two U. S.-trained squadrons. The small navy had 3 gunboats, 4 frigates, 1 armed transport and 22 coast guard vessels in 1951.

**EDUCATION.** Illiteracy is one of Mexico's big problems, and the government is trying hard to reduce the rate, estimated at 21 per cent in 1950, as against 60 per cent in 1930. Education is free, compulsory from 6 to 16, separated from the church, and under Federal control. There were 29,036 primary schools in 1950 with an enrollment of 3,986,428. In 1949, 466 general secondary schools had 80,598 students. The 12 universities had 35,602 students; about 22,000 attended the University of Mexico at Mexico City.

**RELIGION.** About 90 per cent of Mexicans are Roman Catholics, but all religions are tolerated. The 1857 Constitution separated church and state. The church cannot acquire property, and its present holdings are deemed to belong to the state. Priests, who must be Mexican-born, cannot take part in politics.

**GOVERNMENT CONTROL.** Federal control

of the national economy is increasing steadily in Mexico. The government regulates farm production, fixes prices, and controls both exports and imports. Since 1915 it has consistently broken up large estates for distribution to the poor on state-owned communal farms. In 1941, title to the land began to pass to the peasants themselves. The right to strike, maximum hours, minimum wages and a social security system—all these have been established.

**AGRICULTURE.** Primitive agricultural methods are steadily giving way to modern practices. More than 17,000,000 acres are under cultivation. About 2,775,000 acres are irrigated, but the eventual total of watered land is expected to be 12,000,000 acres. About 10 per cent of the annual budget is earmarked for irrigation projects. Approximately half the arable land is planted to corn—a staple item in the national diet. The Yucatán peninsula, at the southern end of the Gulf of Mexico, raises more than half of the world supply of sisal hemp (99,000 tons in 1950).

Production estimates for principal crops in 1951-52 were as follows, in metric tons: wheat, 370,000; maize, 3,400,000; rice (rough), 150,000; oranges, 365,000; cotton (lint), 282,000; (1950-51) coffee, 64,000; tobacco, 35,000. Sugar production totaled 757,000 tons in 1952.

Stockraising is important on non-arable land. Mexico's inventory of livestock in 1951 showed an estimated 14,600,000 cattle, 6,000,000 sheep, and 8,000,000 hogs.

A rather serious epidemic of hoof-and-mouth disease broke out among Mexican cattle in 1947. A joint U. S.-Mexican campaign to destroy all diseased and exposed cattle led to peasant opposition amounting in some cases to insurrection, but the campaign continued.

**INDUSTRY.** Considering its cheap labor, abundant raw materials and available water power, Mexico is still industrially backward, but there is steady expansion.

Total value of industrial production in 1948 was 3,920,817,000 pesos, of which cotton yarn and cloth accounted for 21.0 per cent; sugar, 12.4; flour, 7.7; beer, 7.5; iron and steel, 6.3; soap, 5.8; and cigars and cigarettes, 5.2. Other products were rubber manufactures, vegetable oils, paper, wool, silk and rayon yarn and cloth, cement, shoes and glass. By 1951, the total value of production had risen to 5,057,274,000 pesos. In 1952, 238,800 metric tons of pig iron and 601,200 tons of steel were produced.

**TRADE.** Foreign trade data, in millions of pesos, are as follows:

	1950	1951	1952
Exports	4,027	4,948	5,024
Imports	4,807	7,116	6,391

Chief exports in 1952 were cotton (23%), lead (12%), coffee (8%), copper (6%) and petroleum and products (5%). The U. S. took 78% of the exports and supplied 83% of the imports. Other leading customers were Japan, Britain and Belgium. Leading imports of the nation included wheat, machinery, vehicles and iron and steel products.

**MINERALS.** Mexico is one of the richest mineral countries in the world. It outranks all other countries in silver production (1952: 50,352,398 troy oz.). Other minerals, with 1952 production, are gold, 459,391 oz.; lead, 246,028 metric tons; zinc, 227,375 tons; copper, 58,463 tons; and antimony, 5,532 tons. A considerable variety of other industrial minerals is produced. The 1952 mineral value (excluding petroleum) was 2,660,974,147 pesos. Deposits of uranium are reported to exist.

Most of the Mexican mining properties are foreign-owned, and the industry is declining in relative importance. The oil fields, lying along the east coast, were seized by the government in 1938, but later the foreign owners were indemnified. There are 15 refineries with daily capacity of 250,000 barrels. Production in 1952 was 78,822,157 barrels, the largest since 1926. Reserves are limited.

**FORESTS.** Mexico's forests are of considerable importance. Timber produced in 1947 amounted to 398,315,352 bd. ft. of sawed lumber, 85,171,424 bd. ft. of rough-hewn lumber and 95,382,192 bd. ft. of logs (pine, oak, fir, mahogany, red and white cedar and primavera). Resins, turpentine and vegetable wax are also produced. Yucatán produces nearly all of the world's chicle, the juice of the sapodilla tree, used as the base of chewing gum. Chicle exports in 1952 were 1,359 metric tons.

**COMMUNICATIONS.** Mexico has about 17,000 miles of railroad. There were over 14,000 miles of improved highway in 1952. The merchant fleet had 64 vessels (100 tons and over) aggregating 159,714 gross tons on June 30, 1952, according to *Lloyd's Register*. Veracruz and Tampico, on the Gulf of Mexico, are the most important ports. In 1950, airlines operating in Mexico flew 26,041,104 miles and carried 1,032,413 passengers.

Recent government financial data are as follows (in millions of pesos):

	1951*	1952*	1953*
Revenue	3,104.0	3,998.1	4,160.0
Expenditure	3,102.9	3,992.2	4,160.0

\* Voted estimate.

The national debt amounted to 4,609,100,000 pesos on Dec. 31, 1950. The estimated national income in 1951 was \$4,855,500,000.

**TOPOGRAPHY.** Mexico is a great, high

plateau, open to the north, with mountain chains on east and west and with ocean-front lowlands lying outside of them. It has two big spears—the peninsula of Lower California which is mountainous, and the Yucatán peninsula, which is mostly a low plain. The eastern mountains are marked by high volcanoes, including Popocatepetl, 17,883 feet and not entirely extinct; Ixtaccihuatl, 17,338 feet; and the loftiest, Orizaba, 18,686 feet. None of Mexico's many short streams is navigable to any major extent.

**CLIMATE.** Partly in the torrid and partly in the north temperate zone, Mexico has three distinct climate regions. From the coasts inland to the plateau it is tropical, with temperatures sometimes topping 100°, but averaging from 77° to 82°. The plateau is sub-tropical with an average of 75°, and the mountains, over 8,000 feet, average 60°. On the east coast the annual rainfall sometimes reaches 100 inches, while in Lower California rain hardly ever falls. Rainfall on the plateau is 20 to 40 inches a year, comparable to that of the west central United States. In Mexico City the coldest months are December and January (about 55°); the warmest, April and May (65°). The wet season is from April to September.

## Monaco (Principality)

Area: .59 square mile (375 acres).  
Population (est. 1951): 20,000.  
Density per square mile: 33,898.3.  
Ruler: Prince Rainier III.  
Principal cities (census 1946): Monaco, 1,854; La Condamine, 9421; Monte Carlo, 7,967.  
Monetary unit: French franc.  
Language: French.  
Religion: Roman Catholic.

A tiny, hilly wedge driven into the French Mediterranean coast nine miles east of Nice, Monaco is a little land of pleasure with a tourist business that runs as high as 1,500,000 visitors a year. The home of world-famous Monte Carlo, a place of benign sun and balmy air, Monaco offers golf, tennis and bathing by day, and drinking, dining and gambling by night. Residents of Monaco are forbidden to enter the gaming rooms, but they have compensations. They pay no taxes, and most of them make good livings from the thriving tourist business.

Monaco, with its beautiful terraced hills and crags, had popular gaming tables as early as 1856. Five years later, a 50-year concession to operate the games was granted to François Blanc, of Bad Homburg. This concession passed into the hands of a private company in 1898. Government expenses are paid from the resultant revenue. The concession's annual license fee since 1936 has been £100,000.

The Phoenicians, and after them the Greeks, had a temple on the Monacan headland honoring Heracles. From *Monotikos*, the Greek surname for this mythological strong man, the principality took its name. After being independent for 800 years, Monaco was annexed to France in 1793 by the French Revolutionists, and was placed under Sardinia's protection in 1815. In 1861, it went under French guardianship but kept its independence.

Prince Albert of Monaco gave the principality a constitution in 1911, creating a national council of 21 members popularly elected for four years. The government is under a ministry, acting on the prince's authority. The ruler, Prince Rainier III, born May 31, 1923, succeeded his grandfather, Louis II, on the latter's death, May 9, 1949.

## Mongolian People's Republic (Outer Mongolia) (Republic)

Area: 580,158 square miles.  
Population (est. 1950): 900,000 (Mongol, except for about 100,000 Russians and 50,000 Chinese).  
Density per square mile: 1.55.  
Chairman of Presidium: G. Bumatsende.  
Prime Minister: Y. Tse Den-bal.  
Principal city (est. 1951): Ulan Bator  
Khotu (Urga), 80,000 (capital).  
Monetary unit: Tugherik.  
Languages: Mongolian, Russian.  
Religion: Lama-Buddhism.

**HISTORY AND GOVERNMENT.** The Mongolian People's Republic, known also as Outer Mongolia, is a Russian satellite that measures more than twice the area of Texas. It contains the original homeland of the historic Mongols, whose power reached its zenith during the 13th century under Kublai Khan. The area accepted Manchu rule in 1689, but after the Chinese Revolution of 1911 and the fall of the Manchus in 1912, the northern Mongol princes expelled the Chinese officials and declared independence under the Khutukhtu or "Living Buddha." In 1921, Soviet troops entered the country and facilitated the establishment of a republic by Mongolian revolutionaries in 1924 after the death of the last Living Buddha. China, meanwhile, continued to claim Outer Mongolia but was unable to back the claim with any strength. Outer Mongolia significantly signed a military alliance with Russia in 1936 and a treaty of friendship in 1946.

Under the Chinese-Russian Treaty of 1945, China agreed to give up Outer Mongolia, provided that a plebiscite on independence be held first. The subsequent vote was announced as 483,291 to 0, in favor of independence. On Jan. 5, 1946, China recognized Outer Mongolia's independence.

The government of the republic is strikingly similar to the Soviet system. The Great Hural or Huruldun (parliament) is elected by universal suffrage, meets at least once in three years and picks 30 members to act as an executive committee—the Little Hural—which in turn selects a presidium of seven members as an interim body. A cabinet of ten ministers appointed by the Little Hural governs the country. The only political party is the Mongol People's Revolutionary Party, formed in 1921 around a nucleus of young Soviet-trained Mongols. The army of several thousand is Russian-trained and equipped.

**SOCIAL AND ECONOMIC CONDITIONS.** A number of young Mongols are regularly sent to the U.S.S.R. for technical training. The capital, Ulan Bator Khoto, former holy city of the Mongols, has a radio station, several newspapers published in Mongolian, high schools, a university, medical schools, and a military school with Soviet advisers. In 1952, there were said to be 400 primary and secondary schools, 14 technical schools and 2 higher-education institutions in the republic. In 1947, there were 90 hospitals and 234 medical centers.

The country is largely pastoral. There are few areas suitable for crop growing, but some millet, rye and wheat are produced. Most of the people are essentially nomadic or seminomadic; flocks and herds remain the chief source of wealth. In 1951, livestock were said to number 31,000,000, mostly sheep.

There are a few industrial enterprises, including a machinery factory, a brick factory and an electric power station all located at Ulan Bator Khoto; power plants, printing shops and automobile repair shops have also been established. All land, natural resources, factories, mines, hay-making stations and public utilities are nationalized.

Foreign trade, a state monopoly, is carried on entirely with the Soviet Union. The only available trade statistics (1936) indicated exports valued at \$5,892,000 and imports valued at \$9,251,000. Leading exports are livestock, wool, hides, animal hair, meat and furs. The budget for 1952 was reported to estimate revenue at 380,-500,000 tugheriks and expenditure at 374,-000,000 tugheriks.

Although the old caravan routes are still used, and transportation is mainly by horse, camel or ox carts, a number of motorable roads exists (1938: 2,477 mi.) including a highway from Ulan Bator Khoto to the Siberian border town of Kyakhta. An airline also functions between Ulan Bator Khoto and Ulan Ude in the Buryat Mongol Autonomous S.S.R. which borders Mongolia on the north. A short rail line connects Ulan Bator Khoto with the coal

fields, and a spur from the Trans-Siberian runs to the capital.

Reserves of 500,000,000 tons of coal are said to exist in the Nalaikha field near Ulan Bator Khoto. Production in 1938 was 71,650 tons. Some gold is mined. Deposits of antimony, copper, iron ore, lead, graphite, mercury, sulfur and silver exist.

**TOPOGRAPHY AND CLIMATE.** The productive regions of Outer Mongolia—a tableland ranging from 3,000 to 5,000 feet in elevation—are in the north, which is well drained by numerous rivers, including the Kerulen, Tola, Orkhon and Selenga. The climate is continental, with hot summers and cold winters. Mean temperature at Ulan Bator Khoto is 15° in January and 64° in July. Rainfall is light throughout the country, and almost negligible in the Gobi Desert in the southeast.

## Morocco (Protectorate)

(Maroc)

Area: 161,691 square miles (French 153,-870; Spanish 7,589; Tangier 232).

Population (est. 1950): French Morocco, 8,410,000; Spanish Morocco, 1,398,000; Tangier, 111,000.

Sultan: Monlay Mohammed ben Arafa.  
French Resident General: Augustin Guillaume.

Spanish High Commissioner: Lt. Gen. Rafael Garcia Valino.

Administrator of Tangier: José Luiz Archer (Portugal).

Principal cities (census 1947): Casablanca, 551,222 (chief seaport); Marrakesh, 238,277 (trading center); Fez, 200,946 (commercial center); Rabat, 161,946 (French administrative center); Tetuán (est. 1945), 93,658 (Spanish administrative center).

Monetary units: French franc, Spanish peseta.

Languages: Arabic, French, Spanish.

Religions: Chiefly Mohammedan.

**HISTORY.** Morocco, about the size of California, is just south of Spain across the Strait of Gibraltar and looks out on the Atlantic from the northwest shoulder of Africa. It was once the home of the Berbers, who helped the Arabs invade Spain in A.D. 711 and then revolted against them and gradually won control of large areas of Spain for a time after 739.

The country was ruled successively by various native dynasties and maintained regular commercial relations with Europe, even during the 17th and 18th centuries when it was the headquarters of the famous Sallí pirates. In the 19th century, clashes with the French and Spanish became frequent. Finally, in 1904, France and Spain divided Morocco into zones of French and Spanish influence, and these were established as formal protectorates in 1912. In the same year a revolt at Fez was followed by the appointment of General

(later Marshal) Louis Lyautey as governor general. His administration, lasting until 1925 except for a brief period during World War I, was remarkable for its efficiency and far-sighted policies.

Meanwhile, Morocco had become the object of big-power rivalry, which almost led to a European war in 1905 when Germany attempted to gain a foothold in the rich mineral country. By terms of the Algeiras Conference (1906), Morocco was internationalized economically and France's privileges were limited. War again seemed imminent in 1911, when Germany dispatched a warship to Agadir in an evident attempt to intimidate France. Again the dispute was settled, however, and this time Germany recognized France's right to establish a protectorate over Morocco.

The Tangier Statute, concluded by Britain, France and Spain in 1923, created an international zone at the port of Tangier, permanently neutralized and demilitarized. In World War II Spain occupied the zone, ostensibly to insure order, but was forced to withdraw in 1945, and the international rule was re-established.

The French zone in Morocco was under the Vichy government of France during part of World War II, but three days after the Allied landing in North Africa in 1942 it came under Allied control.

Sidi Mohammed ben Youssef, sultan since 1929, was ousted by the French on Aug. 20, 1953, and replaced by his uncle, Moulay Mohammed ben Arafat.

**GOVERNMENT.** Morocco nominally is an absolute monarchy under a sultan, but actually the French resident general at Rabat and the Spanish high commissioner at Tetuan direct Moroccan policies to a large extent. The sultan lives in the French zone, and delegates authority to representatives in the Spanish zone and Tangier.

Tangier is governed by an international administration and a council of control composed of the consuls general of the signatories to the Act of Algeiras.

**SOCIAL AND ECONOMIC CONDITIONS.** Most of the natives are illiterate; some get rudimentary education in Koranic schools or state-maintained institutions. Education is provided in both zones for Europeans.

The natives are Berbers, roughly divided by customs and way of life into three groups—the Rif group along the coast, the central or Berber group in the mid-Atlas Mountains, and the southern or Chleuh in the high Atlas and the Sus. There is a large Jewish population. Most of the Europeans live in the cities.

Morocco is essentially agricultural. In the French zone, about 25,000,000 acres are arable, with 1952 production of wheat

coming to 905,000 metric tons; of barley, 1,217,000 tons. Corn, beans, peas, hemp, sorghum, citrus fruits and dates also are raised. Production of olives in 1951 was 100,000 tons. In 1951, there were 10,960,000 sheep and 2,027,000 cattle.

In the Spanish zone, agriculture is largely undeveloped, but it has potential importance. In 1950, 135,000 metric tons of barley were produced; wheat, maize and sorghum crops are also important.

Manufacturing industries introduced by Europeans, mostly small, produce chemicals, flour, leather, stone, beverages and textiles. Native industries include carpet weaving and making Turkish slippers.

Exports from the French zone in 1952 totaled 95,118,000,000 fr.; imports, 180,534,000,000 fr. Chief exports are phosphate, fish, citrus fruit and vegetables. Imports include cotton cloth, sugar, vehicles and tea. Exports from the Spanish zone in 1948 totaled 206,442,000 pesetas and imports 572,422,000 pesetas. A large proportion of the trade is carried on with Spain. Major exports are iron ore, fish and grain; imports include flour, sugar, tea, wine and textiles. Tangier's exports in 1952 were 2,864,648,000 fr.; imports were 14,678,258,000 fr.

Railroads in 1951 totaled 984 miles in the French zone and 57 miles (standard gauge) in the Spanish zone. Highway mileage in the same year was approximately 7,425 in the French zone, about 540 in the Spanish zone and 65 in Tangier. Casablanca, which handles 80 per cent of the French zone trade, has perhaps the world's largest artificial port.

The ordinary budget for the French zone in 1951 balanced at 37,783,000,000 fr.; extraordinary expenditure was estimated at 26,200,000,000 fr. The budget for the Spanish zone in 1952-53 balanced at 378,844,383 pesetas. The 1953 ordinary budget of the international administration at Tangier placed revenue at 1,642,410,000 fr. and expenditure at 1,606,259,000 fr.; extraordinary revenue, 525,500,000 fr.; expenditure, 438,852,000 fr. Customs receipts provide most of the revenue.

Exploitation of French Morocco's almost inexhaustible deposits of phosphate is a state monopoly and produced a total of 4,367,000 metric tons in 1952. Other major minerals are coal, cobalt, iron ore, manganese ore, molybdenum, tin, zinc and lead. Iron ore (1952: 970,100 metric tons) is the chief mineral of the Spanish zone; others are antimony and manganese.

Cork, gums and tannins are the principal forest products in the French zone, mostly from the northern Atlas slopes; in the Spanish zone, cork, wax and charcoal are leading products. Waters off both coasts provide rich fisheries.

**TOPOGRAPHY AND CLIMATE.** On the Atlantic coast, there is a fertile plain; the Mediterranean coast is mountainous, making most of the Spanish zone a rugged area. The Atlas Mountains, running north-eastward from the south to the Algerian frontier, average 11,000 feet in elevation.

Morocco's climate is essentially Mediterranean, modified by the Atlantic. On the Atlantic coast the temperatures are relatively cool (at Mogador, 61.5° in January and 72.3° in August). Inland the climate is more continental, with colder winters and hotter summers (at Fez, 50° in January, 80.6° in August). Rainy seasons are in October–November and April–May. Snow falls at altitudes above 3,000 ft.

## Nepal (Military Oligarchy)

Area: c.54,000 square miles.

Population (est. 1948): 7,000,000 (Gurkha [predominant], Magar, Gurung, Bho-tia [Tibetan], Newar).

Density per square mile: c.129.6.

Ruler: Tribhubana Bir Bikram.

Principal city and capital: Katmandu (estimated population, 108,800).

Monetary unit: Nepalese rupee.

Languages: Parbatia, Gubharius, Tibetan.

Religions: Hinduism, Buddhism.

**HISTORY.** A landlocked country about the size of Iowa, lying between the Republic of India and Tibet, Nepal has two great distinctions. It contains Mt. Everest, 29,141 feet high, the tallest measured mountain in the world. And it produces some of the toughest fighting men in the world—the Gurkhas.

Led by Rajah Prithwi Narayana, the Gurkhas invaded Nepal from India in 1768 and conquered it. A commercial treaty was signed with Britain in 1792, and in 1816, after more than a year's hostilities, the Nepalese agreed to allow British residents to live in Katmandu, the capital. In 1923 Britain recognized the absolute independence of Nepal. The United States and Nepal signed a treaty of friendship and trade on April 25, 1947. Plans for extensive social and political reforms were announced in the same year, but the prime minister resigned soon thereafter. King Tribhubana was deposed on Nov. 7, 1950, but was returned to the throne with Indian assistance on Feb. 15, 1951.

Nepalese troops assisted the British during the Indian Mutiny, the Tibet War of 1904, World War I, the Afghan hostilities of 1919, and World War II.

**GOVERNMENT.** Until 1951, real power was vested in the prime minister, nominated by special rules from among the royal family. The king now appoints the prime minister and cabinet members, who are responsible to him. The first commoner prime minister, M. P. Koirala, took office

in Nov. 1951. The king took over the government himself for a period in 1952–53.

The predominant Gurkhas are essentially a military caste. The army numbers about 20,000 regulars and 25,000 reserves. More than 100,000 Gurkha volunteers fought with the Indian Army in the Burma campaign of World War II.

**ECONOMIC CONDITIONS.** Cultivated and irrigated where possible, the main valley of Nepal grows rice, wheat, pulse, fruits, vegetables, spices, sugar cane and potatoes. A few sheep and cattle are grazed. Manufacturing is limited to native handicraft, but jute and textile mills are being established. Trade with India and Pakistan passes through various frontier stations, and there are two mountain trade routes to Tibet.

Main exports include hides, skins, opium, gums, resins, dyes, jute, wheat, pulse, rice, spices and timber. Two railroads enter Nepal for short distances—one from Raxaul, India, to Amlekhganj, the other from Jayauagar to Bijulpora. Transportation is for the most part difficult.

**TOPOGRAPHY, RESOURCES AND CLIMATE.** Along its southern border, Nepal has a strip of level land which is partly forested, partly cultivated. North of that is the slope of the Himalayan Range, including Mt. Everest and many peaks higher than 20,000 feet. Mineral resources, nearly all unexploited, include lignite, copper, zinc, lead, sulfur, marble and iron. Southern Nepal has valuable forests which yield gum, timber, resin and dye. Hemp plants grow wild. Mean temperature is 60°, with the hot season from April to June. Most of the rainfall (average 60 in. annually) occurs from June to October.

## Netherlands (Kingdom)

(Koninkrijk der Nederlanden)

Area: 12,514 square miles.\*

Population (est. Jan. 1, 1953): 10,434,979 (practically all Dutch).

Density per square mile: 833.8.

Sovereign: Queen Juliana.

Prime Minister: Willem Drees.

Principal cities (est. 1953): Amsterdam, 854,969 (capital, financial center); Rotterdam, 697,184 (chief port); The Hague ('s Gravenhage), 584,435 (seat of government); Utrecht, 196,768 (railway center); Haarlem, 164,974 (tulip center).

Monetary unit: Guilder.

Language: Dutch.

Religions (census 1947): Roman Catholic, 38.5%; Dutch Reformed, 31.0%; other Protestant, 13.3%; Jewish, 0.2%; others and no creed, 17.0%.

\* Land area only.

**HISTORY.** The Netherlands is small, half again as large as Massachusetts, but it is densely settled, is a major colonial power,

and was eighth from the top in world trade at the start of World War II. Occupied by the Nazis until May, 1945, the Netherlands emerged with a fairly well salvaged economy and a less than average degree of the political chaos that gripped Europe.

Julius Caesar, the Roman, found the low-lying Netherlands inhabited by Germanic tribes, the Nervii, Frisii and Batavi. The Batavi on the Roman frontier did not submit to Rome's rule until 13 a.c., and then only as allies. A part of Charlemagne's empire in the 8th century a.d., the area later passed into the hands of Burgundy and the Austrian Hapsburgs and finally in the 16th century came under Spanish rule. When Philip II of Spain suppressed political liberties and the growing Protestant movement in the Netherlands, a revolt led by William of Orange broke out in 1568. Under the Union of Utrecht in 1579, the seven northern provinces became the Republic of the United Netherlands.

The Dutch East India Company had been established in 1602, and by the end of the 17th century Holland was one of the great sea and colonial powers of Europe. In 1689 William III of Orange and his wife, Mary, the elder daughter of James II of England, became King and Queen of England. The power of the republic declined in the 18th century during the wars with Spain and France, and in 1795 French troops ousted William V.

Following Napoleon's defeat, the United Netherlands and Belgium became the "Kingdom of the United Netherlands" under William I, son of William V and head of the House of Orange. The Belgians withdrew from the union in 1830, forming their own kingdom. William I abdicated in favor of William II in 1840; the latter was largely responsible for the promulgation of a liberal constitution in 1848.

The Netherlands continued to prosper during the long reign of William III from 1849 to 1890. The male line of the House of Nassau became extinct with his death in 1890 and he was succeeded by his 10-year-old daughter, Wilhelmina, who was crowned Queen in 1898.

Neutrality was maintained during World War I, but overseas trade suffered heavily from the Allied blockade and German submarine warfare.

The prime minister from 1933 to 1939, except for brief intermissions, was Dr. Hendrick Colijn, leader of the Protestant Anti-Revolutionary Party. At the outbreak of World War II neutrality was proclaimed, but German troops invaded the country May 10, 1940, and by May 15, Dutch forces were ordered to lay down their arms. Queen Wilhelmina and Crown Princess Ju-

liana fled to London, where a government-in-exile was established under Prime Minister P. S. Gerbrandy.

The German Army in the Netherlands capitulated May 5, 1945, and on May 23, the Dutch cabinet met once more in The Hague and tendered its resignation to Queen Wilhelmina. A new cabinet was formed on June 23 under Professor Willem Schermerhorn, a resistance leader and head of the Labor party. The Catholic party obtained a plurality in the May, 1946 elections and its leader, Dr. Louis J. M. Beel, set up a Labor-Catholic cabinet on July 3.

In parliamentary elections held July 7, 1948 (made necessary by consideration of constitutional questions dealing with Indonesia), the Catholic party retained its plurality, but Dr. Beel was unable to form a new cabinet and on Aug. 2 Labor leader Willem Drees formed a new coalition government.

Queen Wilhelmina abdicated after her fiftieth anniversary as ruler on Sept. 6, 1948, and was succeeded by Juliana, her only daughter.

The Labor party gained a plurality in elections held in June 1952, and Drees continued as prime minister at the head of a coalition government.

**GOVERNMENT.** Queen Juliana, born April 30, 1909, was married on Jan. 7, 1937 to Prince Bernhard of Lippe-Biesterfeld (born in 1911). They have four daughters: Beatrix, heiress apparent (born Jan. 31, 1938); Irene (born 1939); Margriet Francisca (born 1943), and Maria Christina (born 1947).

The Netherlands is a constitutional and hereditary monarchy, with female succession taking place only in default of male heirs. Executive power is vested exclusively in the sovereign, while legislative power rests with the sovereign and the States-General (Parliament). The upper chamber of Parliament, with 50 members, is elected for 6 years by the provincial states. The lower chamber, which shares with the government the privilege of initiating new bills and proposing amendments, consists of 100 deputies who are elected directly for four years and retire *en bloc*. Executive power is exercised in part by responsible ministers, headed by the prime minister and holding office at the pleasure of the sovereign. Suffrage is universal for all Dutch subjects of 23 years of age. The party standing in the lower chamber (elections of June 1952) is as follows: Catholic 30, Labor 30, Anti-Revolutionary 12, Christian Historical Union 9, Freedom and Democracy 9, Communist 6, others 4.

Each of the eleven provinces has a local representative body—a Provincial State—presided over by a royal commissioner. The State collects taxes, and legislates on local

matters. Routine administrative work of the province is carried on by a group of six members called the Deputed States. Each of the 1,054 communes has a locally elected council and a mayor appointed by the crown.

**DEFENSE.** Military service is compulsory. The army had about 175,000 men in 1949, and the air force 300 planes. The navy on Jan. 1, 1953, had 1 fleet carrier, 2 light cruisers (2 more under construction), 6 destroyers, 7 submarines, 10 frigates and other smaller craft. Defense forces were being expanded under a 4-year program, and 5 divisions were pledged to support NATO. An infantry force of 1,000 men and a destroyer were sent to Korea. A separate air force was created in 1953.

**EDUCATION.** Education is compulsory from the ages of 7 to 13; illiteracy is almost unknown. In 1950-51, elementary schools numbering 7,117 (of which 4,723 were private) had a total enrollment of 1,240,658; 1,298 secondary schools had 211,158 pupils. The 6 universities and 4 *hogescholen* (vocational colleges) had 28,250 students. The 4 public universities are at Leyden, Utrecht, Groningen and Amsterdam; the 2 voluntary universities are the Calvinist University of Amsterdam and the Roman Catholic University of Nijmegen.

**RELIGION.** The royal family and a large number of the inhabitants belong to the Dutch Reformed Church (Protestant), but there is complete religious freedom. Appropriations from the national budget are made for support of the Protestant, Roman Catholic, Jewish and Jansenist Churches. The Roman Catholic element is strongest in the southern provinces of Limburg and North Brabant.

**AGRICULTURE.** Dutch farms are characteristically small, with only a few larger than 250 acres. Wheat (327,165 metric tons in 1952), barley (239,625 tons), rye (497,040 tons), oats (482,983 tons), potatoes (4,284,000 tons) and sugar beets (2,789,211 tons) are grown, but dairying is more important. In 1952, there were 2,854,000 cattle, 1,842,000 hogs, 382,000 sheep and 240,000 horses. Production of cheese (1952: 125,256 metric tons), milk (5,879,200 tons), butter (73,625 tons) and eggs (204,750,000 doz.) is under state control. Large quantities of vegetables and fruits are raised for export. Almost as important as the dairy industry is the raising of tulip, hyacinth and other flower bulbs in the area around Haarlem.

**INDUSTRY.** The Netherlands is a highly industrialized nation, utilizing both overseas raw materials and domestic agricultural products. In 1948 there were 9,230 larger establishments with 773,527 workers. Leading industries are textiles, clothing,

shipbuilding, shoes, food, and building materials.

The Netherlands ranks high among the world's shipbuilding nations; 152 vessels of 452,983 gross tons were under construction on March 31, 1953. Amsterdam is one of the world's leading diamond-cutting centers.

**TRADE.** The adverse balance of trade increased markedly after the end of World War II. Trade statistics, in millions of guilders (excluding parcel post, specie and diamonds) are as follows:

	1950	1951	1952
Exports	5,287.8	7,414.7	8,007.0
Imports	7,752.4	9,671.0	8,511.4

Principal customers in 1952 were Belgium (15%), western Germany (14%), Britain (12%), the U. S. (6%) and Indonesia (5%). Leading suppliers were Belgium (17%), western Germany (14%), the U. S. (13%), Britain (9%) and Indonesia (6%). The chief exports were dairy products and eggs (12%), machinery and apparatus (8%), fabrics and clothing (8%), petroleum products (7%) and meat and fish (6%). Leading imports were machinery, fabrics and clothing, iron and steel and manufactures, cereals and flour, and petroleum and products.

**COMMUNICATIONS.** The Dutch merchant marine had 1,268 seagoing vessels of 3,224,378 gross tons on Jan. 1, 1953—the seventh largest fleet in the world. An extensive network of rivers expanded by many canals has led to extensive development of inland shipping. The length of navigable canals and rivers is almost 5,000 miles. River ships and barges numbered 16,774 on Jan. 1, 1953, with total deadweight tonnage of 4,328,000. In 1952, 77,000,000 metric tons of freight were carried on rivers and canals. The wealth of water transport has obviated the need for wide railway development. In 1951, there were 1,993 miles of railway, all operated by a government-owned company, and, in 1950, 4,418 miles of primary and secondary roads.

Air service is provided by Royal Dutch Airlines (KLM) which flew 27,732,000 miles on 77 routes in 1952 and carried 517,075 passengers.

**FINANCE.** Recent financial data are as follows (in millions of guilders):

	1951*	1952†	1953†
Revenue	5,500	5,304	5,214
Expenditure	5,088	5,568	5,706

\* Provisional. † Budget estimate.

The national debt on Dec. 31, 1952, including debt to the Netherlands Bank and war damage obligations, totaled 23,402,000,000 guilders.

**MINERALS, FORESTS AND FISHERIES.** Netherlands minerals are few. The only

important ones are coal (12,528,000 metric tons in 1952), lignite and salt. There also are peat swamps and about 630,000 acres of forest. The Netherlands fishing fleet made a catch of 275,000 metric tons valued at 89,400,000 guilders in 1952. Herring (134,600 tons) was the most important item.

**TOPOGRAPHY.** Part of the great plain of north and west Europe, the Netherlands has maximum dimensions of 190 by 160 miles and is low and flat except in Limburg in the southeast, where some hills rise to 300 feet. About half the country's area is below sea level, making the famous Dutch dikes a requisite to use of much land. Reclamation of land from the sea through dike-building has continued through recent times, and such land is usually very fertile.

The province of Zeeland consists mainly of six delta islands guarding the mouth of the Schelde (Scheldt) River and the entrance to Belgium's port of Antwerp. Off the northwest coast are the sandy West Frisian Islands, lying from three to twenty miles out and stretching from the Zulder Zee to the German coast.

All drainage reaches the North Sea, and the principal rivers—Rhine, Maas (Meuse) and Schelde—have their sources outside the country. The Rhine is the most heavily used waterway in Europe, and nearly three-fourths of its 75 to 85 million tons of annual prewar traffic was handled through the port of Rotterdam.

**CLIMATE.** Marsh mists, sea fogs and a humidity exceeding 80 per cent mark the Netherlands climate. Winters are colder than in eastern England at the same latitude. Utrecht, roughly central in location, has a January average temperature of 34.2° and a July average of 62.6°. Average rainfall for the country is about 28 inches. July–Sept. is the wettest period.

#### NETHERLANDS OVERSEAS TERRITORIES\*

**NETHERLANDS ANTILLES**—Status: Part of the United Kingdom of the Netherlands.

Area: 403 square miles.

Population (est. 1951): 166,000.

Capital: Willemstad (pop. 1951: 48,000).

Governor: A. A. M. Struycken.

Foreign trade (1951): exports, 1,324,800-000 florins; imports, 1,447,200,000 florins. Chief export: petroleum products (more than 95 per cent).

Agricultural products: aloes, beans, corn. Manufactures: refined petroleum, straw hats.

Mineral products: lime phosphate, salt.

This comprises two groups of Caribbean islands 500 miles apart; one, about 40 miles off the Venezuelan coast, consists of Curaçao (210 sq. mi.), Bonaire (95 sq.

mi.) and Aruba (69 sq. mi.); the other, lying to the northeast, consists of 3 small islands with a total area of 29 square miles. The Dutch acquired the island of Curaçao from Spain in 1634 and have held it since, except for short intervals during the Napoleonic Wars. The U. S. accepted the invitation of the Netherlands government during World War II to dispatch troops to Curaçao to co-operate in its defense. Administrative officials include the governor (appointed by the crown) and an elected legislature and cabinet.

The backbone of Curaçao's economy is the refining of crude oil which comes from the adjacent Maracaibo fields in Venezuela. The refinery located on Aruba is the world's largest. Aside from native Curaçaoans, there were in the territory 7,511 English, 5,156 Dutch and 4,213 Venezuelans in 1943. Dutch is the official language, but many inhabitants speak a patois known as Papamentu, a mixture of Spanish, Dutch, English, Portuguese, native and other words. Only a small part of the trade of the territory is carried on with the homeland.

The island of Curaçao has a torrid climate, with average temperatures of 79° in January and 83° in September. Rainfall is light, averaging only 16 inches annually. It occurs mostly in the October–January period.

**SURINAM (Dutch Guiana)**—Status: Part of the United Kingdom of the Netherlands.

Area: 54,291 square miles.

Population (est. 1951): 223,000.\*

Capital: Paramaribo (pop. 1951: 78,000).

Governor: J. Klaasesz.

Foreign trade (1951): exports, 39,708,758 Surinam guilders; imports, 45,833,093 guilders. Chief export: bauxite (70%).

Agricultural products: rice (1950: 50,-428 metric tons), sugar, coffee.

Minerals: bauxite (1951: 2,715,195 metric tons), gold (6,494 troy oz.).

Forest products: balata (1951: 272 metric tons), timber.

\* Including aborigines, numbering about 25,000.

Surinam lies in northeastern South America between British and French Guiana. It was received by the Dutch from England at the Peace of Breda (1667) in exchange for New York and at that time included British Guiana, which was seized by England in 1803 and formally ceded to her at the conclusion of the Napoleonic Wars. The United States and Brazil accepted the invitation of the Netherlands government during World War II to co-operate in the defense of the valuable bauxite mines. The governor (appointed by the crown) is assisted by an all-native legislature and cabinet, which have sole responsibility in all matters relating to domestic affairs.

\* For Indonesia, see page 657.

Mining is the most important activity, and only about 65,000 acres are devoted to agriculture. The largest bauxite mines are owned by Aluminum Company of America subsidiaries. In 1946 a company was formed to work 10,000,000 acres of the area's vast, but almost inaccessible, hardwood forests.

In 1948 the heterogeneous population included 2,100 Europeans, 2,560 Chinese, 22,000 Djukas (descendants of escaped slaves), 3,700 aboriginal Indians, 81,750 Negroes and mulattoes, as well as 97,000 Indian and East Indian laborers brought in after the abolition of slavery in 1863 to work the sugar plantations.

From its settled coastal plain, Surinam runs back to a virtually unexplored mountain and jungle area along the Brazilian border. Rivers are the chief means of interior travel. The climate is tropical throughout but is modified by the north-east trade winds. Yearly range of temperature is approximately 70.5°-90°. Annual rainfall in Surinam is about 90 inches along the coast.

**NETHERLANDS NEW GUINEA**—Status: Part of the United Kingdom of the Netherlands.

Area: 151,789 sq. mi.

Population (est. 1951): 700,000.

Capital: Hollandia (pop. 1951: 32,000).

Governor: Jan van Baal.

Agricultural products: sago, coconuts, sugar cane, sweet potatoes.

Minerals: petroleum, nickel, chrome.

The western part of New Guinea, second largest island of the world, with smaller adjacent islands, forms part of the kingdom of the Netherlands. The area remained Dutch upon the transfer of sovereignty in Indonesia in Dec., 1949, with the understanding that its status would be determined within one year by negotiation between the Netherlands and Indonesia. Subsequent negotiations did not lead to any agreement.

Dutch influence dates back to the activities of the Dutch East India Company in the 17th century. In 1828, the Dutch government declared Northwest New Guinea part of the Dutch East Indian colonies, and the area was administered as part of the Netherlands Indies until 1949.

The Papuans are the dominant stock; there are also Melanesian and Negrito elements. Commerce and industry are almost unknown, and life is primitive, with head-hunting and cannibalism not unknown even today.

The northern half of the area is mainly hilly, with a very high range of mountains traversing it from east to west. The extreme west is almost entirely hilly, and the south is flat with vast swamps near the coast.

## Nicaragua (Republic)

(República de Nicaragua)

Area: 57,143 square miles.\*

Population (census 1950): 1,057,023 (1943: mestizo, 69%; white, 17%; Negro, 9%; Indian, 5%).

Density per square mile (land only): 19.7.

President: Anastasio Somoza.

Principal cities (census 1950†): Managua, 109,352 (capital); León, 30,544 (trading center); Granada, 21,035 (trading center); Chinandega, 13,146 (sugar).

Monetary unit: Córdoba.

Language: Spanish.

Religion: Roman Catholic.

\* Including inland water area of 3,475 square miles.

† Urban population of municipalities.

**HISTORY.** Nicaragua was first visited by the Spaniards in 1522. The chief of the country's leading Indian tribe at that time was called Nicaragua, from whom the nation derived its name. The country was part of Spanish Guatemala until the general Central American revolution in 1821. Upon the dissolution of the Central American Union in 1838, Nicaragua established itself independently. A United States naval force intervened in 1909 after two American citizens had been executed, and a few U. S. Marines were kept in the country from 1912 to 1925. The Bryan-Chamorro Treaty of 1916 gave the United States an option on a canal route through Nicaragua, and naval bases in the Gulf of Fonseca on the Pacific coast and on Corn Islands on the Atlantic side. Disorder after the 1924 elections brought in U. S. Marines again, but they were withdrawn gradually after the U. S.-supervised elections of 1928, although sporadic fighting continued between government troops and rebel forces under General Augusto Sandino. Juan B. Sacasa was elected president in the U. S.-supervised elections of 1932, but he was forced to resign in 1936. General Anastasio Somoza, elected president in Dec., 1936, restored political and economic stability. Re-elected in 1939, he remained the virtual dictator. Dr. Leonardo Argüello was elected president in Feb., 1947 but was ousted after taking office because of his opposition to Somoza. The newly elected constituent assembly named Victor M. Román y Reyes president on Aug. 15, 1947. Gen. Somoza took office again on May 21, 1950, after national elections.

**GOVERNMENT AND DEFENSE.** The constitution of 1948 provides for a president, popularly elected for six years, and a two-house Congress—a 44-member Chamber of Deputies and a 15-member Senate—both elected for six years. There are sixteen regional departments. Military service is voluntary. The Guardia Nacional, both an army and police force, numbers about 3,500. A naval base built at the Pacific port

of Corinto by the U. S. during World War II was turned over to Nicaragua in 1946.

**SOCIAL AND ECONOMIC CONDITIONS.** Although primary education is free and compulsory, about 60 per cent of the people are illiterate. There are 3 universities and several vocational schools. In 1951-52 there were 1,261 schools of all kinds with 86,764 students. Western Nicaragua, with about 75 per cent of the population, is inhabited principally by mestizos of Spanish and Indian blood, with some whites and Indians. Negroes and Indians are dominant in eastern Nicaragua.

More than half of Nicaragua is jungle-covered; agriculture, the leading industry, utilizes only 10 per cent of the total land. Coffee (exports 1951-52 season: 295,020 bags of 132 lbs. each) is the chief crop and grows in the western part, which also produces sugar cane, cacao, sesame, beans, rice, tobacco and corn, the chief subsistence crop. Bananas lead in the eastern part, with cotton second. About 900,000 acres are devoted to livestock grazing. Except for some sugar refining, only locally consumed products are manufactured.

Exports in 1952 (excluding gold) were valued at \$42,240,000; imports, at \$39,709,628. The U. S. supplied 71% of the imports and took 52% of the exports. Besides gold (about \$9,100,000), leading exports were coffee (51%), cotton (9%) and sesame.

Gold (1952 exports: 254,675 troy oz.) rivals coffee as the most lucrative export. Exports of silver (1951) were 209,898 troy oz. One-third wooded, Nicaragua produces mahogany, rosewood, cedar, rubber and ipecac root. In 1949, Nicaragua exported 22,197,867 bd. ft. of logs and lumber.

Good highways, long lacking, are now being constructed; there were 418 miles of paved road in 1949. Railways, mostly nationalized and limited to the west, were only 268 miles in 1951. TACA (Central American Airlines) and Pan American both supply air service. Corinto and San Juan del Sur, on the Pacific, are the chief ports.

The 1952-53 budget forecast expenditures of 132,935,546 córdobas. The public debt in June 1952 was 45,681,000 córdobas, of which 13,241,000 córdobas was internal.

**TOPOGRAPHY AND CLIMATE.** Largest but most sparsely populated of the Central American nations, Nicaragua is mountainous in the west, with fertile valleys. A plateau slopes eastward toward the Caribbean. Two big lakes—Nicaragua, about 100 miles long, and Managua, about 38 miles long—are connected by the Tiptapa River. The Pacific coast is bald and rocky; the Caribbean coast, swampy and indented, is aptly called the "Mosquito Coast." The highlands have cool temperatures, while the coasts are hot and sultry. The east

coast receives up to 100 inches of rain a year. The wet season is generally from May or June through November or December.

## Norway (Kingdom)

(Norge)

Area: 125,193 square miles.

Population (est. Dec. 31, 1952): 3,343,000 (Norwegian, 98.7%; Swedish, .8%; others, .5%).

Density per square mile: 26.7.

Sovereign: King Haakon VII.

Prime Minister: Oskar Torp.

Principal cities: (est. 1952) Oslo, 441,500 (capital, chief port); (census 1946) Bergen, 110,424 (seaport, shipbuilding); Trondheim, 57,128 (seaport, timber, fish); Stavanger, 50,320 (seaport, fisheries).

Monetary unit: Krone.

Language: Norwegian.

Religions: Evangelical Lutheran (state), 96.8%; others, 3.2%.

**HISTORY.** Norwegians, akin to Swedes and Danes, are of Teutonic origin. In the 7th and 8th centuries, Vikings from Norway constantly attacked the British Isles, and in the 9th century many of them settled in what are now Ireland and Normandy. Norway became a united kingdom in 872 under King Harald Haarfager. Christianity was introduced in the 10th century by King Olaf I.

Under the rule of Haakon IV (1217-63), Norway reached a peak of power, ruling the Shetland and Orkney Islands, Iceland, Greenland and the Hebrides. In 1319 Norway and Sweden were united under King Magnus VII, and in 1397 Denmark joined this union under Erik of Pomerania.

In 1450 the triple bond gave way to a union in which Norway was closer to Denmark, but the Treaty of Kiel, in 1814 at the end of the Napoleonic Wars, ceded Norway to Sweden. Norway protested and declared itself independent. Sweden thereupon invaded Norway and forced the issue, requiring Norway to recognize the king of Sweden but leaving Norway its own government, army, navy and customs.

After this union was dissolved in 1905, Prince Karl of Denmark was elected king of Norway by the Storting (parliament) and ascended the throne as Haakon VII. During World War I, Norway was able to preserve its neutrality, though it suffered greatly from the Allied blockade and from the loss of many merchant ships. In World War II, Norway was invaded by the Germans on April 9, 1940, and resisted for two months before Nazi control was complete. On June 7, King Haakon and the government fled to London and established a government-in-exile.

Meanwhile, in Norway, a new word was born—quisling. It was derived from Major Vidkun Quisling, a Norwegian traitor

who collaborated with the Germans and who was Minister President of the German-sponsored occupation government. Quisling eventually was executed by the Norwegians in October, 1945.

King Haakon and the government returned immediately after the German collapse in May, 1945, and an interim coalition cabinet took over, headed by Einar Gerhardsen. The latter's Labor party won a majority in the general elections of Oct. 8, 1945, and an all-Labor cabinet formed on Nov. 5, 1945, led the nation thereafter. Gerhardsen resigned in Nov. 1951, however, and was replaced by Oskar Torp.

Despite Soviet pressure, Norway adhered to the North Atlantic Pact in April 1949.

King Haakon VII, born August 3, 1872, second son of Frederick VIII of Denmark, married Princess Maud (born 1869, died 1938), third daughter of Edward VII of England. Their one son—Olaf, Crown Prince, born July 2, 1903—married Princess Märtha of Sweden (born 1901) on March 21, 1929. Their children are Princess Ragnhild Alexandra (born 1930), Princess Astrid (born 1932) and Prince Harald (born 1937). King Haakon is the uncle of Frederick IX of Denmark.

**GOVERNMENT AND DEFENSE.** Norway is a constitutional and hereditary monarchy with succession in the direct male line. The king's executive power is exercised by a council of state, or cabinet, consisting of the prime minister and at least seven other councillors. The 150 members of the Storting are popularly elected for a term of 4 years under proportional representation. When assembled, the Storting divides itself by election into two sections, the Lagting, composed of one-fourth of the members (38) and the Odelsting, composed of the rest. The Storting has a predominant position in the government since the cabinet is responsible to it. Moreover, the king cannot dissolve it before the expiration of its term. There is universal suffrage for all citizens, male or female, over 23. Party representation in the Storting (elections of Oct. 10, 1949) is Labor, 85; Conservative, 23; Liberal, 21; Agrarian, 12; Christian People's, 9.

The department of defense serves as a coordinating body for the army, navy and air force. The army is a national militia with compulsory service from 18 to 55. Army strength in 1951 was about 15,000. The navy on Dec. 31, 1952, had 5 fleet destroyers, 9 submarines, 14 frigates and escort vessels and other minor ships.

**SOCIAL AND ECONOMIC CONDITIONS.** Education is compulsory and free from 7 to 14. Illiteracy is almost unknown. In 1948-49, elementary schools had enrollment of 300,174, and secondary schools had 39,921. There are 2 universities—Oslo (4,682 students in 1950) and Bergen (756).

The endowed state religion to which the king must conform is Evangelical Lutheran. The king nominates the clergy of the established church, which takes a leading part in primary education. All other Christian religions are tolerated, but Jesuits are barred.

From 1820 to 1920, more than 800,000 Norwegians emigrated, 98 per cent of them to the United States.

The well-advanced social welfare program includes social security, introduced late in the 19th century, poor relief, care of mothers and children, schools for the blind, deaf and deformed, housing, training of social workers, and old-age pensions. Labor is protected by a number of acts which provide for vacations, arbitration of disputes, and unemployment, accident and sickness insurance. The co-operative movement is well-organized.

Land suitable for cultivation, estimated at less than 5 per cent of the total area, consists of strips in the deep narrow valleys and around fiords and lakes. Food-stuff production is insufficient to meet domestic needs. Leading crops, with 1952 production in metric tons, are wheat, 40,000; barley, 150,000; oats, 161,000; potatoes, 1,188,000; hay and fodder. The country is more adapted to stock raising than to crop growing; in 1951, there were 1,231,000 cattle, 1,929,000 sheep and 118,000 goats.

Raw materials produced in Norway form the basis of most of the manufactures. In 1950 there were 6,166 industrial establishments with 219,265 workers and gross production valued at 8,883,000,000 kr. Leading industries are food, machinery, metals, wood, paper and electro-chemicals. On Mar. 31, 1953, 52 vessels of 157,604 gross tons were under construction in Norwegian yards.

Statistics of foreign trade are as follows, in millions of kroner:

	1950	1951	1952
Exports	2,789	4,427	4,039
Imports	4,849	6,266	6,234

In 1951 the leading suppliers were Britain (23%), the U. S. (13%), Sweden (12%) and Germany (8%). Leading customers were Britain (20%), Germany (9%), Sweden (8%) and the U. S. (7%). Chief exports were pulp, paper and cardboard (30%), fish and products (14%), fish oil and ships.

The normally adverse trade balance is offset to some extent by invisible exports, particularly the earnings of the large merchant marine.

Norway is one of the greatest seafaring nations, and its merchant marine of 961 vessels (1,000 tons and over) of 5,532,000

gross tons (June 30, 1952) is the third largest in the world. War-time losses amounting to 2,393,000 tons were the third highest among the United Nations. The long coast line and the difficulties of inland transportation make coastal shipping especially important. In 1950 there were 2,776 miles of railway and 27,500 miles of highway.

The 1953-54 budget was balanced at 4,343,000,000 kr. The public debt on Dec. 31, 1952, was 5,201,000,000 kr.

Mineral resources are extensive, but coal deposits are entirely lacking except in Spitsbergen. The most important minerals (1952 production in metric tons) are iron ore, 768,970; aluminum, 52,455; pyrite ore, 708,895; zinc, 38,385; and copper ore, molybdenum ore, tungsten, antimony ore, tin and silver.

Cheap electric power, produced mainly by hydroelectrical plants (average monthly production 1952: 1,534,000,000 kwh), makes possible the extraction of nitrogen from the air and manufacture of potassium nitrate, an important fertilizer.

The forests, largely in the south and southeast, are one of the chief natural resources. About 25 per cent of the total area is covered with forests, of which 70 per cent is pine. Timber production in the 1952-53 season was about 6,500,000 cu.m. Paper and cardboard production in 1951 was 511,000 metric tons; chemical pulp, 529,315 tons; mechanical pulp, 553,934 tons.

Fishing is one of the principal industries, engaging as many as 100,000 persons annually. A large number of the best European food fisheries are situated along the coast. The 1952 catch totaled 1,585,000 metric tons valued at 491,500,000 kr. Norwegians are the world's leading whalers and were the first to develop pelagic (open sea) whaling. Whale-oil production in the 1951-52 season was 170,542 long tons.

**TOPOGRAPHY AND CLIMATE.** Nearly 70 per cent of Norway is uninhabitable and covered by mountains, glaciers, moors and rivers. Its extreme length from the Skagerrak to North Cape—Europe's most northerly point, far above the Arctic Circle—is about 1,100 miles. Breadth averages 60 miles, with a maximum of 260. The hundreds of deep fjords that cut into Norway's coast line give it an over-all ocean front of more than 12,000 miles. Along the Swedish border are the rugged Kjölen (Keel) Mountains, and northeast of Bergen are the highest of Norwegian mountains, with Galdhøpiggen rising to 8,097 feet. Islands off the coast, numbering almost 150,000, form a breakwater and make a safe coastal shipping channel. The Lofoten and Vesterålen Islands, off the northwest coast, have an area of about 1,560 square miles.

Norway has many rivers and lakes. Most

of the rivers are short and swift, with numerous falls, and are invaluable as sources of hydroelectric power. By increasing the development of such power, Norway hopes to free itself from the necessity of importing coal, of which it has almost none.

The Gulf Stream affects the climate mildly. Summer temperatures range from about 60° in the extreme north to 60.6° at Oslo in July. February temperatures in Oslo average 24°, against 11° to -12° in the north. Norway is one of the lands of the midnight sun; in the extreme north for many weeks in the summer the sun never sets, and for an equal time in the winter the sun does not rise. Rainfall is heavy on the coast but decreases sharply inland.

## OUTLYING TERRITORIES

### SPITSBERGEN (SVALBARD).

This arctic archipelago, with an area of approximately 25,000 square miles, lies about 400 miles north of Norway and consists of West Spitsbergen (15,200 sq. mi.), North-East Land (about 6,000 sq. mi.), Edge Island (2,500 sq. mi.), Barents Island (580 sq. mi.), and several small islands including Bear Island. The group was probably discovered by Norwegians in A.D. 1194 and rediscovered by the Dutch navigator Barents in 1596. The question of sovereignty was long unsolved. By a treaty signed with the disputing nations on Feb. 9, 1920, however, Norwegian sovereignty was recognized, and Norway declared the area a part of the kingdom Aug. 14, 1925. Spitsbergen was occupied by Allied forces in the summer of 1941. Soviet proposals for establishment of joint military bases were rejected by Norway in Feb., 1947.

In the 18th and 19th centuries, Spitsbergen was a whaling center, but now the only important product is coal (1950: 373,926 metric tons). Population (1949), largely miners, none indigenous: 3,950.

### JAN MAYEN ISLAND.

This arctic island (144 sq. mi.), lying between Greenland and the north of Norway, was discovered by Henry Hudson in 1607. It was annexed to Norway May 8, 1929. A Norwegian weather station was established in 1921, and during World War II a U. S. Navy weather station was maintained on the island. It is otherwise uninhabited.

**OTHER TERRITORIES.** Norway also exercises sovereignty over Bouvet Island (22 sq. mi.) in the South Atlantic, Peter I Island (94 sq. mi.) in the Antarctic Ocean, and that part of the Antarctic continent lying between 20 degrees and 45 degrees east. All are uninhabited.

Outer Mongolia. See Mongolian People's Republic

**Palestine. See Israel; Jordan**

## Panamá (Republic) (República de Panamá)

Area: 28,575 square miles.  
Population (est. July 1, 1953): 863,600  
(1940: mestizo, 65.34%; Negro, 13.31%;  
white, 11.07%; Indian, 9.53%; others,  
.75%).

Density per square mile: 30.2.

President: José Antonio Remón.

Principal cities (census 1950): Panamá  
City, 127,874 (capital and chief port);  
Colón, 52,204 (chief Caribbean port);  
Ciudad David, 14,847 (bananas).

Monetary unit: Balboa.

Language: Spanish (official).

Religion: Roman Catholic, 93%; Protes-  
tant, 6%; others, 1%.

**HISTORY.** Visited by Columbus in 1502  
on his fourth voyage and explored by Bal-  
boa in 1513, Panamá was the principal  
transshipment point for Spanish treasure  
and supplies to and from South and Cen-  
tral America in colonial days. In 1821,  
when Central America revolted against  
Spain, Panamá joined Colombia, which al-  
ready had declared its independence. For  
the next 82 years, Panamá attempted un-  
successfully to break away from Colombia.  
After U. S. proposals for canal rights over  
the narrow isthmus had been rejected by  
the Colombian Senate, Panamá proclaimed  
its independence with U. S. backing in  
1903. U. S. Marines restrained Colombian  
intervention on the ground that the U. S.-  
Colombian treaty of 1846 gave the United  
States the right to keep the isthmus open.

For canal rights in perpetuity, the  
United States paid Panamá \$10,000,000,  
and agreed to pay \$250,000 (\$430,000 after  
devaluation of the U. S. dollar in 1933)  
each year. In exchange, the United States  
got the Canal Zone, a ten-mile-wide strip  
across the isthmus, and a considerable de-  
gree of influence in Panamanian affairs.

During World War II the U. S. was  
granted the right to establish a number of  
bases in Panamá. All were evacuated in  
1948 after the Assembly rejected a 10-year  
lease agreement on Dec. 22, 1947.

Enrique A. Jiménez was elected pro-  
visional president in 1945 by the National  
Assembly, which later extended his term  
to Oct. 1, 1948. The presidential election  
of May, 1948, was extremely close and the  
subject of heated controversy. The govern-  
ment candidate, Domingo Díaz Arosemena,  
was declared the victor by the national  
election jury on Aug. 7, and he took office  
on Oct. 1. He died Aug. 23, 1949 and was  
succeeded by Daniel F. Chánis, Jr., the first  
vice president. Following a hectic week in  
late Nov., 1949, the national police in-  
stalled Arnulfo Arias as president. He in  
turn was ousted on May 10, 1951, and re-

placed by first vice-president Alcibiades  
Arosemena. José Antonio Remón was  
elected May 11, 1952, took office Oct. 1.

**GOVERNMENT.** Under the 1946 constitu-  
tion, the Assembly and the president are  
elected for 4-year terms, with the presi-  
dent ineligible to succeed himself. Panamá  
has no army or navy, but has a national  
police corps numbering 2,000.

**SOCIAL AND ECONOMIC CONDITIONS.**  
Although education is free and compul-  
sory between 7 and 15, illiteracy is very  
high in Panamá. In 1951-52, there were  
943 public and private primary schools  
with 114,023 students and 74 public and  
private secondary schools with 19,417 stu-  
dents; the national university at Panamá  
City had 1,728 students.

About five-eighths of the nation is un-  
occupied. A fourth of the population is in  
Colón and in Panamá City, the oldest  
white settlement on the Pacific coast of  
the Americas. In the cities, the lower  
classes are Negro and Negroid, descendants  
of British West Indian laborers on the  
canal. Once literally a pest hole from coast  
to coast, Panamá has been made into one  
of the healthiest of the tropical nations  
through U. S. sanitation methods intro-  
duced by Canal Zone officials.

Bananas are the main agricultural crop;  
others are cacao, tobacco, abacá, rubber,  
rice, coffee and sugar cane, all of which are  
exported, as are cattle, hides and gold. Im-  
ports in 1952 were \$73,557,116; exports,  
\$12,664,526. Chief exports were bananas  
(38%) and cacao (16%). Leading custom-  
ers were the U. S. (84%), El Salvador and  
Guatemala; leading suppliers, the U. S.  
(65%), the Canal Zone and Britain.

The Panama Canal is the country's big-  
gest economic asset. About a third of the  
national income is ordinarily derived from  
the wages of Panamanians working in the  
Canal Zone, or from cash spent by U. S.  
personnel in the Zone. National revenue  
in 1952 totaled \$40,689,753; expenditure,  
\$39,232,318. The public debt on Dec. 31,  
1952, was \$38,290,993.

The main railway is the U. S. Govern-  
ment-owned Panamá Railroad, 47.64 miles  
long, bridging the isthmus from Panamá  
City to Colón. All rail mileage in 1951 to-  
taled 223; highway mileage in that year  
was about 1,100. In recent years many for-  
eign ships have been registered in Panamá  
to escape high labor costs and govern-  
mental regulations in other nations; in  
1952, the merchant marine consisted of  
606 vessels (100 tons and over) of 3,740,451  
gross tons, one of the largest in the world.

Minerals include gold, oil, copper and  
platinum near the Colombian border, but  
transit shortcomings have hampered de-  
velopment. Uranium deposits have been  
reported. Forest resources include ma-

hogany, copaiba, sarsaparilla and ipecacuanha. Pearl fishing is a minor industry.

**TOPOGRAPHY AND CLIMATE.** Panamá, roughly the size of South Carolina, runs east to west for 420 miles from Costa Rica to Colombia, and has a maximum width of 118 miles, with 477 miles of Caribbean coast and 767 on the Pacific. At the narrowest and lowest point, the canal bisects the country. Outlying islands number about 630 in the Caribbean and 116 in the Pacific. Panamá steps up from coastal lowlands, with extremely heavy rainfall, to upland valleys and plateaus covered by dense forest and a few mountain peaks, some volcanic, near the Costa Rican border.

## Paraguay (Republic)

(República del Paraguay)

Area: 154,165 square miles.  
Population (census 1950\*): 1,406,000  
(Paraguayan, 97%; Indian, 3%).  
Density per square mile: 9.1\*.  
President: Federico Chaves.

Principal cities (census 1950\*): Asunción, 204,085 (capital); Encarnación, 40,906 (rail terminus); Concepción, 29,650 (port, Paraguay River); Villarrica, 26,527 (sugar, tobacco).

Monetary unit: Guaraní.

Languages: Spanish (official), Guaraní.

Religion: Roman Catholic (official).

\* Preliminary figures.

**HISTORY.** Paraguay, a landlocked South American country with a good river outlet to the South Atlantic, is about the size of Montana and, more often than not, is under the rule of a dictator-president.

In 1526 and again in 1529, Sebastian Cabot explored the area when he sailed up the Paraná and Paraguay Rivers. Domingo Martínez de Irala, a Spaniard, founded Asunción in 1537 and became the dominant figure in Paraguay for the next two decades. From 1608 until their expulsion from the Spanish dominions in 1767, the Jesuits maintained an extensive establishment in the south and east of Paraguay. In 1811 Paraguay revolted against Spanish rule and became a nominal republic under two consuls, one of whom, Dr. José Rodríguez Francia, ruled as absolute dictator until his death in 1840. His dictator successor, Carlos Antonio López, was succeeded in 1862 by his son, Francisco Solano López, under whose leadership Paraguay lost a good part of its population in a disastrous five-year war with Argentina, Brazil and Uruguay. In the succeeding decades, economic progress was handicapped by revolution, intrigue and corrupt government. Paraguay remained neutral in World War I. Economic and financial exhaustion resulted from the war with Bolivia (1932-35), after which Paraguay was awarded three-fourths of the disputed Gran Chaco region (1938).

General José Félix Estigarribia, elected president constitutionally in 1939, was killed a year later in a plane crash. General Higinio Morínigo took over and held office, despite several abortive revolts and a 6-month civil war in 1947, until June, 1948, when he was ousted. Juan Natalicio González, elected president in the Feb., 1948, elections, took office Aug. 15, but successive revolts on Jan. 30 and Feb. 26, 1949, ousted him and his successor. The leader of the latter revolt, Felipe Molás López, was elected president on Apr. 17, but gave way to Federico Chaves in another internal upheaval on Sept. 11, 1949.

**GOVERNMENT AND DEFENSE.** Since adoption of the 1940 constitution, Paraguay has been a semi-authoritarian republic which elects a president every five years by popular vote, and a one-house Congress on a population basis. There is also a Council of State, somewhat equivalent to an upper house, its members named by the government. The presidentially-appointed cabinet administers the government and is required merely to inform the Congress and Council of its policy.

The army numbers approximately 5,000. Military service is compulsory for two years. For patrolling the Paraguay River, the country's life line, there is a navy of about 1,400 men with four gunboats.

**SOCIAL AND ECONOMIC CONDITIONS.** The illiteracy rate is unofficially estimated at 60 per cent, one of the highest in South America. Education is free and supposedly compulsory. In 1949 there were 186,101 pupils attending 1,262 elementary schools. The University of Paraguay at Asunción had 1,800 students in 1950, and there are several normal and agricultural schools.

The Paraguayans are a homogeneous blend of Spanish, Portuguese and Italian, with considerable Guaraní Indian blood. There are almost no Negroes; the 35,000 to 50,000 uncivilized Indians live mainly in the Chaco. The country is 90 per cent bilingual, with Guaraní dominating over Spanish (the official language) in rural areas.

A well-favored land, Paraguay is predominantly a cattle country, keeping about 3,000,000 head. The soil is fertile and the climate suitable for subtropical crops. The chief cash crop is cotton (acreage: 150,000; 1951 ginned output: 14,000 metric tons); the staple food crop is manioc. Other crops are rice, maize, yerba maté, tobacco, sugar, peanuts and fruits. Oil of petit-grain, an important perfume ingredient, is extracted from the leaves of the bitter orange. Aside from the production of canned meat (about 15,000 tons yearly) and quebracho extract, the manufactures of the country are only slightly developed, but show steady growth.

Exports in 1951 were valued at \$35,100,-

000 and imports at \$33,300,000. Argentina, the U. S. and Britain were the leading customers and also the principal suppliers. Chief exports were timber (21%), cotton (15%) and quebracho extract (13%).

River traffic, the principal means of communication, was monopolized until recently by an Argentine company, but the Paraguayan river fleet is of increasing importance. The Paraguay river is navigable for vessels of 12 ft. draft to Asunción, principal shipping point, and Concepción; and for smaller vessels for its entire length. The Alto Paraná is navigable for larger vessels for almost its whole length. Railway mileage is about 715. In 1952 there were some 600 miles of modern highways.

Domestic air service is furnished by the nationalized Línea Aérea de Transporte Nacional (LATN). Several foreign lines supply international service.

The 1951-52 budget called for expenditure of 171,000,000 guaranies and revenue of 140,000,000 guaranies. The public debt was \$27,000,000 early in 1951.

Paraguay's mineral deposits are small, except for manganese in the near-inaccessible northeast. In the western Chaco, a U. S. oil company has been exploring for oil. Forest resources are considerable, especially in the Chaco. Quebracho—the "Axe-breaker," a wood so heavy that it will not float—is the principal commercial tree. The wood has many uses, from paving blocks to ox-cart wheels. Quebracho tannic extract (production 1951: 44,000 metric tons) is the chief product. Its export is limited by agreement with Argentina, also a heavy producer.

**TOPOGRAPHY AND CLIMATE.** Eastern Paraguay, between the Paraná and Paraguay Rivers, is upland country with the thickest population settled on the grassy slope that inclines toward the Paraguay River. The greater part of the Chaco region, to the west, is covered with marshes, lagoons, dense tropical forest and jungle. In the east, the temperature averages about 81° in summer (December–February) and 64° in winter (May–August). From Asunción, with an annual average greater than 60 inches, the rainfall decreases in the west.

Cuzco, 57,000 (ancient Incan capital); Trujillo, 50,271 (mining).

Monetary unit: Sol.

Languages: Spanish, Quéchuá, Aymará (Indian).

Religion: Roman Catholic.

**HISTORY.** Peru, once part of the great Incan empire and later the major viceroyalty of Spanish South America, is more than three times the size of California. It was conquered in 1531-33 by Francisco Pizarro. On July 28, 1821, Peru proclaimed its independence, but the Spanish were not finally defeated until the Battle of Ayacucho on Dec. 9, 1824. For a hundred years thereafter the Peruvian course was rough. Revolutions were frequent, and a new war was fought with Spain in 1864-66. The dispute with Chile over Tacna and Arica was not finally settled until 1929, and war with Colombia over the Leticia Corridor was narrowly averted in 1931. Major economic development, mostly by foreign capital, began late in the last century. In World Wars I and II, Peru enjoyed cotton and copper booms. General Oscar Benavides became president in 1933 and vigorously set about suppressing popular rights and representative government. He was succeeded in 1939 by President Manuel Prado y Ugarteche.

Peru emerged from 20 years of dictatorship on July 28, 1945, with the inauguration of President José Luis Bustamante y Rivero after the first free election in many years. However, the change to a regime in which political prisoners were freed and the press was free to criticize was soon tempered by factional troubles within the government. As a result, in a cabinet reorganization of Jan. 12, 1947, three members of the leftist APRA party, which had contributed largely to Bustamante's election, were eliminated. The rightist-APRA cleavage came to a head on Oct. 28, 1948, when an army-led rightist revolt headed by Gen. Manuel A. Odría ousted Bustamante. Odría became provisional president on Oct. 31. He was unopposed in presidential elections held July 2, 1950.

**GOVERNMENT AND DEFENSE.** Under the 1933 constitution, Peru elects by popular vote every six years a president, two vice-presidents and a bicameral Congress—a Senate of 47 members and a Chamber of 156 members. The president is ineligible to succeed himself. The cabinet, headed by the prime minister, is presidentially appointed, while Supreme Court judges are elected by the Congress from a presidential list. The central government names the executives of the 24 departments.

Military service is compulsory at the age of eighteen. The army had about 32,000 men in 1950. The air force, with 1,935 men and 90 planes in 1940, received 50 U. S. lend-lease craft in 1942. The 1952 navy

## Peru (Republic)

(República del Perú)

Area: 482,133 square miles.

Population (est. 1951): 8,837,600 (white and mestizo, 53%; Indian, 46%; Asiatic, Negro and others, 1%).

Density per square mile: 18.3.

President: Manuel A. Odría.

Principal cities (est. 1951): Lima, 878,846 (capital); Arequipa, 99,955 (commercial center); Callao, 95,100 (port of Lima);

had 2 old cruisers, 4 destroyers, 4 submarines, 6 frigates and escort craft and smaller units. There are about 10,000 police and civil guards.

**SOCIAL AND ECONOMIC CONDITIONS.** Peru, once the cultural center of Spanish South America, has an illiteracy rate of over 50 per cent. Education between 7 and 14 is free, compulsory and state-controlled. Primary schools numbered 10,333 in 1951 and enrolled 958,128 pupils; 98 state secondary schools had 41,209 students and 148 private secondary schools, some run by religious orders, had 21,023. Five universities had 12,111 students in 1947, including the University of San Marcos, founded in 1551 (oldest in America) with 8,102.

Most Peruvians are of mixed Spanish and Indian blood. The Indians come from three main stocks—Quéchua, Aymará (Colla) and Chuncho. The relatively large Asiatic population numbered 41,945 in 1940; in 1939 there were 22,738 alien Japanese.

Compulsory social security, established in 1936, covers illness, maternity, disability, old age and death; benefits are steadily being extended.

Land under cultivation is estimated at only slightly more than 10 per cent of the total area, with more than 80 per cent of the population being dependent upon agriculture. About one-eighth of the cultivated area in the irrigated coastal valleys of the central region is devoted to cotton, the most important crop (1951 production: 80,000 metric tons). Sugar (1951: 479,500 tons), rice, tobacco and coffee are exported, while wheat, corn, potatoes, beans, barley and quinoa (a grain similar to millet) are subsistence crops. Stock-raising, pursued in the Pacific highlands and the elevated parts of the Amazon slope, supplies most of the country's meat needs, as well as wool, hides and skins for export. Llamas, used as beasts of burden, and vicuñas and alpacas, noted for their wool, are native to Peru. Livestock estimates in 1950-51 showed 2,824,000 cattle, 19,000,000 sheep, 1,100,000 pigs, (1949-50) 1,092,000 goats and (1948) 2,449,746 llamas and alpacas.

Industrialization has been slow. Aside from the copper smelters and oil refineries, the greatest progress has been made in the textile industry, which obtains its raw materials from domestic cotton and wool and from imported silk.

Foreign trade statistics, in millions of soles, are as follows:

	1950	1951	1952
Exports	2,887	3,812	3,686
Imports	2,867	4,239	4,473

Chief exports in 1952 were cotton (33%), sugar (14%) and petroleum and products (7%). Chief suppliers were the U. S.

(56%) and Britain (11%); chief customers, the U. S. (28%), Chile (18%) and Britain (8%). Principal imports are machinery and motor vehicles, foodstuffs (especially wheat), iron and steel manufactures, electrical goods and chemicals.

Highway mileage in 1949 totaled 19,468, of which more than a third is hard-surfaced; the Pan-American highway had a total Peruvian length of 1,818 miles. Railway mileage (1947) was 2,612, much of it over difficult territory. Several airlines supply domestic and international service. There are more than 5,400 miles of navigable tributaries of the Amazon in eastern Peru; the chief Amazon port is Iquitos, 2,653 miles from the Atlantic.

The 1952 budget balanced revenue and expenditure at 2,563,947,250 soles. The public debt on Dec. 31, 1951, was 1,655,000,000 soles. Foreign capital has played a large part in Peruvian economic development.

Peru has vast mineral resources. It ranks fourth in world silver production and mines about 25 per cent of the world's vanadium. But mining is second to agriculture, and nearly all of it is in the hands of foreign capital. Petroleum and copper are the most important, with the latter controlled by the American-owned Cerro de Pasco Corporation, which also accounts for much of the gold and silver output. In 1952, gold production was 140,081 oz.; silver, 17,070,043 oz.; copper (smelter), 22,640 short tons; lead, 53,536 tons; and zinc, 133,028 tons. Petroleum production in 1951 was 16,109,896 barrels; discovery of rich new deposits has been reported.

Peru's mineral production, however, varies greatly from year to year, depending on a variety of conditions. For example, from 1936 to 1939, vanadium production rose from 288 to 1,950 tons.

Forest products include rubber (1950: 1,479 long tons), balatá, raw quinine, vegetable ivory, mahogany, cedar, dye woods and coca, the source of cocaine. An important industry on the outlying islands is the gathering of guano (bird excrement), a valuable fertilizer used almost entirely domestically.

**TOPOGRAPHY AND CLIMATE.** The Andes Mountains divide Peru into three sharply differentiated zones. To the west is the coastland, much of it arid, extending for 50 to 100 miles inland, and 1,400 miles long. The mountain area, with peaks over 20,000 feet high, lofty plateaus and deep valleys, lies centrally. Beyond the mountains to the east is the heavily forested slope leading to the Amazonian plains.

The climate ranges from tropical in the eastern lowlands to arctic among the snow-capped peaks. The coastal area has an average annual rainfall of less than 2 inches and temperatures ranging between

55° and 98°. Temperatures range from 75° to 95° in the humid Montaña, and rainfall between 75 and 125 inches annually.

## The Philippines (Republic)

Area: 114,400 square miles.

Population (est. July 1, 1952): 20,630,600 (Filipino, except [1948] 121,702 Chinese, 6,955 Americans, 1,886 Spanish and 3,319 others).

Density per square mile: 180.3.

President: Elpidio Quirino.

Principal cities (est. 1952): Manila, 1,158,260 (seat of government, chief port); Cebu, 175,950 (seaport); Quezon City, 159,730 (legal, future capital); Basilan, 141,640 (lumber); Bacolod 126,200 (sugar); Zamboanga, 124,710 (seaport).

Monetary unit: Peso.

Languages: English, Tagalog, Bisayan, Spanish, Ilocano, Bicol.

Religions (census 1948): Roman Catholic, 82.9%; Aglipayan (Independent Philippine Catholic), 7.6%; Mohammedan, 4.1%; Protestant, 2.3%; others and no religion, 3.1%.

**HISTORY.** Fernando Magellan, the Portuguese navigator in the service of Spain, discovered the Philippines on March 16, 1521, and 21 years later a Spanish exploration party named the group of islands in honor of Prince Philip, later Philip II of Spain. Spain retained possession of the islands for the next 350 years, although the Moros in the southern islands continued to harass the Spanish troops until 1850.

The Philippines were ceded to the United States in 1899 by the Treaty of Paris after the Spanish-American War. Meanwhile the Filipinos, led by Emilio Aguinaldo, had declared their independence. They continued guerrilla warfare against U. S. troops until the capture of Aguinaldo in March, 1901. By July, 1902, peace was established in all parts of the islands except those inhabited by Moros.

The first U. S. civilian governor-general was William Howard Taft (1901-04). The Jones Law (1916) provided for the establishment of a Philippine legislature composed of an elective Senate and House of Representatives. The Tydings-McDuffie Act (1934) provided for complete Philippine independence in 1946. Under a constitution approved by the people of the Philippines May 14, 1935, the Commonwealth of the Philippines was inaugurated on Nov. 15 under the presidency of Manuel Quezon y Molina, who was re-elected in 1941.

The Philippines were invaded by Japanese troops on Dec. 8, 1941 (Philippine time), and after the fall of Bataan and Corregidor, President Quezon and his government fled to Washington. The Japanese-sponsored "Philippine Republic" received little support from most Filipinos. U. S. forces led by Gen. Douglas MacArthur re-invaded the islands in Oct., 1944, and after

the liberation of Manila (Feb., 1945), Sergio Osmeña, who had succeeded to the presidency on the death of Quezon (Aug. 1, 1944), re-established the government.

Brig. Gen. Manuel A. Roxas y Acuña, who defeated Osmeña in the elections of April, 1946, became first head of the new independent republic, which came into existence on July 4, 1946, as scheduled in the Tydings-McDuffie Act. He died April 15, 1948, and was succeeded by the Vice President, Elpidio Quirino, who pledged continuation of Roxas' domestic program and pro-U. S. foreign policy. He was re-elected on Nov. 8, 1949.

**GOVERNMENT AND DEFENSE.** Under the constitution of 1935 (as amended in 1940), the Philippines have a republican form of government based on that of the United States. Executive power is exercised by the president, popularly elected for a 4-year term and assisted by a cabinet appointed by him. The popularly elected Congress has two houses—the Senate with 24 members and the House of Representatives with 100 members.

The Philippine army has been reorganized and re-equipped with U. S. assistance. An agreement signed March 14, 1947, provided for the establishment, for a 99-year period, of 23 U. S. military, naval and air bases in the islands. A 5,000-man regimental combat team was dispatched to Korea in 1950. A mutual defense treaty with the U. S. was signed Aug. 30, 1951.

**EDUCATION.** In 1948, 3,811,981 pupils were enrolled at 19,116 primary schools and 549,659 pupils were enrolled at 1,328 secondary schools. There were 13 institutions for higher education, including the University of the Philippines, with 53,000 students. Tagalog is the national language but English and Spanish are used throughout the country.

**AGRICULTURE AND INDUSTRY.** Agriculture is the chief industry. Average size of the farms is 10 acres, but there are many large plantations. Rice (palay) is the staple native food cereal, but production (2,830,000 metric tons in 1952) is insufficient to meet home consumption. The Philippines normally produce about half the world copra supply and a large proportion of the abacá (Manila hemp) supply; they are also a leading source of sugar (1951-52: 980,000 metric tons) and sugar products, normally the chief export. Other crops include sisal, kapok, cotton, corn, tobacco, coffee, rubber, cacao, citrus fruits and bananas. In the crop year 1951-52, 743,540 metric tons of copra, 26,670 tons of tobacco and 114,490 tons of abacá were produced. Livestock on Jan. 1, 1952, included 2,439,070 carabaos, the farmers' all-purpose animal, 738,990 cattle, 213,580 horses and 4,442,540 hogs.

Industry had made some progress prior to World War II, but private manufactures were still in their infancy. Industrial establishments suffered serious damage as a result of the war. A start has been made in sugar, rope, cigar, cigarette and furniture factories, lumber and rice mills, and modern factories producing beverages, perfumes, cosmetics and other consumer's goods. Preparation of fine embroideries is an important home industry.

**FOREIGN TRADE.** Statistics of trade, in millions of pesos, are as follows:

	1950	1951	1952
Exports	685.4	831.4	704.8
Imports	712.4	959.0	852.2

In 1952, the chief exports were sugar (27%), copra (25%), abacá (11%), timber and lumber (5%) and coconut oil (5%). Leading customers were the U. S. (67%) and Japan (11%); leading suppliers, the U. S. (72%) and Indonesia (5%). Leading imports were textiles (20%), machinery and vehicles (18%), grain, iron and steel and manufactures, and petroleum and products.

**FINANCE.** Recent data are as follows (in millions of pesos):

	1951-52	1952-53*	1953-54*
Revenue	609.8	571.8	560.5
Expenditure	540.5	635.9	613.4

\* Budget estimate.

The total public debt on June 30, 1952, was 702,948,713 pesos.

**COMMUNICATION.** Transportation facilities suffered especially severe damage during World War II. The inter-island trade—extremely important because of the makeup of the archipelago—is served by vessels licensed for domestic, coastwise and bay and river traffic. The port of Manila has ample facilities for ocean-going vessels. According to *Lloyd's Register*, the merchant marine had 96 vessels (100 tons and over) of 147,585 gross tons in 1952.

Railway mileage (1949) totaled 613, most of which (540 mi.) was on Luzon. Highways totaled 16,300 mi. that year. Air transportation has assumed an important place in inter-island communication.

**MINERALS, FORESTS AND FISHERIES.** The Philippines possess large but relatively undeveloped mineral resources. Most important are gold, silver, iron ore, copper ore, chromite, manganese ore, lead and zinc. Petroleum formations are also known to exist. In 1952, 469,408 ounces of gold, 693,751 ounces of silver, 13,241 metric tons of copper concentrates, 491,150 tons of chromite (refractory), 52,364 tons of chromite (metallurgical), 20,627 tons of manganese, 1,170,350 tons of iron ore and 139,440 tons of coal were mined.

The forest area is estimated at more

than 43,700,000 acres (about 58 per cent of the total area), not including 3,200,000 acres covered with cogon grass, fit for grazing. About 97.5 per cent of the total forest area is government-owned. Lumber production totaled 436,968,629 bd. ft. in 1952 (prelim.); timber, 2,719,112 cu. m.

Of the approximately 1,900 different species of fish, only about 100 kinds are marketed, although a majority are edible. Fish exports are chiefly canned tunas.

**TOPOGRAPHY.** The Philippines are an archipelago of approximately 7,083 islands lying about 500 miles off the southeast coast of Asia and bounded on the west and north by the South China Sea, on the east by the Pacific, and on the south by the Celebes Sea. They extend north and south about 1,152 miles and east and west about 688 miles. The northernmost island, Y'AmI, is 65 miles from Formosa, while the southernmost, Saluag, is 30 miles east of Borneo. Only 466 of the islands have an area of more than one square mile, and only 2,441 have names. The largest islands are Luzon in the north (40,814 sq. mi.), Mindanao in the south (36,906 sq. mi.), Samar (5,124 sq. mi.), Negros (4,903 sq. mi.), and Palawan (4,500 sq. mi.). The islands are the tops of an irregular, submerged mountain chain which is largely of volcanic origin. The plains lying amid the mountains are the most densely populated portions of the islands, except in Cebu, where the people live mostly on the coastal plain. Extensive drainage systems are provided by the numerous short rivers.

**CLIMATE.** The temperature is warm throughout the year, averaging 80°, with only slight variations. Rainfall averages about 90-100 inches annually, with the wettest season occurring from June or July through October. Typhoons, often causing severe damage, originate in the Pacific and strike the islands from the east and southeast before curving north.

## Poland (People's Republic)

### (Rzeczpospolita Polska)

Area: 119,703 square miles.

Population (census 1950): 24,976,926.

Density per square mile: 208.7.

Chairman of State Council: Aleksander Zawadzki.

Premier: Boleslaw Bierut.

Principal cities (census 1950): Warsaw, 650,064 (capital); Łódź, 619,914 (industrial center); Kraków, 330,946 (commercial center); Poznań, 320,294 (farm products); Wrocław (Breslau), 289,734 (former German industrial center).

Monetary unit: Złoty.

Language: Polish (more than 90%).

Religions: Roman Catholic, Jewish, Protestant.

**HISTORY.** A victim of aggression and partition throughout the ages, Poland found

history repeating itself in World War II. Her area was reduced from that of California to that of New Mexico, and her population was cut by 11,000,000. Her people reeled from the combined effects of the cruel German occupation, a severe famine and general postwar instability. Her postwar government was in the hands of a small Communist minority which allowed little democratic opposition. Economic reconstruction has continued at a steady pace, but externally Poland remains subservient to the U.S.S.R.

Little of certainty is known about Polish history prior to the end of the 10th century. Early in the 11th century the Polish king, Boleslaus I (the Brave), ruled over Bohemia, Saxony and Moravia. Mongol invasions in 1241 and 1259 were repelled with accompanying devastation. Meanwhile, the Teutonic Knights were erecting in Prussia a state which included part of Poland and barred the latter's access to the Baltic. The Knights were defeated by Wladislaus II (1386-1434) at Tannenberg in 1410 and became Polish vassals under the Peace of Thorn (1466), by which Poland regained a Baltic shoreline.

Poland reached the peak of its power between the 14th and 16th centuries. The 16th century was marked by a constant growth of power on the part of the lesser nobility with a corresponding weakening of the Crown, which became elective in 1572. In succeeding years, Poles scored many military successes against the Russians and Turks. In 1633, King John Sobieski, a famous military leader, turned back the Turkish tide near Vienna.

These successes did not halt the process of decline which resulted from the lack of strong central authority, and Prussia, Russia and Austria were able to carry out a first partition of the country in 1772, a second in 1792 and a third in 1795-96. For more than a century thereafter, there was no Polish state, but the Poles never ceased their efforts to regain their independence. World War I found them fighting unhappily on both sides.

The independence of Poland was formally proclaimed in Nov., 1918, and Marshal Josef Pilsudski was confirmed in office as President. In 1919, Ignace Paderewski, famous pianist and patriot, became the first premier. Russia attacked Poland in 1920 but the Poles, under Marshal Pilsudski and aided by the French, defeated the invaders. On May 12, 1926, Marshal Pilsudski seized complete power in a coup d'état and ruled the country dictatorially until his death on May 12, 1935, when he was succeeded by Marshal Edward Smigly-Rydz.

Despite a 10-year non-aggression pact signed with Germany in 1934, Hitler attacked Poland on Sept. 1, 1939. Russian troops invaded from the east Sept. 17,

1939, and on Sept. 28 a German-Russian agreement was signed dividing Poland between Russia and Germany. Before leaving Poland, President Ignacy Moscicki resigned, designating as his successor W. Raczekiewicz; the latter formed a government-in-exile in France with Gen. Wladyslaw Sikorski as premier; this government moved to London after France's defeat in 1940. All of Poland was occupied by Germany after the Nazi attack on the Soviet Union in June, 1941. On July 30, 1941, Poland concluded an agreement with the U.S.S.R. voiding all German-Soviet agreements effected after Sept. 1, 1939.

The legal Polish government soon fell out with the Russians, however, and in July, 1944, a Communist-dominated Polish Committee of National Liberation received Soviet recognition. Moving to Lublin after that city's liberation, it proclaimed itself the Provisional Government of Poland on Dec. 31, 1944. After almost six months' negotiations, some of the former members of the Polish Government in London joined with the Lublin government to form the Polish Government of National Unity on June 28, 1945. Great Britain and the U. S. recognized this government on July 5, 1945, and withdrew recognition from the London government.

On Aug. 2, 1945, in Berlin, Prime Minister Attlee, President Truman and Generalissimo Stalin established a new *de facto* western frontier for Poland, along the rivers Oder and Lausitzer Neisse, pending the final peace treaty. On Aug. 16 the Soviet Union and Poland signed a treaty delimiting the Soviet-Polish frontier. Under these agreements Poland was shifted westward. In the east it lost 69,860 square miles with 10,772,000 inhabitants; in the west it gained (subject to final peace conference approval) 38,986 square miles with a pre-war population of 8,621,000.

Democratic participation was negligible in the new government, which had adhered strictly to Soviet foreign policy and pursued a program of internal socialization. The government bloc controlled by the small Communist minority won a sweeping victory in the Jan., 1947, elections, which gave little opportunity to the opposition for campaigning or voting. The Communist and Socialist parties were merged in Dec. 1948. All candidates in elections held Oct. 26, 1952, belonged to the Communist-controlled National Front. In Nov. 1952, Aleksander Zawadzki was elected chairman of the state council under the new constitution, and former president Boleslaw Bierut was elected premier.

**GOVERNMENT AND DEFENSE.** The 1952 constitution is based on that of the U.S.S.R. The supreme organ of state authority is the Sejm, composed of 425 mem-

bers elected for 4 years by all citizens over 18. It elects a state council to act when it is not in session and also elects the council of ministers, headed by the premier, which is the supreme executive and administrative organ.

Poland's army in 1952 numbered about 600,000, including security and frontier defense forces. The navy had 2 destroyers, 4 submarines and some minesweepers and coastal craft.

**SOCIAL AND ECONOMIC CONDITIONS.** In the school year 1951-52 there were 22,-980 primary schools with 3,300,000 pupils. Secondary schools numbered 821 with 325,-000 pupils. The 83 institutions of higher learning, including 8 universities, had 142,-000 students. Education is free and compulsory up to 18.

Poland remains essentially an agricultural country: the areas now under *de facto* Polish administration in the west accounted for 25 per cent of Germany's prewar food production. About 70 per cent of postwar Poland is arable land. Much of it has been divided into small farms under the land reform program. Before World War II, Poland exported large quantities of farm products. Farm lands lost to the Soviet Union were considerably larger in area than those gained from Germany; as a result, recent harvests have barely met domestic needs, even though the population has been reduced 30 per cent.

Agricultural production figures in 1951, in metric tons, included wheat, 2,280,000; sugar beets, 6,900,000; (1950) rye, 6,502,-000; oats, 2,126,000; potatoes, 36,835,000. In Dec. 1950, there were 2,797,000 horses, 7,164,000 cattle, 9,928,000 hogs and 2,194,-000 sheep.

Poland's industrial facilities, although severely damaged during World War II, were not greatly affected by territorial concessions to the U.S.S.R., with the exception of the Lwów area. On the other hand, important German industrial areas, especially Silesia and the city of Stettin, are located in the territories under *de facto* Polish administration. As a result, postwar Poland has a much larger industrial potential. Almost all industries have been nationalized or placed under state control, and a planned economy has been introduced as part of the government's drive to make Poland an industrial nation. Under the impetus of a three-year program of economic reconstruction initiated in 1947, the rehabilitation of Polish industry was relatively rapid. That program was completed ahead of schedule in 1949, and a new six-year program was launched in 1950. Production of crude steel was about 2,790,000 metric tons in 1952.

Foreign trade is largely conducted by government organizations under the terms

of numerous trade agreements with other nations. Statistics, in millions of U. S. dollars, are as follows:

	1947	1948	1949
Exports	245*	534*	619*
Imports	453†	519	633

\* Excluding special coal shipments to the U.S.S.R. valued at \$80,000,000 in each year.

† Including relief, war surplus and reparations shipments valued at \$153,000,000.

In 1948 the Soviet Union supplied 23 per cent of imports, followed by Britain (8%), the U. S. (6%) and Germany (6%). The Soviet Union took 21 per cent of exports, followed by Sweden (13%), Britain (8%) and Germany (8%).

Poland stopped publishing detailed data on foreign trade in 1949. Exports in 1949 were unofficially reported to be divided as follows: coal and coke (46%), other raw materials and semimanufactures (18%), and agricultural products (mainly bacon and ham) and consumer's goods (20%). Major imports were machinery, textiles, chemicals and mineral products.

The 1953 budget estimated revenue at 101,100,000,000 zlotys and expenditure at 97,100,000,000 zlotys. The budget includes the accounts of all administrative and economic units, including schools and hospitals, and is in effect a financial plan of the economy. Under the drastic monetary reform effected in late 1950, prices, wages and taxes were uniformly reduced to 3% of their previous levels, and the zloty was placed at par with the Soviet rouble.

The merchant marine had 139 vessels (100 tons and over) of 278,638 gross tons on June 30, 1952. The principal ports are Gdynia, with one of the largest harbors in Europe, Gdansk (Danzig) and the former German port of Stettin. Transportation facilities and rolling stock suffered heavy damage during World War II—a factor still hampering Poland's economic recovery. There are about 61,000 miles of public highway, 4,800 miles of inland waterways and 15,500 miles of railway.

The acquisition of large coal deposits in German Silesia (estimated at more than 5,000,000,000 tons), combined with much larger reserves in the southwestern region, makes Poland one of the world's leading coal producers. The 1952 output was 82,-000,000 metric tons, a third of which was produced in former German territory. Iron ore deposits are located in the Kielce and Radom districts and in German Silesia. Production in 1948 was 650,000 tons. Zinc and lead ores are located chiefly in Upper Silesia and the volvodships of Kielce and Kraków. Prewar Poland's principal oil-producing areas, Boryslaw-Drohobycz, are in the territory ceded to the Soviet Union; 1951 production was 1,265,000 barrels

(one-third of prewar). Among other deposits, Poland possesses copper, sulfur, chalk, clay, kaolin, marble and granite.

Forests cover 22 per cent of the land, but important wood resources are located in the territory ceded to the Soviet Union, and current production supplies less than half the annual need.

**TOPOGRAPHY AND CLIMATE.** Most of Poland is a plain with no natural boundaries except the Carpathian Mountains on the south and the Oder and Neisse Rivers on the west. Pomerania is traversed by a range of low hills, while south of Gdansk is a maze of marshes, sand dunes and muddy lakes which extend into Polish East Prussia (Mazuria). The central Polish plain, 300 to 450 feet above sea level and intersected by great rivers, lies south of the flat country along the Baltic shore. Southern Poland and Silesia are hilly regions, while on the right bank of the Vistula is the plateau of Lublin.

Poland's climate is dependent upon her proximity to the Baltic and to the Carpathian Mountains. Abundant rainfall (annual average: 22.8 in.) is caused by the predominating western oceanic winds. Snowfall is not heavy, but temperatures below zero are not uncommon, and the rivers are generally icebound for two and a half to three months each year.

## Portugal (Republic)

(República Portuguesa)

Area: 35,413 square miles.

Population (census 1950\*): 8,490,000 (practically all Portuguese).

Density per square mile: 239.7.\*

President: Gen. Francisco Hlgino Craveiro Lopes.

Premier: António de Oliveira Salazar.

Principal cities (census 1940): Lisbon (Lisboa), 1948: 796,227 (capital, seaport); Oporto (Porto), 262,309 (seaport, port wine); Funchal (in Madeira Islands), 54,856 (Madeira wine); Coimbra, 35,437 (university); Setúbal, 35,071 (seaport, sardines).

Monetary unit: Escudo.

Language: Portuguese.

Religion: Roman Catholic.

\* Preliminary figures.

**HISTORY.** Rolling and rugged Portugal is about the size of Indiana and, thanks to the days when its sailors and explorers were among the world's most venturesome, has a colonial empire 23 times the area of the homeland. A traditional ally of Britain, Portugal remained neutral in World War II but gave the Allies the right to use vital island bases in the Atlantic. Politically, Portugal is a virtual dictatorship; opposition is officially suppressed, and many phases of the national life are strictly regimented.

Portugal was part of Spain until it won

independence in 1143 with Alfonso I as the first king. During the long reign of King John I (1385-1433), a great commercial empire was built, largely through the exploratory hobby of the king's son, Prince Henry the Navigator. Bartholomeu Diaz explored Africa's west coast and reached the Cape of Good Hope in 1488. Vasco da Gama rounded the Cape and discovered the water route to India in 1497-99. Portugal's empire reached its crest about 1540, when it embraced the coast of Brazil, east and west Africa, Malabar, Ceylon, Persia, Indo-China and Malaya.

In 1580-81 Spain and Portugal were joined in a personal union under Philip II, of Spain. Portugal revolted in 1640 and set up a new dynasty under John IV, Duke of Braganza, but the country never recovered its position as one of Europe's major powers. In 1806, when Portugal refused to obey Napoleon's orders that all continental ports be closed to British ships, French forces invaded the country but were ousted in 1811 by British and Portuguese forces under the Duke of Wellington. The royal family had fled to Brazil in 1807 but following an uprising at home, the king, John VI, returned in 1821.

Brazil declared its independence in 1822 and John's son, Pedro, became emperor of the new state as Pedro I. In 1832, Pedro I, who had abdicated as emperor of Brazil in 1831, returned to Europe and led an uprising with British assistance in favor of his daughter, Maria II, displacing his younger brother, Miguel I, who had been proclaimed king in 1828. The descendants of Maria's marriage with Ferdinand of Saxe-Coburg ruled Portugal until 1910, when King Manoel II was forced into exile by a republican revolt.

On June 19, 1911, the monarchy was abolished, and a republican constitution was introduced. Portugal proclaimed its loyalty to the British alliance upon the outbreak of World War I, and Portuguese troops fought both in Africa and on the Western Front. There was much internal political instability during and immediately after the war.

On May 30, 1926, a revolution led by the army deposed the president and set up a military dictatorship. General António Oscar de Fragoso Carmona became premier and acting president Nov. 29, 1926, and was elected president on March 25, 1928. Dr. António de Oliveira Salazar, who was appointed finance minister in 1928, founded the organization known as the National Union in 1930 and has been premier and dictator since 1932. His regime, while admittedly opposed to liberal or democratic principles, has brought political and economic stability to Portugal. President Carmona was re-elected in 1935, 1942 and 1949. General elections for members of the Na-

tional Assembly held on Nov. 18, 1945, and on Nov. 13, 1949, were boycotted by the opposition, and the National Union was continued in office. Portugal adhered to the North Atlantic Pact in April, 1949.

President Carmona died April 18, 1951; Gen. Francisco Lopes was elected without opposition to succeed him July 22, 1951.

**GOVERNMENT AND DEFENSE.** Under the constitution of 1933 Portugal is a corporative republic. The president is popularly elected for a term of 7 years; the National Assembly of 150 members for a term of 4 years. There is also a corporative chamber which handles economic, social and some legislative matters; its members are representatives of local autarchies and of the several branches of social activities—administrative, moral, cultural and economic. The Assembly theoretically may overrule the president's veto by two-thirds vote. The president appoints the premier, who in turn selects the cabinet; the latter is not responsible to the National Assembly.

Military service is compulsory; the initial training period is 6 years, but not all those liable for duty are called up. The army numbered about 64,000 in 1951 (including the Portuguese Legion, a volunteer force); the air force had 575 planes in 1949. The navy in 1952 had 5 destroyers, 3 submarines, 8 sloops and several smaller craft. Naval personnel numbers about 7,000.

**SOCIAL AND ECONOMIC CONDITIONS.** Compulsory education was introduced in 1911. Elementary schools in 1949-50 numbered 10,884 with 621,069 students. Secondary schools numbered 43 with 20,085 pupils. Private elementary schools were attended by 58,602 pupils; private secondary schools by 26,405. There were 3 universities (Coimbra, Lisbon and Oporto), with 9,614 students.

Portugal's corporate state has a planned economy in which each producing unit regulates itself in the interest of the nation. Corporate units have been established in agriculture, industry and finance. As an example, the government controls the wine trade by means of a federation of growers and a guild of exporters.

Sixty per cent of Portugal's people are engaged in agriculture. Although wheat is the leading crop, it is insufficient to meet domestic needs, and grain must be imported. One of the world's leading wine-makers, Portugal produces two famous kinds—Port in the vicinity of Oporto, and Madeira in the islands of the same name. In olive oil production, Portugal usually ranks third in the world (production 1951: 82,000 metric tons).

Leading crops in 1952 in metric tons,

were wheat, 572,000; barley, 132,000; oats, 135,000. Wine production in 1952 was about 147,000,000 U. S. gallons (1939-48 average: 241,000,000 gallons).

Livestock in 1948 included 1,000,000 cattle, 4,000,000 sheep and 1,300,000 hogs. Wool production in 1949 was approximately 8,000 metric tons.

Portuguese manufacturing is largely limited to consumer's goods for domestic consumption. Besides the production of porcelain tiles, it includes a sizable textile industry.

Trade statistics, in millions of escudos:

	1950	1951	1952*
Exports	5,334	7,561	6,854
Imports	7,904	9,497	10,058

\* Preliminary.

In 1952, the principal customers were the Portuguese overseas territories (26%), the U. S. (15%) and Britain (12%); chief suppliers, Britain (16%), the Portuguese territories (15%) and the U. S. (14%). In 1951 chief exports were cork (18%), cotton fabrics (12%), wine (9%) and fish, mainly sardines (8%). Leading imports included wheat and flour, ships, industrial machinery, raw cotton and iron and steel.

On June 30, 1952, the merchant marine had 318 vessels (100 tons and over) of 527,960 gross tons. Railway mileage in 1949 was 2,240, and highway mileage was 16,697.

Recent financial data are as follows (in millions of escudos):

	1951	1952*	1953*
Revenue	4,100	5,970	5,121
Expenditure	5,177	5,966	6,352

\* Budget estimate.

The net public debt (Dec. 1950) was 12,337,000,000 escudos.

Mineral resources have not been fully developed, but wolfram, coal, iron ore, copper, manganese, iron pyrites, lead, tin, and other ores are found. The coal output in 1952 was 460,000 metric tons; (1951) iron pyrites, 729,600 tons; tin (ore) 1,450 long tons; lead (smelter), 600 metric tons; wolfram, 2,396 tons; kaolin, 36,638 tons. Uranium deposits have been reported in Portugal.

Portugal is one of the world's leading producers of cork; production in 1950 was 154,342 metric tons. In 1951, 54,523 metric tons of resin and 10,384 tons of turpentine were exported.

The fishing industry is a basic part of the national economy, employing about 40,060 men and 16,496 boats in 1950. Of special importance is the sardine industry centered at Setúbal, south of Lisbon. The total fishery catch in 1951 was 307,455 metric tons.

**TOPOGRAPHY AND CLIMATE.** Portugal occupies a rectangular area about 360 miles long and 140 miles wide in the southwestern part of the Iberian Peninsula. It is crossed by many small rivers, and also by three large ones which rise in Spain, flow into the Atlantic, and divide the country into three geographic areas. The Minho (Miño in Spain) River, part of the northern boundary, cuts through a mountainous area that extends south to the vicinity of the Douro (Duero) River. South of the Douro the mountains slope to the plains about the Tagus (Tejo) River. The remaining division is the southern one of Alentejo.

The Azores, stretching over a distance of 400 miles in the Atlantic, consist of 9 islands divided into three groups, with total area of 888 square miles. The nearest continental land is Cape da Roca, Portugal, which lies 800 miles to the east. The Azores are an important station on Atlantic air routes, and both Britain and the United States established air bases there during World War II. Madeira, consisting of two inhabited islands, Madeira and Porto Santo, and two groups of uninhabited islands, lies in the Atlantic about 535 miles southwest of Lisbon. Total area of the Madeiras is 314 square miles.

Portugal's climate is equable and temperate, but in the deep valleys where the mountains keep out the cool winds from the Atlantic, it is excessively hot in summer. Lisbon, Coimbra and Oporto all have mean temperatures of 80° to 81.5°. Heavy fogs are common along the coast. Rainfall has been as great as 16 feet a year. It is heaviest in the north and on the Serra da Estrella.

#### PORTUGUESE OVERSEAS TERRITORIES

	Area, sq. mi.	Population, census 1950
<b>AFRICA</b>		
Angola (Portuguese West Africa)	487,788	4,145,184
Cape Verde Islands	1,539	147,097
Mozambique (Portuguese East Africa)	297,654	5,732,317
Portuguese Guinea	13,944	508,970
São Tomé and Príncipe Islands	372	62,159
<b>ASIA</b>		
Macao	5	187,772
Portuguese India	1,538	637,846
Timor	7,330	442,378

The status of the Portuguese overseas territories is fixed by the Colonial Act of July 1930 included in the constitution approved March 19, 1933, and revised in 1961. Each territory has a governor or governor general, appointed by the council of ministers for an initial 4-year term and responsible to the minister of overseas

territories at Lisbon. Each territory has financial and administrative autonomy.

**ANGOLA (Portuguese West Africa)—Status:** Overseas territory.

Capital: Loanda (population 141,722).

Governor General: José Agapito da Silva Carvalho.

Foreign trade (1952): exports, 2,751,769,-711 escudos; imports, 2,627,135,027 escudos. Chief exports: coffee (41%), diamonds.

Agricultural products (1952): sugar, 50,-175 metric tons; cotton, 21,404 tons; sisal, 25,100 tons; coffee (exports), 47,711 tons; maize; palm kernels and oil; peanuts; rice.

Minerals: diamonds (1952: 743,302 carats), lignite, copper.

Forest products: beeswax, timber.

Industries: sugar, palm oil, whale oil, fish oil.

Angola stretches along the west African coast for about 1,000 miles from Belgian Congo to the Cunene River. Outside of a coastal plain varying in width from 30 to 100 miles, the area is part of the great African plateau. The Angola coast and the Congo River were explored by the Portuguese in 1482-85, and Loanda was founded in 1576. Agreements concluded with the Congo Free State, Germany and France in 1885-86 (later modified in details) fixed the limits of the province except in the southeast, where the frontier was determined by the Anglo-Portuguese agreement of 1891 and the arbitration award of the King of Italy in 1905. The governor general is assisted by a council of 10 (5 officials and 5 Portuguese nationals).

Angola is primarily an agricultural country. Its varied altitude enables it to produce both tropical and temperate crops. Excellent grazing land exists in many parts of the colony, and there are more than 1,200,000 cattle. Railways total 1,770 miles, and primary roads 21,949 miles. The chief ports are Loanda and Lobito. The great majority of the population are of Bantu-Negro stock, mixed in the Congo district with the pure Negro. Europeans in 1950 numbered 78,903; half-castes, 29,550.

Mean annual temperature at Loanda is 74.3°; the cool season lasts from June to September, the wet from October to May.

**CAPE VERDE ISLANDS—Status:** Overseas territory.

Capital: Praia (population 6,188).

Governor: Carlos Alberto Garcia Alves Roçadas.

Foreign trade (1950): exports, 227,600,-000 escudos; imports, 245,700,000 escudos. Chief exports: salt, preserved fish.

Agricultural products: coffee, millet, castor oil, oranges, hides.

This group of 14 volcanic islands lying off the west African coast was discovered in 1456 by the Venetian captain Alvise Cadamosto, in the service of Prince Henry the Navigator. The island of São Vicente is an important coaling station on the South

American route. The vast majority of the inhabitants are mulattoes (101,498 in 1950) and Negroes (42,487)—descendants of slaves brought to the islands from Africa by early settlers. Public slavery was abolished in 1854, and private slavery in 1876. Europeans in 1950 numbered 3,109.

Summer temperatures are high in the archipelago, ranging up to 90° near the sea. The rainy season lasts from August to October.

**MOZAMBIQUE** (Portuguese East Africa)—Status: Overseas territory.

Capital: Lourenço Marques (population 93,303).

Governor General: Gabriel Maurício Teixeira.

Foreign trade (1952): exports, 1,333,092,000 escudos; imports, 2,182,066,000 escudos. Chief exports: cotton (31%), sisal (13%), copra, sugar.

Agricultural products (1952): cotton (unginned), 27,742 metric tons; sugar, 94,389 tons; copra (exports), 38,399 tons; (1951) sisal, 28,734 tons; tea, 2,960 tons; cashew nuts, vegetable oils.

Minerals: gold, coal, graphite, mica.

Forest products: mangrove bark, timber.

Mozambique, stretching for about 1,430 miles along Africa's southeast coast, was discovered by Vasco da Gama in 1498, although the Arabs had penetrated into the area as early as the 10th century A.D. It was first colonized in 1505, and by 1510 the Portuguese were masters of all the former Arab sultanates on the east African coast. The boundaries with British Central and South Africa were delimited in 1891, and with Tanganyika Territory in 1886 and 1890. By the Treaty of Versailles, following World War I, Portugal was allotted the Klunga triangle, formerly part of German East Africa. One of the four provinces—Manica and Sofala (87,454 sq. mi.)—was held by the Mozambique Company until 1942, when the Portuguese Government refused to renew its charter.

Agriculture is the chief industry. There are many large plantations, some of which are partially mechanized. Stockraising is hampered by prevalence of the tsetse fly.

Ninety-nine per cent of the inhabitants are native Africans of the Bantu Tribes. In 1950 there were 48,213 Europeans and 14,243 Asiatics. There were 1,652 miles of railway and 18,078 miles of road, mostly unimproved. The chief ports are Lourenço Marques and Beira, which is also the port for Rhodesia. The principal river, the Zambezi, divides the colony in half.

The cool season lasts from April to August, and the rainy season from December to March. On the central coast the mean annual temperature is about 85°.

**PORTUGUESE GUINEA**—Status: Overseas territory.

Capital: Bissau (population 5,700).

Governor: Raimundo António Rodrigues Serrão.

Foreign trade (1949): exports, 160,800,000 escudos; imports, 142,200,000 escudos. Chief export: peanuts (44,300 metric tons).

Agricultural products: peanuts, palm kernels, hides, rice.

Forest products: wax, timber.

This area, lying on the west African coast and almost surrounded by French West Africa, was discovered in 1446 by the Portuguese Nuno Tristão and was separated from the colony of the Cape Verde Islands in 1879. It consists of a low-lying coastal region and 60 islands off the coast. The country is undeveloped economically, and most of the natives are farmers. There are no railways, but navigable rivers totaling over 1,000 miles are important trade arteries; there are also about 1,820 miles of roads. About two-fifths of the natives are Moslem; there were 2,254 Europeans in 1950. On the coast, temperature varies between 77° in January and 85° in May. The dry season lasts from December to May.

**SÃO TOMÉ AND PRÍNCIPE**—Status: Overseas territory.

Capital: São Tomé (population 2,605).

Governor: Carlos de Sousa Gorgulho.

Foreign trade (1950): exports, 209,500,000 escudos; imports, 109,100,000 escudos. Chief exports: cacao, coffee, copra.

Agricultural products: cacao, coffee, coconuts, copra, palm oil.

These volcanic islands, lying in the Gulf of Guinea about 150-175 miles off the west African coast, were discovered by the Portuguese in 1471. Most of the early inhabitants were convicts and Jews from Portugal and slaves from Brazil and the mainland, but the bulk of the present inhabitants are Negro contract laborers from the mainland and Cape Verde engaged to work cacao plantations.

**MACAO**—Status: Overseas territory.

Capital: Macao (population 148,456).

Governor: Joaquim Marques Esparteiro.

Chief exports: fish, cement, preserves.

Manufactures: cement, preserves, fire-crackers, vegetable oils, metal products.

Macao comprises the peninsula of Macao and the two small islands of Taipa and Colôane on the south China coast, about 35 miles from Hong Kong. Established by the Portuguese in 1557, it is the oldest European outpost in the China trade, but Portugal's sovereign rights to the port were not recognized by China until 1887, and its boundaries are still not delimited. The port has been eclipsed in importance by Hong Kong, but it is still a busy distribution center, and also has an important fishing industry employing over 40,000 people. It is notorious for its opium trade and gambling houses. Portuguese number about 4,000.

**PORTUGUESE INDIA**—Status: Metropolitan province.

Capital: Panjim (Nova Gôa) (population 12,000).

Governor General: Fernando Quintanilha de Mendonça Dias.

Foreign trade (1947): exports, 50,524,000 escudos; imports, 338,859,000 escudos. Chief exports: fish, spices, copra.

Agricultural products: cashew nuts, coconuts, spices.

Minerals: manganese, salt.

The area consists of Gôa and 3 islands on the Malabar coast of India; Damão and the territories of Dadará and Nagar-Aveli, on the Gulf of Cambay; and Diu, with the continental territories of Gocola and Simbor, on the coast of Gujarat. Gôa, captured in 1510 by the Portuguese, later became capital of the whole Portuguese empire in the east. The native population is largely Hindu.

**TIMOR**—Status: Overseas territory.

Capital: Dili (population 7,000).

Governor: Cesar Maria de Serpa Rosa.

Foreign trade (1949): exports, 13,400,000 escudos; imports, 37,600,000 escudos. Chief exports: coffee, sandalwood, wax, copra.

Agricultural product: coffee (exports 1947: 2,100 short tons).

Forest products: sandalwood, wax.

Portuguese Timor consists of the eastern half of the island of Timor in the Malay Archipelago, with the territory of Ambeno and two neighboring islands. It was first settled by the Portuguese early in the 16th century. In 1859 the island was divided between Portugal and the Netherlands; later boundary adjustments were made in 1904. Fishing and copra manufacture are important; trade is mostly in the hands of Chinese, Malaysians and Arabs. The colony was occupied by Dutch and Australian troops in Dec., 1941, and by the Japanese in Feb., 1942.

## Rumania (People's Republic)

(Republica Populara Româna)

Area: 91,654 square miles.

Population (est. 1951): 16,200,000 (1948: Rumanian, 85.7%; Magyar, 9.4%; German, 2.2%; Jews, 0.9%; others [Turkish, Rumanian, Bulgarian, Gypsy, Ukrainian] 1.8%).

Density per square mile: 176.8.

Chairman of Presidium: Petru Groza.

Premier: Gheorghe Gheorghiu-Dej.

Principal cities (est. 1945): Bucharest, 984,619; census 1948: 1,401,807 (capital); Cluj, 110,956 (Transylvanian industrial center); Jassy, 108,987 (trading center, Moldavia); Timisoara, 108,296 (western commercial center); Ploesti, 105,114 (oil).

Monetary unit: Leu.

Languages: Rumanian, Hungarian, German, Turkish.

Religions (est. 1947): Eastern Orthodox, 81%; Greek Catholic, 9%; Roman Catholic, 7%; others, 3%.

**HISTORY.** In World War I, Rumania joined the Allies and won enough land at the peace conference to double its size. In World War II, Rumania joined the Axis and lost about half its earlier gains. Its

present size is about that of Oregon. Politically, it is dominated by the Soviets.

Most of Rumania was the Roman province of Dacia from about A.D. 100 to 275. From the 6th to the 12th centuries, wave after wave of barbarian conquerors—Vlachs, Bulgars and others—passed over the area. Of the two regions which eventually became Rumania, Walachia was taken by the Turks in 1411, and Moldavia in the 16th century, but both retained semi-autonomy. After the Russo-Turkish War, they went under *de facto* Russian protection in 1774.

The Treaty of Paris following the Crimean War nominally united the two provinces in 1858, and Alexander Cuza was elected Prince of Moldavia and Walachia. In 1866 he was forced to abdicate and was succeeded by Prince Carol of Hohenzollern-Sigmaringen. The Treaty of Berlin recognized Rumania's complete independence in 1878, and in 1881 the principality was elevated to a kingdom. Rumania's spoils from the Second Balkan War in 1913 included the Black Sea province of Dobruja. The following year King Carol I was succeeded by his nephew, Ferdinand. The gains of World War I, making Rumania the largest Balkan state, included Bessarabia, northern Transylvania and Bukovina. The Banat, a Hungarian area, was divided with Yugoslavia.

In 1926 Crown Prince Carol renounced his rights to the throne, and when King Ferdinand died on July 20, 1927, Carol's son, Michael (Mihai) became king under a regency. However, Carol returned from exile in 1930, was crowned King Carol II, and gradually became a powerful political force in the country. On Feb. 10, 1938, he abolished the democratic constitution of 1923. On June 21, 1940, the country was reorganized along fascist lines, and the fascist Iron Guard became the nucleus of the new totalitarian party. On June 27, the Soviet Union occupied Bessarabia and northern Bukovina. By the Axis-dictated Vienna Award of Aug. 30, 1940, two-fifths of Transylvania went to Hungary. On Sept. 4, the king dissolved Parliament and granted the new premier, Ion Antonescu, full power, after which he abdicated and went into exile with his mistress, Magda Lupescu, whom he married in 1947 when she became gravely ill. The first official act of his son, Michael I, was to confirm Antonescu in his status as head of the state and premier. Rumania subsequently signed the Axis Pact on Nov. 23, 1940, and the following June joined in Germany's attack on the U.S.S.R., reoccupying Bessarabia. Following the invasion of Rumania by the Red Army in Aug., 1944, King Michael led a coup d'état which ousted the Antonescu government. The new cabinet, headed by Constantin Sănătescu, included Socialist and Communist

representatives. An armistice was signed Sept. 12 in Moscow.

Sanatescu was replaced on Dec. 6, 1944, by Nicolai Radescu, who in turn yielded on March 6, 1945 to Petru Groza. The latter formed a cabinet made up of members of the National Democratic Front (NDF), a political group formed by Communists, Social Democrats and subsidiary parties. Two opposition members were added to the cabinet Jan. 7, 1946, as one result of the Moscow Conference of Foreign Ministers, and on Feb. 5 the U. S. and Britain recognized Rumania conditional upon the holding of free elections. Elections, held Nov. 19, 1946, resulted in a victory for the Communist-dominated government bloc headed by Groza, who was reappointed premier with an all-NDF cabinet on Nov. 29. Rumania was under complete Soviet political and economic domination. King Michael abdicated on Dec. 30, 1947, and thereafter the nation was declared a "people's republic." Elections held on March 28, 1948, gave 405 of the 414 seats in the National Assembly to the Communist-dominated government bloc.

In a major shakeup, Groza was replaced as premier on June 2, 1952, by Gheorghe Gheorghiu-Dej, Communist-party secretary general. At the same time Ana Pauker, vice premier and foreign minister and once believed the most powerful figure in Rumania, was ousted. The Communist-controlled People's Democratic Front was unopposed in elections held Nov. 30, 1952.

**GOVERNMENT.** The 1952 constitution is based on that of the U.S.S.R. The supreme organ of state authority is the Grand National Assembly of 423 members elected for 4 years by all citizens over 18. It elects a presidium to act when it is not in session and also elects the council of ministers, headed by the premier, which is the supreme executive and administrative organ.

**PEACE TREATY OF 1947.** The Paris peace treaty ratified on Sept. 15, 1947, confirmed the *de facto* cession to the Soviet Union of Bessarabia and northern Bukovina, the return to Rumania from Hungary of northern Transylvania (thus annulling the Vienna Award of 1940) and the cession of southern Dobruja to Bulgaria. In addition, Rumania was required to pay reparations in kind in the amount of \$300,000,000 (reduced to \$225,000,000 by the U.S.S.R. in 1948) to the Soviet Union over a period of eight years. She also was to make compensation in lei to the amount of two-thirds of the original value of Allied property damaged or destroyed in Rumania.

The treaty limited the strength of the Rumanian armed forces as follows: army 125,000 men, navy 5,000 men and tonnage of 15,000, air force 8,000 men and 150

planes. The Soviet Union has the right to maintain line-of-communication troops in Rumania until a treaty with Austria becomes effective. The armed forces are being reorganized and re-equipped with Soviet assistance.

Despite treaty limitations, the total of Rumanian armed-forces personnel was estimated at almost 300,000 in 1951.

**SOCIAL AND ECONOMIC CONDITIONS.** Education is free and compulsory. In 1951 there were 14,000 elementary schools. There are four universities—at Bucharest, Jassy, Cluj and Timisoara. Students numbered 24,000. The state Church, governed by a Holy Synod, is Eastern Orthodox.

Rumania is predominantly agricultural, with about 80 per cent of the population engaged on the soil. In wheat, rye and other grains, it is one of the richest countries of southeastern Europe. The largest acreage is usually devoted to corn (production 1947: 5,279,000 metric tons) and wheat (1948: 2,600,000 tons). Other crops are flax, hemp, fruit, vegetables, potatoes, sugar beets, sunflower seeds, tobacco and grapes. Stockraising is also important. In 1950 there were 4,950,000 cattle, 2,300,000 hogs and (1948) 7,300,000 sheep. Wool production in 1951 was about 10,000 metric tons.

Agrarian reform measures effected in 1945 provided for the distribution of estates over fifty hectares (123.6 acres) in lots of twelve and one-half hectares to each peasant. Collectivization was not included in the program, but all cattle and implements became the outright property of the State, for lease to farmers. Collectivization was started in 1949, but progress has not been rapid.

Rumania is poorly developed industrially. The chief industries—flour milling, brewing and distilling—are directly connected with agriculture. However, the iron, steel, metal and machinery industries expanded considerably after the initiation of the rearmament program in 1935. In 1947 there were 28,295 industrial establishments which employed 462,305 workers. The most important industries are food processing, textile, metal, chemical, wood and paper. All but the smallest business enterprises have been completely nationalized.

Exports in 1948 totaled 32,175,000,000 lei and imports 30,016,000,000 lei. Principal exports are ordinarily petroleum products, cereals and cereal products, wood and wood products. Leading imports are iron and manufactures, machinery and motors, vegetable fibers and products. Postwar trade has been carried on almost entirely under bilateral trade pacts, mostly with members of the Soviet bloc.

The Danube, flowing along the southern border for more than 200 miles, is a highly important commercial artery. Transpa-

ment between seagoing vessels and river barges is made at Galati and Bralla. The Rumanian Sea and River Navigation Company, with one-fourth of its capital furnished by the U.S.S.R. and three-fourths by Rumania, monopolizes river and sea transport. The principle of freedom of navigation on the Danube for all nations was recognized in the 1947 peace treaty but seems unlikely to be implemented. The principal seaport is Constanta.

Railway mileage in 1949 was 7,363; highway mileage in 1945 was 43,163. The Sovrom Civil Aviation Company, under Soviet management but financed equally by the U.S.S.R. and Rumania, has the monopoly for all civil air transport inside Rumania and to the Black Sea.

The 1951 budget provided for revenue of 433,900,000,000 lei and expenditure of 429,900,000,000 lei.

Postwar inflation was severe, and in Aug., 1947, the leu was stabilized at the rate of one new leu to 20,000 old. A second currency reform, effected Jan. 27, 1952, tied the leu to the Soviet rouble and required the exchange of old lei for new lei at varying rates.

By far the most valuable of Rumanian minerals is oil, produced chiefly in the Ploesti region about 35 miles north of Bucharest. In 1950, production was 44,000,000 barrels.

Natural gas from Transylvania is the second most important mineral, coming to 3,300,000,000 cubic meters in 1950. Other important minerals are iron ore (1950: about 395,000 tons), lignite (1950: 3,150,000 tons), copper, gold and silver. The Russo-Rumanian Oil Company controls all former German oil firms and has a monopoly on new exploitation.

Fisheries on the lower Danube and wood production are also important.

**TOPOGRAPHY AND CLIMATE.** The Carpathian Mountains divide Rumania's upper half from north to south and connect near the center of the country with the Transylvanian Alps, running east and west. North and west of these ranges lies the Transylvanian plateau, and to the south and east are the plains of Moldavia and Walachia. In its last 190 miles, the Danube River flows through Rumania only. It enters the Black Sea in northern Dobruja, just south of the border of the Soviet Union.

The Moldavian-Walachian region has hot summers and extreme frosts and blizzards in winter. Variations are less extreme in Transylvania and the Banat. Bucharest's average summer temperature is 72°; winter 27°. In some winters the Danube is ice-bound for as long as three months. Rainfall, heaviest in summer, averages 15-20 inches annually.

## El Salvador (Republic) (República de El Salvador)

Area: 13,176 square miles.  
Population (est. Dec. 31, 1951): 1,949,608 (mestizo, 78%; Indian, 11%; white, 11%).  
Density per square mile: 148.0.

President: Oscar Osorio.

Principal cities (census 1950): San Salvador, 160,380 (capital); Santa Ana, 51,676 (coffee); San Miguel, 26,831 (coffee, henequén).

Monetary unit: Colón.

Language: Spanish.

Religion: Roman Catholic.

**HISTORY AND GOVERNMENT.** El Salvador is the smallest, most densely populated of Central American nations, and the only one without an Atlantic coast line.

Pedro de Alvarado, a lieutenant of Cortez, conquered El Salvador in 1525. The area was administered as part of Guatemala until the general Central American revolution against Spain in 1821. El Salvador struck out as an independent republic in 1839 after the dissolution of the Central American Union. Its story since then has been largely one of revolution and strife.

In Jan., 1931, the first free election in 20 years brought in Arturo Araujo as president. He was overthrown before the year was over. General Maximiliano Hernández Martínez, his successor, remained in power until May, 1944, when a general strike forced his resignation. The next regime, also militarist-led, lasted only five months, and was succeeded March 1, 1945, by a regime headed by Salvador Castañeda Castro, who was ousted Dec. 14, 1948, by a revolutionary junta. Major Oscar Osorio, one of the junta's members, was named president in the March, 1950, elections.

The constitution provides for a president, popularly elected for six years and normally ineligible to succeed himself; also, a one-house legislature of 54 members. The military forces include an army limited to 3,000, a militia, a national guard and a small air force.

**SOCIAL AND ECONOMIC CONDITIONS.** With the second lowest illiteracy rate in Central America, El Salvador provides free and compulsory education; both public and private schools are state-controlled. Primary schools in 1950 numbered 1,920 with 154,000 students; secondary schools numbered 105 with 6,825 students. The national university had 1,144 students in eight colleges.

Mestizos (mixed white and Indian) are the predominant racial group. There are no tribal Indians.

El Salvador is one of the most intensively cultivated countries in Latin America. Coffee, which accounts for 85 per cent of the total exports (1951-52 pro-

duction: 59,000 metric tons) is controlled in volume by a commission of government officials and planters. Cotton is second in importance. Corn, sugar cane, beans, rice, tobacco, cacao, indigo, millet and sisal fiber are other products. There is some cattle raising and a few local factories, including 2 cement plants, 11 textile mills and a modern shoe factory.

El Salvador's largest national enterprise, the Lempa river hydroelectric project, went into partial operation in 1953. Costing \$18,000,000, it has an initial capacity of 45,000 kw and a potential of 75,000 kw.

Exports in 1952 totaled 218,300,000 colones; imports, 169,400,000 colones. About 75% of the trade is with the U. S.

The two railways have 385 miles of track. Highways (1952) included paved, 323 miles; gravel, 320 miles; dirt, 1,250 miles.

The 1953 budget balanced revenue and expenditure at \$56,600,000. The foreign debt on Dec. 31, 1952, was \$8,400,000; there is no internal debt.

Gold, silver, coal, copper, iron, zinc, mercury and sulfur are the nation's chief minerals. Gold production in 1951 totaled 27,100 ounces; that of silver, 351,800 ounces.

Forest resources, much smaller than in other Central American states, include dyewood, mahogany, cedar and walnut. El Salvador is a leading source of balsam.

**TOPOGRAPHY AND CLIMATE.** Most of El Salvador is a fertile volcanic plateau about 2,000 feet high.

There are several volcanoes, some still active, and many lovely crater lakes. The mountain ranges along the borders of Guatemala and Honduras give the highlands an almost temperate climate, but the lowlands are often hot and sultry. Temperatures at San Salvador range from about 59° (average daily low) in January to 85° (average daily high) in December; these are the two coolest months. The rainy season lasts from May to October.

## San Marino (Republic)

Area: 38 square miles.

Population (est. 1951): 12,969 (mostly Italian).

Density per square mile: 341.3.

Executive: two regents selected every six months by the Grand Council.

Principal town: San Marino (est. pop. 2,000) (capital).

Monetary unit: Lira.

Language: Italian.

Religion: Roman Catholic.

San Marino, the oldest and smallest republic in the world, is one-tenth the size of New York City. It is entirely surrounded by Italy, in the Apennines near

Rimini. According to tradition, San Marino was founded about A.D. 350 and had good luck for centuries in staying out of the interminable wars and feuds on the Italian peninsula. The Pope recognized its independence in 1631.

San Marino hires its police and judges from Italy. It no longer confers titles for a consideration, but it does derive much revenue from the exporting of its postage stamps, which are changed often to keep philatelists buying. Other exports are barley, wine and cattle, as well as building stone from Mount Titano.

Executive power is exercised by regents, two of whom are appointed every six months from the popularly-elected Grand Council. There are several primary schools and a high school.

San Marino is linked with Rimini on the Adriatic by a 20-mile electric railway.

## Siam. See Thailand

## Spain (Nominal Monarchy)

(España)

Area: 194,945 square miles.

Population (est. Dec. 31, 1952): 28,416,513 (Spanish, Basque, Catalan).

Density per square mile: 145.8.

Chief of State: Francisco Franco y Bahamonde.

Principal cities (est. 1952): Madrid, 1,686,108 (capital); Barcelona, 1,324,175 (chief port, textiles); Valencia, 521,614 (silk, oranges); Sevilla (Seville), 391,047 (wines, iron ore); Málaga, 284,554 (seaport); Zaragoza (Saragossa), 269,710 (rail center).

Monetary unit: Peseta.

Languages: Spanish, Basque, Catalan.

Religion: Roman Catholic.

**HISTORY.** Spain, twice the size of Oregon, was once one of the world's great powers. From 201 B.C. to A.D. 406, it was part of the Roman Empire. Then the Goths and the Vandals formed a powerful kingdom, which was partially conquered in the 8th century by the Moors from Africa. The last Moorish stronghold, the kingdom of Granada, fell to the forces of King Ferdinand and Queen Isabella, who were trying to unify Spain, in 1492. In the same year, the Spanish-financed explorer Christopher Columbus was discovering the new world for the Spanish crown.

Charles V (1516-55) became King of Spain and also Holy Roman Emperor. Under his son, Philip II, Spain reached the peak of its power, but the beginning of decline set in with Britain's defeat of the "Invincible" Armada in 1588.

The line of Spanish Hapsburgs ended in 1700, and the War of the Spanish Succession followed. By the Treaty of Utrecht

(1713) Spain was forced to accept a Bourbon king, the Duke of Anjou, and lost Gibraltar and all holdings in the Netherlands and southern Italy. Then, while the Spaniards were resisting Napoleon's efforts to establish a Bonaparte line in Spain, most of their colonies in America revolted and became independent. The loss of Cuba, Puerto Rico and the Philippines in the Spanish-American War of 1898 left Spain with only a few scattered possessions in Africa. Neutrality was maintained during World War I.

From 1923 to 1930 Spain was a military dictatorship under General Miguel Primo de Rivera. A wave of republicanism in 1931 forced the abdication of King Alfonso XIII, and a new constitution was drawn declaring Spain to be a workers' republic. Several revolts, strikes and shifts of government kept Spain in political chaos, and on July 18, 1936, the army revolt led by General Francisco Franco burst into civil war. While Hitler and Mussolini helped Franco, Russia helped the Loyalist side. The last Loyalist forces surrendered on March 29, 1939. Spain became a dictatorship under Franco and signed the anti-Comintern pact in 1939.

While Franco shied away from the risk of becoming a belligerent in World War II, he was pro-Axis in sympathy, helped the Axis with supplies, intelligence and services to German U-boats, and even sent the Spanish Blue Division to fight Russia.

Meanwhile, monarchist sympathies remained strong both in and out of Franco's Falange party, and a Spanish Republican "Government-in-exile" was formed in 1945.

In 1961, the United States made a preliminary agreement for wartime use of Spanish naval and air bases in return for U. S. military and economic aid. On July 19, Franco announced a new cabinet with greater monarchist representation.

**GOVERNMENT.** Franco is head of the state, national chief of the Falange party, prime minister and *caudillo* (leader) of the empire. Practically, the country is ruled by the cabinet (appointed by Franco), the National Council of the Falange party and, to a lesser extent, the Cortés (parliament). The principal function of the Cortés is the planning and formulation of laws without prejudice to Franco's veto power. Cabinet ministers, party officials, civil governors, university heads, and the presidents of learned bodies become members of the Cortés ex-officio. There is no provision for the introduction of legislation by any of the members.

In a referendum held July 6, 1947, the Spanish people approved a Franco-drafted succession law declaring Spain a monarchy again. Franco, however, is to continue as chief of state and upon his death or incapacity the Government and a Council of

the Realm constituted by the law are to nominate as king "that person of royal blood who is most qualified by right," subject to the approval of the Cortés. The law reserves to Franco the right to nominate his own successor, subject also to the Cortés approval by two-thirds vote.

**DEFENSE.** Franco is commander in chief of the army, navy and air force, each administered by a cabinet minister responsible to him. Military service is compulsory for two years. The standing army is estimated at 425,000 men. The navy in 1953 had 6 cruisers, 20 destroyers, 6 submarines, 12 frigates and escort vessels and many smaller vessels. Several destroyers and smaller vessels were under construction. The budgetary allotment for defense is about 40 per cent.

**EDUCATION, RELIGION AND SOCIAL POLICIES.** The illiteracy rate was 20.8 per cent in 1947. Primary education is compulsory and free; religious instruction is permitted. In 1948 there were 55,111 public primary schools with 2,063,646 pupils, 119 secondary schools with 213,818 students, 53 normal schools (1949) with 24,171 students, and 12 universities with 41,844 students.

Roman Catholicism is the established religion. After the civil war of 1936-39, the church was restored to substantially its pre-republican position; confiscated property was returned, religious education was reintroduced, and divorce was banned.

The labor charter promulgated March 9, 1938, defined Spain as a totalitarian and syndicalist state. So-called vertical syndicates have supplanted all union organizations and all other organizations for the protection of the economic interests of productive groups. A branch of production extends "vertically" from the raw material stage through the industries and firms engaged in processing and marketing. Prices, wages and production, and the distribution of merchandise are controlled.

**AGRICULTURE.** Spain is predominantly agricultural, although there are extensive non-arable areas. The principal land uses, apart from forest, pasture and forage crops, are the production of grain, potatoes, pulse, sugar beets, oranges, grapes and olives. Since the civil war Spain has not recovered balance in production and consumption of foodstuffs. Normally, Spain produces exportable quantities of oranges, lemons, almonds, filberts, raisins and other subtropical commodities. Wine production in 1952 was about 530,000,000 U. S. gallons; olive oil, 247,800 metric tons.

Livestock, also important, included in 1950, 4,200,000 cattle, 26,000,000 sheep and (1951) 4,222,000 goats and 2,670,000 hogs. Wool production in 1951 was 27,000 metric tons, clean basis.

### PRINCIPAL CROPS

(thousands of metric tons)

	1950	1951	1952*
Wheat	3,380	4,266	4,085
Barley	1,500	2,151	2,228
Rye	560	514	493
Oats	500	551	547
Maize	610	607	635

\* Provisional.

TRADE. Statistics of foreign trade are as follows, in millions of U. S. dollars:

	1950	1951	1952
Exports	389	462	404
Imports	390	384	518

In 1951 the chief customers were the Spanish colonies (18%), Britain (16%) and the U. S. (14%). Leading suppliers were the Spanish colonies (16%), the U. S. (16%) and France (10%). Leading exports were oranges (16%), cotton goods (10%), olives and olive oil, wine and chemicals (each 7%). Major imports were raw cotton, chemical products (especially fertilizer), wheat, petroleum and tobacco.

INDUSTRY. The textile industry, concentrated in Catalonia and normally employing over 300,000 workers, leads all others. The paper and chemical industries are also important. Pig iron production in 1952 was 761,100 metric tons; steel production, 907,300 tons. On Mar. 31, 1953, 71 vessels of 121,067 gross tons were under construction. COMMUNICATIONS. The merchant fleet, which suffered severely during the civil war and World War II, comprised 1,089 vessels (100 tons and over) of 1,215,819 gross tons on June 30, 1952, according to *Lloyd's Register*. The highway system is about 80,000 miles. In 1950, there were 11,068 miles of railway.

FINANCE. Recent data (budget estimates) are as follows, in millions of pesetas:

	1949*	1950-51†	1952-53†
Revenue	16,071	17,847	22,208
Expenditure	16,629	17,941	22,477

\* Actual. † Data are for each year in indicated biennial budgetary period.

The public debt on Dec. 31, 1952, was 71,544,000,000 pesetas, including treasury bonds and guaranteed obligations.

MINERALS. Spain's mineral wealth, second to agriculture in the national economy, yields millions of tons of ore. In 1946 the mining and metallurgical industries employed 250,115 workers; output was valued at 8,422,251,768 pesetas. Following are production figures for 1952, in metric tons: coal and lignite, 13,632,000; iron ore, 2,981,000; lead ore, 67,600; zinc ore, 153,600; potash ore, 964,400; mercury (1951), 1,533. Spain also produces copper, gold, magnesite, sulfur, tungsten, phosphates, silver and, reportedly, uranium.

FORESTS AND FISHERIES. Spanish forests yield lumber, pine resins, cork and

esparto. Some 100,000 persons work in the fishing, canning and related industries. The 1952 catch, principally cod, tunny and sardines, was 501,100 metric tons, valued at 2,481,300,000 pesetas.

TOPOGRAPHY. Spain, less than ten miles from Africa at the closest point, and separated from France by the Pyrenees, is generally a broad plateau sloping to south and east and crossed by a series of mountain ranges and river valleys. Most of the coast line is steep and rocky, with few indentations. The best harbors are on the Galician coast in the north; the broadest coastal plain is on the Gulf of Cádiz in the southwest. The Guadalquivir River in the south is navigable to Sevilla, but most of the others are mountain streams useful only for waterpower. Hydroelectric stations account for 75 per cent of Spain's generating capacity.

CLIMATE. Most of Spain's weather is extreme. Madrid, for example, reaches a high of 110° and a low of 10°. In the southeast, the protection of the Sierra Nevadas makes the climate subtropical. The northeast, with climate much like that of the British Isles, is the only region with normal rain.

OUTLYING ISLANDS. Off Spain's east coast in the Mediterranean are the Balearic Islands, which total 1,936 square miles. The largest is Majorca (1,405 sq. mi.). Sixty miles west of Africa are the Canary Islands (2,804 sq. mi.).

### SPANISH COLONIAL POSSESSIONS

Country	Area, sq. mi.	Population, est. 1951
Ceuta, Melilla, Alhucemas, Chaffarinas, and Peñon de Velez	82	141,000
Spanish Morocco	7,589	1,200,000
Southern Zone	10,039	20,000
Spanish Guinea	10,900	175,000
Western Sahara, including Iñi and Spanish Sahara	116,200	81,000
Spanish Morocco. See Morocco		

### Sweden (Kingdom)

(Sverige)

Area: 173,341 square miles.

Population (est. Dec. 31, 1952): 7,150,606 (practically all Swedish).

Density per square mile: 41.2.

Sovereign: King Gustavus VI.

Prime Minister: Tage Frihof Erlander.

Principal cities (est. Dec. 31, 1952): Stockholm, 761,787 (capital); Göteborg, 363,000 (chief port, shipbuilding); Malmö, 198,645 (seaport); Norrköping, 87,451 (textiles); Hålsingborg, 71,999 (seaport).

Monetary unit: Krona.

Language: Swedish.

Religions: Swedish Lutheran, 99%; others, 1%.

HISTORY. Although ancestors of today's Swedes lived in the area as long as 5,000

years ago, little is known of Sweden before the 10th century. Before 1100, King Olaf Skötkonung had united Sweden into a strong nation and established Christianity. In 1397 Sweden was united with Norway and Denmark under the Union of Kalmar. After the murder of several prominent Swedes by Christian II of Denmark in 1520, Sweden revolted under the leadership of Gustavus Vasa. Gustavus, elected king in 1523, founded the modern Swedish state and was the first European monarch to break relations with the Pope.

By the Treaty of Westphalia (1648) which concluded the Thirty Years' War (during which Gustavus Adolphus scored a number of brilliant military successes), Sweden acquired important German areas, including large portions of Pomerania. In 1700, Poland, Denmark and Russia united against Sweden. When peace was finally concluded in 1721, Sweden gave up Livonia, Estonia, Ingria and parts of Finland. Sweden participated in the coalition against Napoleon (1805-07) but in 1809 Finland was lost to Russia. Following the ouster of King Gustavus IV in 1809, a constitutional law still in effect was adopted, after which Charles XIII, uncle of Gustavus IV, was elected king. Since Charles XIII was childless, one of Napoleon's marshals, Jean Bernadotte, was elected Crown Prince and took over effective control of the government, succeeding to the throne in 1818 as Charles XIV. By the Treaty of Kiel (1814), Sweden acquired Norway from Denmark in return for Pomerania. The union with Norway lasted until 1905, when it was peacefully dissolved.

Neutrality was maintained through both World Wars. In 1936 Per Albin Hansson formed a Social Democratic ministry which gave way on Dec. 12, 1939, to a national coalition cabinet under his leadership. On July 31, 1945, another wholly Social Democratic cabinet was formed by Hansson, who died in 1946 and was succeeded as prime minister by Tage Fritiof Erlander.

Refusing to abandon its neutrality, Sweden did not join the North Atlantic Pact in 1949. Anti-Soviet feeling grew intense in 1952, however, when Russians shot down a Swedish plane over the Baltic.

**SOVEREIGN.** Gustavus VI, born Nov. 11, 1882, married (1) 1905, Princess Margaret Victoria (born 1882, died 1920); (2) 1923, Princess Louise Mountbatten (born 1889). To his first marriage was born Prince Gustavus Adolphus (born Apr. 22, 1906, killed in air crash Jan. 26, 1947), who was married in 1932 to Sibylle, Princess of Saxe-Coburg-Gotha; their offspring include a son, Carl Gustavus, the heir apparent, born April 30, 1946, and four daughters. Gustavus VI became king Oct. 30, 1950, on the death of his father, Gustavus V, who had reigned since 1907.

**GOVERNMENT.** Sweden is a limited monarchy. Executive and judicial authority is vested in the king alone, but his resolutions must be taken in the presence of the Council of State (cabinet), headed by the prime minister; the Council is appointed by the king but is responsible collectively to the Riksdag (parliament).

The Riksdag has an upper chamber of 150 members elected indirectly by the provincial and municipal councils for eight years, one-eighth being renewed each year. The lower chamber of 230 members is directly elected by popular vote for four years. There is universal suffrage for men and women over 21. The king has the right to initiate legislation and has an absolute veto over all bills except those relating to taxation.

Standings in the lower chamber (elections of Sept. 21, 1952): Social Democrat 110, Liberal 59, Conservative 31, Agrarian 25, Communist 5.

**DEFENSE.** Military service is compulsory from the ages of 20 to 47; the initial training period is 15 months. The king is commander in chief of all the armed forces. The army, numbering about 60,000, with a trained reserve of 600,000, is well-equipped with the latest type weapons, many of them developed in Sweden. The air force has 600 planes. The navy on Jan. 1, 1953, had 4 cruisers, 3 coast defense ships, 12 fleet destroyers, 9 escort vessels, 24 submarines, 2 minelayers and numerous smaller craft. Naval personnel numbers about 10,000 in addition to coast artillery, under naval jurisdiction.

**EDUCATION.** Public elementary education has been free and compulsory since 1842. In 1951 there were 650,000 pupils in regular elementary schools as well as 143,179 pupils in regular secondary schools. The two universities—Uppsala and Lund—and four other schools of university grade had a total enrollment of 11,142 in 1950. The state also provides a large number of special vocational and continuation schools. The national church is the Swedish Lutheran Church, of which the king is supreme administrator.

**SOCIAL WELFARE.** The extremely well-developed co-operative movement is a powerful factor in the country's economic life. The co-operatives account for about 10 per cent of the total retail trade and more than 20 per cent of the grocery business. Social legislation, also well-advanced, includes unemployment relief, loans and grants for housing, medical care, care of the indigent and the aged, and a public works program to curtail unemployment.

**AGRICULTURE.** Grain, hay, potatoes and sugar beets are products of the broad fertile plains of the south; cattle raising and dairy farming predominate in the north.

Production of major crops in 1952 was as follows, in metric tons: wheat, 782,000; rye, 284,000; corn, 329,000; oats, 814,000; mixed grain, 896,000; sugar beets, 1,597,000; potatoes, 1,839,000. The 1952 livestock census showed 386,000 horses, 2,532,000 cattle, 256,000 sheep and 1,363,000 hogs. Butter production in 1952 was 93,585 metric tons; cheese, 59,975 tons; milk, 4,568,000 tons.

**INDUSTRY.** Industrial establishments in 1949 numbered 17,289 with 806,800 workers. The highly specialized machine industry produces separators, motors, electrical machines and apparatus, agricultural machinery, ball bearings, telephone equipment and harbor works. Pig iron production in 1952 totaled 1,051,000 metric tons; raw steel, 1,666,000 tons.

There are also large woolen, glass and porcelain industries. Shipyards build for both Swedish and foreign fleets; 54 vessels of 346,855 gross tons were under construction on March 31, 1953. The timber and woodworking industries are extensive. The match industry is a single trust which covers the whole world and, with the help of British and American capital, monopolizes production in many countries.

**TRADE.** Statistics of foreign trade are as follows, in millions of kronor:

	1950	1951	1952
Exports	5,708	9,226	8,087
Imports	6,117	9,192	8,953

Leading exports in 1951 were wood pulp (28%), machinery and vehicles (16%), paper and manufactures (14%) and wood and manufactures (12%). Leading customers were Britain (19%), Germany (11%), France and Norway (each 6%) and the U. S. and the Netherlands (each 5%). The chief suppliers were Britain (16%), Germany (14%), the U. S. (9%) and Belgium (6%).

**COMMUNICATIONS.** On June 30, 1952, the merchant marine comprised 1,266 ships (100 tons and over) of 2,331,837 gross tons, largely efficient motor vessels. The highly developed railway network totaled 10,250 miles in 1951, and there were about 56,200 miles of highway, mostly improved. By means of ferry steamers, Swedish state railways are connected directly with both Germany and Denmark. Telephones in 1952 numbered 1,790,000 (252 per 1,000 persons), making the telephone system second only to the United States on a per capita basis. Airlines flew approximately 180,000,000 passenger-miles in 1952.

**FINANCE.** Recent data are as follows, in millions of kronor:

	1951-52	1952-53*	1953-54*
Revenue	7,507	8,391	8,159
Expenditure	6,423	7,663	8,188

\* Budget estimate. *NYT* 818 89.

The public debt was 12,710,000,000 kr. on Dec. 31, 1952.

**MINERALS.** Sweden's high-grade iron ore deposits are among the world's richest. Those in central Sweden produce principally for domestic use, while the ones in Lapland to the north are worked largely for export, with much of the output being shipped through the Norwegian port of Narvik. Production in 1952 was 16,951,000 metric tons. Gold production was 138,000 troy oz. Other major minerals are copper (29,204 tons), lead (11,390 tons), arsenic ore (67,000 tons), manganese ore (18,877 tons), pyrite ore (411,000 tons), zinc ore (67,000 tons) and silver (595,000 oz.). Coal production (500,000 tons a year) is comparatively small; imports of nearly 8,000,000 tons a year are therefore necessary. Deposits of uranium have been reported in Sweden.

Wood and peat are extensively used as fuel. Sweden's many waterfalls have a potential of 13,000,000 kw, of which 3,500,000 kw had been developed by 1951. The largest hydroelectric works are state-owned.

**FORESTS AND FISHERIES.** About 60 per cent of Sweden is forested, mostly in pine, and there are vast forest products industries in the north. Sweden supplies a large percentage of the world's mechanical and chemical pulp. In 1951, 3,367,000 metric tons of wood pulp, 791,000 tons of paper, 176,000 tons of cardboard and 333,000 tons of newsprint were produced.

The average annual catch of fish is about 140,000 tons, half of it in small Baltic herring. Cod, mackerel and sprat also are taken in the Baltic, and the inland lakes and rivers are well stocked with salmon, trout and perch. The catch in 1952 (sea and coast fisheries) was 203,000 metric tons, valued at 125,000,000 kr.

**TOPOGRAPHY.** Sweden, with extreme length of about 990 miles and breadth of 250 miles, slopes eastward and southward from its peak elevation in the Kjölen mountains along the Norwegian border. In the north are mountains and many lakes. To the south and east are central lowlands, and south of them are fertile areas of forest, valley and plain. Along Sweden's rocky coast, chopped up extensively by bays and inlets, are many islands, the largest of which are Gotland (1,220 sq. mi.) and Öland (519 sq. mi.). The country is landlocked to the north.

**CLIMATE.** Sweden's climate is diversified. The warmest month is usually July, with a mean temperature of 62° in Stockholm. February is the coldest month, with a mean average below 32° for all Sweden (25.7° at Stockholm). Average annual rainfall in the north is 16.5 inches; in the south, 22.5 inches.

## Switzerland (Republic)

(Schweiz-Suisse-Svizzera)

Area: 15,940 square miles.

Population (est. Dec. 1952): 4,850,000 (Swiss, 91.2%; German, 3.6%; Italian, 3.1%; French, .9%; others, 1.2%—figures by place of birth).

Density per square mile: 304.3.

President (1953): Philipp Etter.\*

Principal cities (est. Dec. 1952): Zürich, 404,000 (textiles, banking); Basel (canton), 202,500 (rail center, Rhine port); Geneva, 152,500 (Intellectual center); Bern, 152,000 (capital).

Monetary unit: Swiss franc.

Languages: German, 71.9%; French, 20.4%; Italian, 6.0%; Romansch, 1.1%; others, .6%.

Religions: Protestant, 57%; Roman Catholic, 41%; Jewish, .4%; others, 1.6%.

\* The vice president ordinarily becomes president the next year. Vice president in 1953: Rodolphe Rubattel.

**HISTORY.** Switzerland, twice the size of New Jersey, is a tourist mecca, but its rugged scenery is more than a commercial asset. Europe's aggressors for centuries, right up through World War II, have usually left Switzerland in peace, largely because of its formidable natural barriers.

Swiss history is principally the story of the drawing together of various fiefs of the Holy Roman Empire into a single union for common defense. The process began in 1291, with the cantons of Uri, Schwyz and Nidwalden as the nucleus. Over the next 300 years, ten new cantons entered the federation, which nominally remained part of the Holy Roman Empire until the Treaty of Westphalia gave it independence in 1648.

The French revolutionary army succeeded in occupying Switzerland in 1798 and organized it as the Helvetic Republic, but Napoleon restored the federation in 1803. The Congress of Vienna (1815) declared Switzerland an independent, neutral state in perpetuity, and fixed the nation's borders as they exist today. Out of the brief Swiss civil war of 1847 came the democratic constitution of 1848, which was influenced by the U. S. constitution.

Switzerland maintained strict neutrality in World Wars I and II, during which its diplomatic delegations represented the interests of many of the belligerents. Both sides bombed several Swiss cities by mistake in World War II. Switzerland was a center of both Axis and Allied espionage and counter-espionage during the war.

**GOVERNMENT AND DEFENSE.** Since the adoption in 1874 of their present constitution, the Swiss have had a federation of 22 sovereign cantons. Each canton has its own legislature, executive and judiciary departments, with the right of veto over federal legislation through referendum.

The Federal Assembly has two houses—a Council of States of 44 members, two

from each canton, and a National Council of 196 members elected for four-year terms. The seven members of the cabinet (Federal Council) are elected for four years by the Federal Assembly, which also elects the Swiss president from among its own members for a period of one year. The federal government is supreme in matters of war, peace and treaties, and regulates the army, railroads, postal service, mints and national bank note issues.

In peacetime, the highest Swiss army officer is a colonel. In wartime a commander in chief is named with rank of general. Since the army is a national militia, it maintains no standing forces, but military service is compulsory from the ages of 18 to 60, with an initial training period of about three months and an 11-day refresher course once a year. The force of men trained and physically fit is about 650,000. The air force has about 5,000 personnel and 400 planes.

**SOCIAL AND ECONOMIC CONDITIONS.** Primary education is compulsory, free and locally controlled. In 1948-49, primary schools had 434,498 pupils and secondary schools had 78,537. There are seven universities, with 14,903 students in 1949-50.

Religious freedom is guaranteed under the constitution. German, Italian and French were recognized as national languages in 1874, and Romansch, a dialect of the Alpine regions, was also made official in 1937.

With nearly a fourth of its land unproductive, and with half of it in pasture or forest area, Switzerland is dependent on imports for food supply. Wheat, potatoes, fruits, oats, barley, rye, sugar beets and grapes are grown, but stockraising and dairy farming account for three-fourths of the agricultural production. In 1952 there were 1,682,000 cattle, 190,000 sheep, 1,007,000 hogs and (1950) 180,000 goats.

Production of cheese in 1951 was 24,000 metric tons, and of butter (1952) 21,700 metric tons. Approximately 20 per cent of the population is engaged in agriculture. Total value of agricultural production in 1950 was 2,242,300,000 fr.

Manufacturing is the principal economic activity, with more than 40 per cent of the population being sustained by manufactures or mechanical pursuits. Industry is conducted largely in small plants using highly skilled workers. Almost all the raw materials are imported, and products consist almost exclusively of high grade, expensive commodities. In 1950 there were 11,568 factories, with 492,563 workers.

Manufactures include chemical products, machines, watches, textiles, aluminum, precision instruments, lumber, shoes and fine handmade embroidery. Chief agricultural industries are the manufacture of

fine cheeses and condensed milk. With its many scenic attractions, Switzerland draws the heaviest and most profitable tourist trade in Europe.

Switzerland is dependent on foreign trade for its prosperity. Trade statistics are as follows, in millions of Swiss francs:

	1950	1951	1952
Exports	3,911	4,690	4,748
Imports	4,536	5,911	5,193

In 1952, the leading customers were the U. S. (15%), Germany (10%), Italy (9%), France (7%) and Belgium (6%). Leading suppliers were Germany (18%), the U. S. (17%), France (11%), Italy (7%) and Britain and Belgium (each 6%).

The leading exports in 1952 were clocks and watches (23%), machinery (21%), textiles, including apparel (14%) and chemicals (13%).

The Rhine, navigable from Basel to the North Sea, is the principal inland waterway. Railways built over rugged terrain, entailing construction of many bridges and tunnels, total about 3,350 miles, mostly electrified. The railroads are of great strategic importance in communications between Germany and Italy. Road mileage totals about 10,500. State aerial service is gradually being developed.

Financial data in millions of Swiss fr.:

	1951	1952	1953*
Revenue	1,812.0	2,010.6	1,818.2
Expenditure	1,889.2	2,274.9	1,913.4

\* Budget estimate.

The debt of the Confederation alone (excluding the railway debt) was 7,727,400,-000 fr. on Dec. 31, 1952.

Minerals include small amounts of iron ore, gold and coal. Nearly 25 per cent of the country is covered by forest.

**TOPOGRAPHY AND CLIMATE.** Most of Switzerland is an irregular, mountainous plateau bordered by the great bulk of the Alps on the south and by the Jura Mountains on the northwest. Its greatest length is 226 miles, greatest width, 137 miles. A fourth of its total area is covered by scenic mountains and glaciers. The highest peaks are Monte Rosa (15,217 ft.) and Matterhorn (14,780 ft.), both on the Italian border, and the Jungfrau (13,667 ft.), southeast of Interlaken. The sources of the Rhine, Rhône and Aar are in Switzerland. The country's largest lakes, Geneva, Constance (Boden See) and Maggiore, straddle the French, German-Austrian and Italian borders, respectively. Neuchâtel, 92 square miles, is the largest wholly Swiss lake.

The climate is temperate and varies greatly with altitude. The coldest month (January), for example, averages 31.8° at Basel, which is 909 feet in elevation, and 16.2° at Säntis, with altitude of 8,202 feet. July is the warmest month, with a mean of 66.4° in Basel and 41° at Säntis.

Continued on p. 715

## Syria (Republic)

Area: 73,587 square miles.

Population (est. 1952): 3,433,784 (Arab, Armenian, Kurdish, Turkish, French).

Density per square mile: 46.7.

President: Adib el Shishakly.

Principal cities (est. 1951): Aleppo (Alep), 371,897 (northern trading center); Damascus (Damas), 345,237 (capital); Homs, 121,044 (farming, silk); Hama, 87,884 (Bedouin trading center).

Monetary unit: Syrian pound (£S).

Languages: Arabic, Aramaic, French.

Religions: Moslem (Sunni), 69.8%; Moslem (Alawite), 11.0%; Greek Orthodox, 4.6%; Armenian Orthodox, 3.5%; Moslem (Druze), 3.1%; others (Syrian Orthodox and Catholic, Greek and Armenian Catholic, Israelite, etc.), 8.0%.

**HISTORY.** Ancient Syria was conquered by Egypt about 1500 B.C., and after that by Hebrews, Phoenicians, Assyrians, Chaldeans, Persians and Greeks. From 64 B.C. until the Arab conquest in A.D. 636, it was part of the Roman Empire except during brief periods. The Arabs made it a trade center for their whole empire, but it suffered severely from the Mongol invasion in 1260 and fell to the Ottoman Turks in 1516. Syria remained a Turkish province until World War I.

A secret Anglo-French pact of 1916 put Syria in the French zone of influence. The League of Nations gave France a mandate over Syria after World War I, but the French were forced to put down several nationalist uprisings. In 1930, France recognized Syria as an independent republic, but still subject to the mandate. After nationalist demonstrations in 1939, the French high commissioner suspended the Syrian constitution. In 1941 British and Free French forces invaded Syria to eliminate Vichy control. During the rest of World War II, Syria was an Allied base. Again in 1945, nationalist demonstrations broke into actual fighting, and British troops had to restore order. Syrian forces met a series of reverses while participating in the Arab invasion of Palestine in 1948. After Mar. 30, 1949, when the government was overthrown by Husni Zayim, there were several Army *coups d'état*. That of Nov. 29, 1951, was engineered by Col. Adib el Shishakly. Fawzi Selu became chief of state and prime minister on Dec. 3. Shishakly was unopposed in presidential elections held July 10, 1953.

**GOVERNMENT AND DEFENSE.** The 1953 constitution is based to some extent on that of the U. S., with three nominally coequal branches—executive, legislative and judicial. Executive power is vested in a popularly elected president, and legislative power in a unicameral parliament. Women have the right to vote.

The Syrian army is organized around a cadre of *troupes spéciales* transferred from French to Syrian jurisdiction in Aug., 1945.

**SOCIAL AND ECONOMIC CONDITIONS.** Primary education is compulsory. In 1951 Syria had 1,759 primary schools with an enrollment of 260,759, and 136 secondary schools with 28,595 pupils. There is a university at Damascus.

Agriculture and animal breeding are the main industries. Only half the land is arable, and only a third is actually cultivated. Most crops require irrigation. In 1951-52 Syria grew 1,341,000 metric tons of wheat and 467,000 tons of barley. Other leading crops include sorghum, olives, cotton, grapes, lentils and tobacco. Stock-raising is important among nomads and semi-nomads.

Exports in 1952 totaled £8319,573,000; imports were £8313,340,000. Chief exports were ginned cotton (33%), wheat (9%), barley (9%) and wool (4%). Principal customers were Britain (24%), Lebanon (22%) and France (15%); chief suppliers, the U. S. (15%), Britain (13%) and France (10%).

In 1950 Syria had 3,021 miles of highway and (1949) 539 miles of railway.

The budget for the fiscal period July 1, 1951-Dec. 31, 1952, estimated revenue at £8259,000,000 and expenditure at £8265,000,000. The public debt on Dec. 31, 1950, was £89,810,940.

**TOPOGRAPHY AND CLIMATE.** Coastal Syria is a narrow plain. Back of that is a range of coastal mountains, and still farther inland is a steppe area. In the east is the Syrian Desert, and in the southeast next to Jordan is the Jebel Druze Range. The climate is subtropical, with rainfall averaging 50 inches on the coastal range but diminishing to less than four inches in parts of the desert. Summer temperatures at Aleppo range from about 75° at night to 100° during the day; winter temperatures, from freezing to 50°.

the Asiatic continent in the 6th century A.D., and by the end of the 13th century ruled most of the western portion. During the next 400 years the Siamese fought sporadically with the Cambodians to the east and the Burmese to the west. The British obtained recognition of paramount interest in Siam in 1824, and in 1896 an Anglo-French accord guaranteed Siamese independence. In 1909 Siam renounced claims to suzerainty over four Malayan states in return for almost complete cessation of British interference in Siamese internal affairs. Siam declared war on the Central Powers in 1917.

A coup on June 24, 1932, changed the absolute monarchy into a representative government with universal suffrage. Thus shorn of much power, King Prajadhipok abdicated in March, 1935, in favor of his nephew, Prince Ananda Mahidol. After five hours of token resistance on Dec. 8, 1941, Siam yielded to Japanese occupation and became one of the springboards in World War II for the Japanese campaign against Malaya. After the fall of its pro-Japanese puppet government in July, 1944, Siam pursued a policy of passive resistance against the Japanese, and on Aug. 16, 1945, after the Japanese surrender, Siam repudiated the declarations of war it had made against Britain and the U. S. in 1942.

By a treaty signed with Britain and India Jan. 1, 1946, Siam renounced all wartime acquisitions of Malayan territory and agreed that no canal linking the Gulf of Siam with the Indian Ocean would be cut across Siamese territory without British concurrence. A Franco-Siamese agreement of Nov. 17, 1946, provided for the return to Indo-China of a border area ceded to Siam by Vichy France in 1941.

Luang Pibul Songgram, prime minister during the Japanese occupation, seized power in a bloodless coup on Nov. 9, 1947, and although his party was defeated in elections for the Constituent Assembly on Jan. 29, 1948, he retained power and was designated Prime Minister on Apr. 15, 1948. He remained in the post despite two coups d'état in 1951.

On May 11, 1949, the name Thailand, under which the country was known during World War II, was readopted in place of Siam.

King Rama IX, who was born Dec. 5, 1927, second son of Prince Mahidol of Songkhla, succeeded to the throne on June 9, 1946, when his brother, King Ananda Mahidol, died of a gunshot wound. He was married on April 28, 1950, to Princess Kitiyakara; their son, Vajiralongkorn, born July 28, 1952, is heir apparent.

**GOVERNMENT AND DEFENSE.** Thailand is a constitutional hereditary monarchy. Under the 1932 constitution, restored after

## Thailand (Siam) (Kingdom) (Muang Thai)

Area: 198,247 square miles.

Population (est. 1952): 19,192,000 (1937: Thai, 90%; Chinese, 3.4%; Indian and Malayan, 3.4%; others, 3.2%).

Density per square mile: 96.8.

Ruler: King Rama IX.

Prime Minister: Luang Pibul Songgram.

Principal cities (census 1947): Bangkok (Krung Thep), 827,290 (capital, chief port); Khonkaen, 590,664 (trading center); Chleng Mai, 534,623 (rice, teak); Chleng Ral, 476,118 (northern trading center).

Monetary unit: Baht.

Languages: Thai (Siamese), Chinese.

Religions (census 1947): Buddhist, 89%; Moslem, 4%; Christian and others, 7%.

\* Including about 2,500,000 of Chinese descent born in Siam.

**HISTORY.** The Siamese first began moving down into their present homeland from

the Dec. 1951 *coup d'état* to replace that of 1949, there is a unicameral Parliament, half nominated, half elected. The government is administered by the Prime Minister and his Cabinet, who are responsible to the Parliament.

The 1937 defense act made military service compulsory for a period of two years between the ages of 18 and 30. The army had about 30,000 men in 1951. There was also a militarized police force of about 40,000 men and a fair-sized air force. The navy had 3 coast-defense ships, 4 submarines, 4 frigates and escort vessels and other smaller craft. An infantry battalion, 2 naval vessels and several planes were sent to Korea.

**SOCIAL AND ECONOMIC CONDITIONS.** Buddhist monasteries throughout Thailand control most of the elementary education in rural districts. In 1951 there were 364 government schools, with 81,340 pupils, 18,581 local public and municipal schools, with 2,660,492 pupils, and 1,297 private schools, with 267,442 pupils. The 5 institutions of higher learning had 10,557 students.

Almost 90 per cent of the population work at agriculture. Rice (1952: 7,000,000 metric tons) is the principal crop, the staple food and the leading export. It is the basis of Thailand's whole economy and the key to its prosperity. Next most important is rubber (exports 1952: 98,985 metric tons). Other products include coconuts, corn, tobacco, cotton, sesame, sugar cane and soybeans. Livestock, poor in quality and quantity, is used mainly for hauling. Manufacturing is of little importance, except for native handicraft and food processing. Domestic business is largely controlled by Chinese.

Recent trade statistics are as follows (in millions of baht):

	1949	1950	1951	1952
Exports	2,777	3,576	4,473	3,747
Imports	2,280	2,881	3,714	5,678

Chief exports in 1950 were rice (49%), rubber (20%), tin (8%) and teak (4%). Leading customers in 1949 were Singapore (19%), the U. S. (15%) and India (13%); chief suppliers, Hong Kong (17%), the U. S. (16%) and Singapore (13%).

There are good water routes which handle about 80 per cent of all internal traffic. Bangkok, the chief port, 25 miles up the Chaupaya River from the Gulf of Siam, handles about 80 per cent of the foreign trade. Railways under government ownership total 2,032 miles, and in 1950 there were about 3,600 miles of highway. With a number of international airlines using its facilities, Bangkok is rapidly becoming the hub of commercial aviation in south-east Asia.

The 1952 budget, as supplemented, estimated revenue at 3,055,000,000 baht and expenditure at 4,636,912,000 baht. The public debt on Feb. 28, 1953, included internal loans of 426,222,000 baht, floating debt of 1,641,328,000 baht, an external loan of £1,318,000, U. S. dollar credits of \$3,413,000 and International Bank loans of \$14,218,000.

There are small deposits of many important minerals, and some precious stones. Only tin, gold, tungsten and salt are in commercial production. Tin output in 1940 was 20,841 tons (10% of the world total), but production was only 9,473 long tons (tin-in-concentrates) in 1952.

Almost 70 per cent of Thailand's total land area is forested. Teak, the main forest product, covers over one-third of this area, chiefly in the northern hill country. Production in 1948 was about 65,000 tons. Other forest products are thingan wood, ironwood, ebony, rattan and sticklac.

Fisheries, both ocean and river, ordinarily rank second to agriculture in product value. The average catch of 40,000 tons includes mainly mackerel, as well as anchovies, mollusks and shellfish.

**TOPOGRAPHY AND CLIMATE.** Thailand, about three-fourths the size of Texas, supports most of its population in the central alluvial plain which is drained by the Chaupaya River and tributaries. The climate is monsoonal, but the full force of the monsoons is broken by the western frontier hills. Rainfall decreases from south to north. Humidity is always high, but temperatures fall as low as 40° in the November-February cool season. Inland temperatures often rise to 100° during the hot season.

## Trieste

(Free Territory under U. N. protection)

Area: 293 square miles.

Population (est. 1951): 378,000 (Italian, 85%; Slovene and Croat, 10%; others, 5%).

Density per square mile: 1,290.1.

Principal city (census 1951): Trieste, 271,542.

Monetary unit: Lira, Yugoslav dinar.

Religion: Predominantly Roman Catholic.

Languages: Italian and Slovene (official), Croat.

Focal point of Big Power dispute during the 1946 treaty negotiations, the tiny Free Territory of Trieste on the northeastern Adriatic took existence on Sept. 15, 1947. Soviet Russia had backed Yugoslav claims for the whole Istrian peninsula, including the port of Trieste, an ideal sea outlet for

Soviet-dominated Danubia. The U. S. and Britain opposed these claims. A French compromise was adopted which gave Yugoslavia the predominantly Italian cities of western Istria, including the Pola naval base; from the other predominantly Italian parts, consisting of the city and surrounding territory of Trieste, the Free Territory was formed under U. N. protection.

The territory formed part of Austria (Trieste from 1382) before World War I, and Trieste became the strategic port of central Europe and outlet for the trade of the Danube basin. By the treaty of Rapallo (Nov. 12, 1920) between Italy and Yugoslavia, the territory along with all of Istria went to Italy as part of "Italia irredenta." After the German collapse early in May, 1945, Tito's Yugoslav forces occupied the territory, determined to unite it with Yugoslavia. By an agreement of June 9, 1945, most of the area (197 sq. mi.) was put under temporary Yugoslav administration, but a smaller part (98 sq. mi.), including Trieste, was placed under Allied control.

The governor of the Free Territory, who cannot be an Italian or Yugoslav national, is appointed by the United Nations Security Council for a term of five years, after consultation with the Italian and Yugoslav governments. Legislative authority is vested in a popularly elected unicameral Assembly. The Council has not yet reached agreement on the choice of a governor; hence the territory is still administered by Anglo-U. S. and Yugoslav forces within the two zones defined by the peace treaty. The Yugoslav zone has virtually been incorporated into Yugoslavia.

On March 20, 1948, the U. S., Great Britain and France jointly proposed the return of Trieste to Italy. Yugoslavia countered with an offer to yield Trieste if Italy in turn would give up the city of Gorizia, but the Italian government refused.

## Turkey (Republic)

### (Türkiye Cümhuriyeti)

Area: 296,185 square miles.

Population (est. 1952): 21,983,000 (Turkish, 94%; Greek, 2.2%; Bulgarian, 1.4%; Yugoslavian, .9%; others, 1.5%).\*

Density per square mile: 74.2.

President: Celâl Bayar.

Premier: Adnan Menderes.

Principal cities (census 1950): Istanbul (formerly Constantinople), 1,018,468 (chief port, commercial center); Izmir (Smyrna), 362,340 (seaport); Ankara (Angora), 286,781 (capital); Adana, 117,799 (agricultural center); Bursa, 100,007 (silk, carpets); Eskisehir, 88,459 (trading center).

Monetary unit: Turkish pound (₺).

Languages: Turkish, Greek, Bulgarian.

Religions: Mohammedan, 98.6%; others, 1.4%.

\* 1935, by place of birth.

**HISTORY.** Successor to the once great Ottoman Empire, Turkey is a nation of striking contrasts ranging from the multi-racial metropolis of Istanbul to the dreary ranges of Anatolia. It has made marked advances toward modernization and Westernization under the original impetus of the national hero, the late Kemal Atatürk.

The Ottoman Turks first appeared in the early 13th century A.D. Under the leadership of their aggressive sultans, they gradually spread their hegemony over most of the Near East and the Balkans, capturing Constantinople in 1453 and storming the gates of Vienna in the 17th century. At the height of its power, the Empire stretched from the Persian Gulf to the frontiers of Poland and from the shores of the Caspian Sea to Oran in Algeria.

The defeat of the Turkish navy at Lepanto in 1571 by the Holy League and of Turkish forces besieging Vienna in 1683 portended the decline of Ottoman power, reducing Turkey to the status of a pawn in Europe's political maneuvers. Russia moved into the Balkans in the 18th century and made herself official protector of the Balkan Christians. Fear of a Russian drive on Constantinople prompted England and France to declare war on Russia, and the Crimean War (1853-56) followed. As a result of the Russo-Turkish war (1877-78), Bulgaria became practically independent, and Rumania and Serbia threw off their nominal allegiance to the sultan. Further defeats were suffered by Turkey in a war with Italy (1911-12) and in the Balkan Wars (1912-13). Meanwhile, a revolt led by the Young Turks, an organization of youthful liberals, had forced the abdication of Sultan Abdul-Hamid in 1909 and established a constitutional regime.

On Aug. 2, 1914, at the outbreak of World War I, a secret alliance was signed between Germany and Turkey, whose army was advised by a German military mission, and in September the Allies declared war on Turkey. Turkish forces successfully defended the strategic Dardanelles, but British forces seized Palestine, Mesopotamia and Syria; and the Hejaz revolted. By 1918 Allied forces held the territory along the Dardanelles and the Bosphorus, and later Greek forces occupied Smyrna and vicinity.

In 1919 the new Nationalist party, headed by Mustafa Kemal, was organized to resist the Allied occupation, and in 1920 a National Assembly elected Mustafa Kemal president of both the assembly and the government. Under his leadership, the Nationalist government was recognized by foreign powers, the Greeks were driven out of Smyrna, and other Allied forces were withdrawn. The present Turkish boundaries (with the exception of Alexandretta, ceded to Turkey by France in 1939) were fixed by the Treaty of Lausanne (1923)

and later negotiations. The caliphate and sultanate were separated and the sultanate abolished on Oct. 1, 1922. On Oct. 29, 1923, Turkey formally became a republic with Mustafa Kemal, who took the name of Kemal Atatürk, as its first president. He carried out an extensive program of reform, modernization and industrialization.

The Montreux Convention (1936) abrogated a number of provisions of the Treaty of Lausanne relating to the Straits and authorized Turkey to fortify the former demilitarized zone. Turkey was given sole responsibility for the defense of the area. On Aug. 7, 1946, Soviet Russia proposed in a note to Turkey that defense of the Straits be made a joint Turkish-Soviet responsibility under a revision of the Montreux Convention, but the proposal was opposed by both Britain and the U. S., as well as by Turkey.

General Ismet İnönü was elected to succeed Kemal Atatürk on the latter's death in 1938 and was re-elected in 1939, 1943 and 1946, but was defeated in 1950 and succeeded by Celâl Bayar. On Oct. 19, 1939, a mutual assistance pact was concluded with Britain and France. Turkey followed a neutral course during most of World War II, but on Aug. 2, 1944, she broke off relations with Germany, and on Jan. 3, 1945, with Japan. On Feb. 23, 1945, she declared war on Germany and Japan, but took no active part in the conflict. After the abrogation of the Soviet-Turkish non-aggression pact in March, 1945, Turkey was subjected to Soviet pressure for a share in the control of the Dardanelles. To assist Turkey in effecting modernization necessary for the preservation of its national integrity, the U. S. in 1947 agreed to advance \$100,000,000, all of which was to be used for the armed forces or to a lesser extent for economic projects directly related to Turkish defense. Turkey has also received aid under the European Recovery Program. It became a full member of the North Atlantic Treaty organization in 1952.

**GOVERNMENT.** The constitution, as amended in 1937, defines the Turkish state as "republican, nationalist, populist, étatist, secular, and revolutionary." The president is chosen from the deputies of the National Assembly; his term of office is identical with the life of each Assembly. The 487 members of the Assembly are elected by universal suffrage for a term of four years. According to the constitution, the Assembly exercises the executive power through the president and Council of Ministers (cabinet) appointed by him. It may at any time control the actions of the government and at any time dismiss it.

The Republican People's party, which had been in power since 1923, was overwhelmingly defeated in the free elections held May 14, 1950, by the Democratic party. The

latter won 408 seats in the assembly, People's party 69, National party 1, independents 9. Centralization is the basis of the governmental system. The pre-republic judicial system, based on Sunni Moslem law, was replaced in 1926 by a new system based on the Swiss civil code.

**DEFENSE.** Military service is compulsory from 20 to 45; the initial training period is three years. The strength of the army, mobilized since 1939, is about 375,000. Large purchases of modern matériel were made during World War II, and additional armaments were received from the U. S. after the war. The air force, under the direct control of the Turkish General Staff, had a strength of about 1,000 planes in 1950. The navy has 1 battle cruiser, 10 fleet destroyers and 11 submarines, in addition to smaller craft, including a number of former U. S. and British minesweepers. A regimental combat team of 5,000 men was dispatched to Korea in 1950.

**EDUCATION.** Elementary education is nominally obligatory from 7 to 16. In 1950-51 there were 17,318 primary schools with 1,675,415 pupils and 442 secondary schools with an enrollment of 78,449. There were 23 institutions of higher learning with 27,585 students in 1949-50. The Latin alphabet replaced the Arabic script in 1928.

**AGRICULTURE AND INDUSTRY.** Agriculture is the principal economic activity, engaging about 65 per cent of the population. Only about 20 per cent of the land is under cultivation, but the government has made great efforts to modernize and improve farming. The most important cash crop is tobacco (1951: 82,000 metric tons) with the best quality coming from the Pontic coast near Samsun and also from Bafra, Sinop and Trebizond. Cotton (1952: 170,000 metric tons, ginned) is grown in the south of Asia Minor while figs come exclusively from the Smyrna region. Principal grain crops, with 1952 production in metric tons, are wheat, 6,500,000; barley, 3,000,000; oats, 310,000; and corn, 738,000. Turkey is a leading exporter of olive oil; the Brusa region and the Ionian coast are the principal areas of cultivation. Opium poppies are grown in the Smyrna, Malatia and Tokat regions.

Turkey is rich in livestock. The most important animal is the goat, of which there were 17,323,000 in 1949, including the valuable Angora which thrives on the uplands of the plateau. There were also 11,268,000 cattle and buffalo, 1,173,000 horses and 25,200,000 sheep in 1951. Wool production in 1952 was 30,000 metric tons, clean basis.

The 1950 census showed 98,828 industrial establishments, of which 2,202 were classified as large, with a total work force of 353,994. Production was valued at £22,-318,600,000. Staple industries have been

established in iron, steel, textiles, paper, glass, sugar and cement. A large proportion of the factories are government-operated. Istanbul is the major industrial area.

**TRADE.** Turkey's foreign trade was as follows, in millions of Turkish pounds:

	1950	1951	1952
Exports	738	879	1,016
Imports	877*	1,126*	1,557*

\* Includes military equipment imported under U. S. military assistance program.

Principal customers in 1952 were western Germany (24%), the U. S. (16%), France (14%) and Britain and Italy (each 7%). Leading suppliers were western Germany (25%), Britain (18%), the U. S. (8%) and Italy (7%). Chief exports were raw cotton (19%), tobacco (17%), fruits, largely sultanas (16%) and wheat (16%); leading imports, machinery, iron, steel, fuel and oil.

**COMMUNICATIONS AND FINANCE.** In June 1952, Turkey had a merchant fleet of 243 vessels (100 tons and over) aggregating 443,663 gross tons. The length of railways (1949) was 4,882 miles, all state-owned. Highway mileage was 13,530.

Recent public finance data are as follows, in millions of Turkish pounds:

	1950-51	1951-52*	1952-53†
Revenue	1,312	1,353	1,551
Expenditure	1,468	1,543	1,750

\* Provisional. † Budget estimate.

The public debt, consolidated and floating on Dec. 31, 1952, was £T2,895,561,000.

**MINERALS AND FORESTS.** Turkey's rich mineral resources are still comparatively unexploited. Deposits of copper in the large field at Arghana, near the Iraq-Syrian frontier, have been estimated at 1,600,000 tons (1952 output: 21,100 metric tons). Turkey is also relatively rich in coal, with large deposits in the Ereğli region on the Pontic coast some 150 miles from Istanbul (1952 output: 4,850,000 tons). A virtual world monopoly is enjoyed in meerschaum, found in the Eskisehir district. Other important minerals include chrome, manganese ore, iron ore, emery and antimony.

Nearly nine per cent of the total area of Turkey in Asia is forest land, covering 25,419 square miles. A large proportion of Eastern Thrace is also under forest, covering 1,648 square miles.

**TOPOGRAPHY AND CLIMATE.** Turkey is divided into two natural areas by the historic waterway formed by the Dardanelles, the Sea of Marmara and the Bosphorus. Turkey in Europe comprises an area about equal to the state of Massachusetts. It is hilly country drained by the Maritsa River and its tributaries. Almost all the population is concentrated in and near the two important towns, Istanbul (Constantinople) and Edirne (Adrianople). Turkey in

Asia, or Anatolia, about the size of Texas, is roughly a rectangle in shape with its short sides on the east and west. Its center is a treeless plateau rimmed by mountains. Along the seacoast the elevation drops steeply to a wooded plain 75 mi. wide. On land frontiers, the belt of forest clothes the foothills of the Taurus Mountains and the Armenian highlands.

Turkey has a great variety of climate. Along the coast from Antioch to the Dardanelles the climate is Mediterranean, with rainy winters and dry summers. Thence to the Bosphorus it is transitional to the type of climate with heavy year-round rainfall. Semitropical fruits and tea may be grown in the region beyond Trebizond on the Black Sea. The western plateau has a harsh steppe climate, with cold winters, hot summers and scanty rainfall, while the eastern plateau exhibits a transition from steppe to alpine climate. Istanbul has a mean annual temperature of 57° (maximum 99°, minimum 17°) and average yearly rainfall of 28.3 inches. Rain falls approximately one day out of three.

## Union of Soviet Socialist Republics

Area (est.): 8,473,444 square miles\* (8,173,666 in 1938).

Population (est. 1952): 207,000,000\* (170,467,186 by 1939 census) (Great Russian, 58.4%; Ukrainian, 16.6%; Byelorussian, 3.1%; Uzbek, 2.9%; Tartars, 2.5%; Kazakhs, 1.8%; Armenian, Azerbaijani, Georgian, each 1.3%; more than 100 others, 10.8%).

Religions: Russian Orthodox (predominant), Mohammedan, Roman Catholic, Jewish, Lutheran.

\* Including acquisitions since 1939.

**HISTORY.** The history of Russia begins with the perhaps legendary figure of the Viking Rurik, who according to tradition came to Russia in A.D. 862 and founded the first Russian dynasty in Novgorod. The various tribes were united by the spread of Christianity in the 10th and 11th centuries; Vladimir "the Saint" was converted in 988. During the 15th century the grand dukes of Kiev held such centralizing power

as existed. In 1240 Kiev was destroyed by the Mongols, and the Russian territory was split into numerous smaller dukedoms, out of which three large centers emerged—Galicia, Moscow and Novgorod. The early dukes of Moscow extended their dominions through their office of tribute collector for the Mongols.

In the late 15th century, Ivan III, the reigning duke, acquired the rival kingdoms of Novgorod and Tver and threw off the Mongol yoke. Ivan IV, the Terrible (1533–84), first Muscovite duke to assume the title of tsar, is considered to have founded the Russian State. He crushed the power of rival princes and boyars (great land-owners), but Russia remained largely medieval until the reign of Peter the Great (1682–1725), grandson of the first Romanov tsar, Michael (1613–45). Peter effected extensive reforms aimed at Westernization, and through his defeat of Charles XII of Sweden at the Battle of Poltava (1709), he extended Russia's boundaries to the west. Catherine the Great (1762–96) continued Peter's Westernization program and also expanded Russian territory, acquiring the Crimea and part of Poland. During the reign of Alexander I (1801–25), Napoleon's attempt to subdue Russia was defeated (1812–13), and new territory was gained, including Finland (1809) and Bessarabia (1812). Alexander was the originator of the Holy Alliance which crushed for a time Europe's rising liberal movement. Between the Napoleonic Wars and World War I, a few reforms were introduced, but the autocratic power of the tsars remained unchanged.

During the reign of Alexander II (1855–81), Russia's borders were pushed to the Pacific and into central Asia. Serfdom was abolished in 1861, but heavy restrictions were imposed on the emancipated class. Revolutionary strikes following Russia's defeat in the war with Japan forced Nicholas II (1894–1917) to grant a representative national body (Duma), elected by narrowly limited suffrage. It met for the first time in 1906. Nicholas continued in his reactionary course, however, and the overwhelmingly liberal Duma had little or no influence in the government.

World War I demonstrated the corruptness and inefficiency of the tsarist regime, although the call of patriotism held the poorly equipped army together for a time. Disorders broke out in Petrograd (now Leningrad) in March, 1917, and, following the winning over of the Petrograd garrison, the revolution was in full swing. Nicholas was forced to abdicate under pressure from the Duma and was later killed by the revolutionists. A provisional government was formed, composed of both conservative and radical elements. This government, under the successive premier-

ships of Prince Lvov and Alexander Kerensky, a Menshevik or moderate socialist, soon lost ground to the radical or Bolshevik wing of the Socialist Democratic Labor Party. Finally, on Nov. 7, 1917, came the Second Revolution, engineered by Nikolai Lenin and Leon Trotsky and their small but well-disciplined Bolshevik following in the Petrograd Soviet. The government was turned over the next day to the Congress of Soviets (councils of soldiers, peasants and workers), which vested the government in a Council of People's Commissars with Lenin as premier and Trotsky as foreign minister. The humiliating Treaty of Brest-Litovsk (March 3, 1918) concluded the war with Germany, but civil war and intervention by foreign powers prevented the new Communist government from gaining control of all Russia until 1920. A brief war with Poland in 1920 resulted in Russian defeat and withdrawal.

On July 6, 1923, the vast territory under Soviet rule—previously an inchoate mass whose constituent parts were changing constantly—became the Union of Soviet Socialist Republics, formed by the union of the Russian S.F.S.R. and the Ukrainian, Byelorussian and Transcaucasian S.S.R.'s.

The sudden death of Lenin (Jan. 21, 1924) precipitated an intraparty struggle between the group led by Joseph Stalin, general secretary of the party, and the opposition, led by Trotsky, which favored not only swifter socialization at home but fomentation of revolution abroad. In 1927, Trotsky and other opposition leaders were expelled from the party and exiled. The first Five-Year Plan (1928–32) called for gradual, progressive increase in industrial and agricultural production. Its collectivization program was opposed by the Kulaks, or wealthier peasants, who were vigorously suppressed. Purges carried out in 1936–38 removed many prominent leaders of the Revolution and top army officers.

Soviet foreign policy—first featured by friendship with Germany and antagonism toward England and France and then, after Hitler's rise to power in 1933, by participation in the League of Nations and an anti-Fascist program—took another abrupt turn on Aug. 24, 1939, with the signing of a Soviet-German nonaggression pact. Territory seized from Poland (Sept., 1939) became part of the Ukrainian and Byelorussian S.S.R.'s; that secured from Finland at the conclusion of the Finnish war of 1939–40, part of the Karelian S.S.R. set up March 31, 1940; that secured from Rumania (Bessarabia and northern Bukovina), part of the Moldavian S.S.R. set up Aug. 2, 1940; and finally the formerly independent states of Estonia, Latvia and Lithuania, occupied in June, 1940, were absorbed into the U.S.S.R. as the 14th, 15th and 16th Soviet Republics. The latter annexations have not been recognized by

the United States, Britain, or the majority of other nations.

Immediately following the German attack (June 22, 1941), all necessary powers for the defense of the state were vested in the State Defense Council headed by Stalin, who had taken over the post of premier on May 6. The Germans quickly seized approximately 500,000 square miles of Soviet territory, but Soviet forces resisted stubbornly, aided by increasing amounts of matériel from the U. S. and Britain. The great Soviet counteroffensive in the Stalingrad area (Nov., 1942-Feb., 1943) marked the turning point. Soviet troops gradually pushed the Nazis back and unleashed their final great offensive on Jan. 12, 1945. The nonaggression pact with Japan (1941) was denounced in April, 1945, and, following the declaration of war on Japan (Aug. 8, 1945), Soviet Far Eastern forces quickly occupied Manchuria, Karafuto and the Kuriles.

After the war, with its eastern European satellites drawn together into a solid bloc in opposition to the western democracies, the Soviet Union launched a full-scale political offensive against the non-Communist world, particularly the United States and Great Britain.

Efforts to discredit Anglo-U. S. influence were initially a failure. The western powers countered the Soviet blockade of Berlin with a highly effective "air-lift," completed the unification of western Germany and went on to unite all of western Europe (except Spain) into a solid wall of opposition to Communist aggression through the vehicle of the North Atlantic Pact. Nevertheless, there has been no indication of a change in Soviet plans or aims, and the Korean war was interpreted by many people as the start of widespread Communist military aggression to supplement the political "cold war." Evidence of an atomic explosion in the Soviet Union in the summer of 1949 was reported by President Truman on Sept. 23, 1949.

Stalin died on Mar. 6, 1953. The next day Georgi M. Malenkov succeeded him as premier. Malenkov's chief rivals for power—L. P. Beria, V. M. Molotov, N. A. Bulganin and L. M. Kaganovich—were named first deputy premiers. The first evidence of the expected intraparty struggle for power was revealed by the announcement on July 10, 1953, of the purging of Beria.

**GOVERNMENT.** Under the constitution of 1936, the Soviet Union is "a Socialist State of Workers and Peasants" whose highest organ is the Supreme Council of the Union, which exercises legislative authority. It consists of two co-equal Houses—the Council of Nationalities, in which each constituent republic has 25 representatives, each autonomous republic 11, each

autonomous oblast five, and each national okrug one (total 638); and the Council of the Union, elected on a nationwide basis with one representative for each 300,000 of population (total membership 678). All representatives are elected for four-year terms; the last election was held on Mar. 12, 1950. Elections amount to a blanket endorsement (or rejection) of a single list of candidates already nominated by the Communist Party, youth organizations, collective farms and trade unions. The only election in the Western sense of the word takes place in the selection of the nominees by these groups. All citizens over the age of 18 are enfranchised.

The Presidium of the Supreme Council acts as a directive body between the sessions of the Supreme Council. It has a chairman (sometimes referred to as the Soviet president), 16 vice chairmen (one for each constituent republic), a secretary and 24 members, all elected by the Supreme Council.

The highest executive and administrative power is exercised by the Council of Ministers (formerly People's Commissars) appointed by the Supreme Council and headed by a chairman (premier) and 14 vice chairmen. It issues decrees and executive orders on the basis of laws in operation and supervises their execution. The administrative machinery is necessarily vast and complicated, since it is responsible not only for the ordinary administrative functions of government, but also for the operation of state-owned enterprises.

The 16 constituent republics of the Union are as follows: the Russian Soviet Federated Socialist Republic (capital: Moscow) covering about 80 per cent of the total area; the Ukrainian S.S.R. (Kiev); Byelorussian S.S.R. (Minsk); Armenian S.S.R. (Yerivan); Azerbaijan S.S.R. (Baku); Georgian S.S.R. (Tiflis); Turkmen S.S.R. (Ashkhabad); Uzbek S.S.R. (Tashkent); Tadzhik S.S.R. (Stalinabad); Kazakh S.S.R. (Alma Ata); Kirghiz S.S.R. (Frunze); Karelo-Finnish S.S.R. (Petrozavodsk); Moldavian S.S.R. (Kishinev); Lithuanian S.S.R. (Vilnius); Estonian S.S.R. (Tallinn) and Latvian S.S.R. (Riga).

Postwar territorial acquisitions include the Carpatho-Ukraine (12,617 sq. mi.) obtained from Czechoslovakia June 29, 1945, incorporated into the Ukrainian S.S.R. as Zakarpatskaya Oblast; the Republic of Tannu Tuva in central Asia (64,000 sq. mi.) incorporated early in 1945 into the R.S.F.S.R. as the Tuvinian Autonomous Oblast; Karafuto or southern Sakhalin (13,935 sq. mi.) and the Kurile Islands (3,944 sq. mi.), occupied by Soviet troops in Aug., 1945, and incorporated into the Khabarovsk Krai of the R.S.F.S.R.; the northern part of eastern Prussia (about 7,000 sq. mi.), placed under *de facto* So-

viet administration at the Potsdam Conference and incorporated into R.S.F.S.R. as Kalliningrad (formerly Königsberg) Okrug; the Petsamo district of Finland, obtained *de jure* under the 1947 treaty and incorporated into the Murmansk Oblast of the R.S.F.S.R.; and Poland east of the Curzon Line (69,860 sq. mi.), under terms of the Soviet-Polish treaty of Aug. 16, 1945, incorporated into the Ukrainian and Byelorussian S.S.R.'s.

**COMMUNIST PARTY.** The only political party permitted to exist in the Soviet Union is the All-Union Communist Party, which claimed 6,882,145 members in Oct. 1952. Its organization parallels the entire governmental and economic structure of the country and guides all important action through instructions from the central organs to Party members who occupy most of the important political and economic positions. Its highest organ is the All-Union Party Congress, which meets irregularly. The Congress elects a Central Committee (125 members, 110 alternates), which in turn elects (1) an executive body (presidium) with 10 members, (2) a secretariat headed by a general secretary (N. S. Khrushchev) and (3) a Committee of Party Control.

Full members of the presidium of the Central Committee in July 1953 were G. M. Malenkov, V. M. Molotov, K. E. Voroshilov, N. S. Khrushchev, N. A. Bulganin, L. M. Kaganovich, A. I. Mikoyan, M. A. Saburov, M. G. Perukhin, (one vacancy); alternates, N. M. Shvernik, P. K. Ponomarenko, L. G. Melnikov, M. D. Bagirov.

In Sept., 1947, the Cominform (Communist Information Bureau), a Soviet-dominated organization composed of representatives from nine national Communist parties, was created to replace the Comintern (dissolved in 1943) as an instrument in the promotion of world-wide communism.

**DEFENSE.** The land, air and sea forces are under control of the Defense Ministry. Military service is compulsory; the initial training period varies from 2 to 5 years. The armed forces, which were estimated to have reached a peak of more than 15,000,000 in 1945, numbered approximately 4,500,000 in 1952. The strength of the army, including MVD and MGN troops (secret police organizations with paramilitary formations), was about 3,300,000, organized in more than 200 line divisions, not all of which were at full strength (10,000), with supporting troops. The air force had about 600,000 men and 20,000 planes; the navy, about 600,000 men. More than 500,000 troops were stationed outside Soviet borders, including 30 divisions in eastern Germany. At least 700,000 men were estimated to be located in Siberia and the Soviet Far East.

Information about the Red fleet is as vague as that about the army and air force. In 1953, it was believed to have a tonnage of about 600,000, including 3 battleships, 14 cruisers, 3 coast defense ships, 85 destroyers, 64 escort vessels, 370 submarines, and large flotillas of coastal and river craft, patrol vessels, minesweepers and other small ancillary craft. An extensive naval-construction program was part of the fourth Five-Year Plan.

In 1949 the Soviet Union received 45 vessels from the Italian fleet, including a battleship and a cruiser. At the same time it returned to Britain and the U. S. ships borrowed in 1944, including the battleship H.M.S. *Royal Sovereign* and the cruiser U.S.S. *Milwaukee*.

On its face, about 21 per cent of the 1953 budget was allotted for military expenditures, but expenses linked to the armed forces in other parts of the budget greatly increased this percentage.

**EDUCATION.** The school system throughout the country is based upon uniform text books and the same syllabus, although a number of hours are allowed for native language, literature and history in the non-Russian schools. All schools are state controlled, and compulsory education begins at the age of seven. Coeducation is being abolished and separate schools established for boys and girls. The boys' curriculum stresses military training; the girls', housework. Enrollment in primary and secondary schools in 1951 was 37,000,000. Under the Defense Ministry are the newly established Suvorov military schools for the training of future officers. In 1951, 880 colleges and institutions of higher learning had 1,250,000 students. Literacy was estimated at over 90% in 1950.

**AGRICULTURE.** Formerly an agricultural country, the Soviet Union has grown since about 1920 into an industrial-agricultural power, with agriculture making great advances at the same time. The total area under cultivation was 259,500,000 acres in 1913, 291,600,000 acres in 1929, and 388,000,000 acres in 1941.

#### PRODUCTION OF GRAIN CROPS

(in millions of bushels)

Grain	1935-39 average	1949	1950

#### ANIMAL INDUSTRY (millions of head)

Animal	1933	1947	1951
Horses	16.6	11.9	14.5
Cattle	38.4	52.0	58.8
Sheep and goats	50.2	84.7	107.5
Pigs	12.1	13.4	26.7

The Union's diverse climate permits the growing of the most varied crops, ranging from the temperate to the subtropical. Under the fourth Five-Year Plan, grain production increased to 124,700,000 metric tons in 1950 (a 5% increase over the pre-war average), sugar beets to 24,300,000 (14% increase), and raw cotton to 3,750,000 (60% increase). Further increases were projected under the fifth Five-Year Plan (1951-55), details of which were revealed in Aug. 1952.

**INDUSTRY.** Almost all industry in the Soviet Union is carried on by organizations owned or controlled by the state. About 80 per cent of the total state industries is controlled by 291 large trusts. The industrialization of the country has been a major objective of its leaders. Completion of the first two Five-Year Plans (1928-32, 1933-37) and of most of the third (1937-42) saw a great increase in the volume and versatility of Soviet industry.

The large-scale evacuation of plants to the East and the construction of new plants there during World War II, coupled with the eastward orientation of industry prior to the war, has shifted the balance to newly developed regions in Central Asia and Siberia from the Moscow-Leningrad area and the Ukraine. The new regions are now the center of Soviet industrial power, accounting for almost all magnesium and aluminum production, and more than 60 per cent of the pig iron and steel production. The production of consumers' goods continues to be subordinate to the production of heavy capital equipment.

Large increases in production were reported under the fourth Five-Year Plan, which ended in 1950. Pig-iron production in 1952 was about 25,000,000 metric tons; steel production, about 35,000,000 tons.

The fifth Five-Year Plan projected substantial increases by 1955 over 1950 levels, including pig iron 76%, steel 62%, rolled metal 64%, metallurgical equipment 85%, synthetic rubber 82%, tractors 19%, cotton textiles 61% and woolen textiles 54%. In order to achieve the further development of industrial production, state capital investment in industry was to be doubled as compared with 1946-50.

It was officially reported at the end of 1952 that goals for that year under the plan had been exceeded.

**FOREIGN TRADE.** Soviet foreign trade is a state monopoly, and foreign goods are purchased in accordance with an over-all plan conducted under the supervision of the Foreign Trade Ministry. Connected with the Ministry are a number of export-import and transport combines.

The U.S.S.R. share in world exports (1938) was 1.1%; imports, 1.2%. No later official statistics are available, although it

was estimated that in 1950 those shares were 1.9% and 1.8%, respectively. Exports in 1938 were grain, 21.9%; lumber and timber, 16.8%; furs, 9.9%; petroleum and products, 7.9%; and cotton goods and threads, 4.5%. Imports included machines and industrial equipment, 26.8%; iron and steel, 10.3%; wool, 5.3%; electrical machines and parts, 4.2%; and live animals, 3.7%. From June 22, 1941, until 1945, large supplies were received from Britain and Canada, and from Oct. 1, 1941, until after V-J Day, a total of \$11,141,470,000 in lend-lease assistance came from the U. S. **COMMUNICATIONS.** According to *Lloyd's Register* of shipping, the merchant marine on June 30, 1952, had 1,019 ships (over 100 tons) aggregating 2,260,537 tons. Merchant ship construction was subordinate to naval construction under the fifth Five-Year Plan. The principal ports include Leningrad on the Gulf of Finland, Murmansk and Archangel on the Arctic Ocean and White Sea, respectively; Vladivostok on the Sea of Japan; and the Black Sea ports of Odessa, Sevastopol, Novorossiisk and Batumi. River and canal transport is extremely important. In 1950 there were about 75,000 miles of navigable rivers and canals.

Railway mileage was estimated in 1950 at 70,000, of which about a third was double-tracked. Freight traffic reached 569,117,490 tons and 1,777,800,000 passengers were carried in 1938. Highway mileage (1945) totaled 849,520, but only 7,146 mi. (less than in Vermont) were reported as all-weather roads in 1949. The fifth Five-Year Plan called for a 150% increase in the mileage of new railway lines and a 60% increase in doubletracking. New construction in Siberia and reconstruction in the Baltic republics was to be emphasized.

Air traffic is assuming great importance, especially in the central Asiatic portion of the U.S.S.R. Prior to World War II, the network of air routes covered 69,845 miles; in 1950 the estimated length was 109,000 miles, over which some 2,000,000 passengers were carried (300,000 in 1938). Moscow is connected with the capitals of all the Union republics by daily air service, and there are regular services to the Far East and Europe. No foreign air routes have been allowed to enter the U.S.S.R.

**FINANCE.** Recent financial data are as follows, in billions of roubles:

	1951	1952	1953*
Revenue	468.0	497.7	543.3
Expenditure	441.3	460.2	530.5

\* Budget estimate.

The budget includes charges for the financing of industry, transportation, agriculture and commerce—items which ordinarily are handled through private channels in other countries.

**MINERALS.** The U.S.S.R. is probably the richest country in the world in mineral resources, containing deposits of almost every known mineral. It ranks among the top producing nations in coal, chromite, iron ore, petroleum, gold, copper, manganese and other products. The richest mineral region is that of the Ural Mountains, which lacks only good coking coal. Total coal production in 1952 was estimated at 300,000,000 metric tons; iron ore (1950), perhaps 40,000,000 tons. Other production estimates included aluminum (1951) 200,000 metric tons; copper (1952) 325,000 short tons; lead (1952) 170,000 short tons; platinum (1948) 125,000 oz.; tin (1949) 9,000 metric tons; zinc (1952) 205,000 short tons; gold (1951) 9,500,000 oz. Petroleum production was estimated at 343,000,000 barrels in the year 1952, including eastern Poland and Sakhalin. Uranium deposits are believed to exist in the U.S.S.R.

**FORESTS.** With a forested area of about 2,500,000,000 acres, the U.S.S.R. possesses a large proportion of the world's timber reserves. Most of the forested area is in Siberia, but there are also valuable stands in the Caucasus. Plans were made late in 1948 for the planting of huge forest belts 60 to 90 mi. wide in the southern steppes to protect fertile food-producing areas from the dry winds of the central Asian and Caspian deserts.

**FISHERIES AND FURS.** The rivers, lakes and surrounding seas (except the Black Sea) are rich in fish; the catch averages more than 1,500,000 tons annually. The acquisition of former Japanese fisheries in Karafuto and the Kuriles will double the output of the Far Eastern fish industry. Trapping is an important secondary industry, especially in eastern Siberia.

**TOPOGRAPHY.** The U.S.S.R. is the largest unbroken political unit in the world, occupying more than one-seventh of the land surface of the globe. The greater part of its territory is a vast plain stretching from eastern Europe to the Pacific Ocean. This plain, relieved only occasionally by low mountain ranges (notably the Urals), consists of three zones running east and west: (1) the frozen marshy tundra of the Arctic; (2) the more temperate forest belt; and (3) the steppes or prairies to the south, which in southern Soviet Asia become sandy deserts. The topography is more varied in the South, particularly in the Caucasus between the Caspian and Black Seas, and in the Tien-Pamir mountain system bordering Afghanistan, Sinkiang and Mongolia. Mountains (Stanovoi and Kolyma) and great rivers (Amur, Yenisei, Lena) also break up the sweep of the plain in Siberia.

**CLIMATE.** The climate necessarily is varied, but for the most part is continental.

In general the climate of the northern and central regions is characterized by long, cold winters and by summers which are shorter and cooler than those in the northern part of the United States. Siberia has the coldest winters in the world; the January average at Verkhoyansk is  $-59^{\circ}$ . In the southern regions the climate varies between temperate and subtropical. The Uzbek, Turkmen and Kazakh S.S.R.'s are largely desert and semi-desert areas. In the central belt rainfall is fairly uniform, averaging about 15 inches east of the Urals and 20 inches to the west. In the tundra to the north it drops to about 8 inches and to 4 inches in the southern regions.

Average daily low temperature at Moscow is about  $5^{\circ}$  (high,  $14^{\circ}$ ) in January, the coldest month; average daily high is  $71^{\circ}$  during July, the warmest month.

## Uruguay (Republic)

(República Oriental del Uruguay)

Area: 72,172 square miles.

Population (est. 1949): 2,650,000 (predominantly of European extraction).

Density per square mile: 36.7.

President of Federal Council: Andrés Martínez Trueba.

Principal cities (est. 1948): Montevideo, 850,000 (capital); Paysandú, 50,000 (meat packing); Salto, 48,000 (cattle raising); Mercedes, 33,000 (farming center).

Monetary unit: Peso.

Language: Spanish.

Religion: Roman Catholic.

**HISTORY.** Uruguay, a little larger than North Dakota, has many distinctions. It is the smallest and most densely populated of the sovereign South American nations. It has one of the highest proportions of white population and one of the lowest illiteracy rates in all Latin America. Despite constant pressure from Argentina, and some concessions to that powerful neighbor, Uruguay has managed to remain one of the most democratic and progressive of Latin American states.

Juan Díaz de Solís, a Spaniard, discovered Uruguay in 1516, but the Portuguese were first to settle it when they founded Colonia in 1680. After a long struggle, Spain wrested the country from Portugal in 1778. Uruguay revolted against Spain in 1811, only to be conquered in 1816-20 by the Portuguese from Brazil. Independence was re-asserted with Argentine help in 1825, and the republic was set up in 1830. There followed a long period of factional strife between two groups still in existence at the present time—the Blancos and the Colorados. President José Batlle y Ordóñez launched a series of social reforms in 1911-15 which started Uruguay on its modern career of democracy, although Ga-

brief Terra, elected president in 1931, seized dictatorial power and modified the constitution to permit his re-election.

Terra was succeeded in 1933 by Alfredo Baldomir and, in 1943, by Juan José de Amézaga, both of whom worked closely with the U. S. on global and hemispheric policy. In 1946, Tomás Berreta was elected president; he took office March 1, 1947 for a four-year term and was replaced after his death on Aug. 2, 1947, by Luis Batlle Berres. The latter was succeeded on Mar. 1, 1951, by Andrés Martínez Trueba, who became President of the Federal Council effective Mar. 3, 1952.

**GOVERNMENT AND DEFENSE.** Under the 1934 Constitution, as amended in 1951, the executive power is exercised by a Federal Council of 9 members, 6 of the majority and 3 of the minority party, normally popularly elected for 4-year terms. There is a bicameral Congress composed of a 99-member Chamber of Deputies and a 31-member Senate elected for 4 years. All literate citizens may vote, including women, who may also sit in congress.

Service in the army (1950 strength: 26,000) is voluntary, but national guard service is compulsory in wartime. There is a police force of about 5,500, and a small air force. The navy has a 1,150-ton sloop, a surveying vessel and several smaller craft. **SOCIAL AND ECONOMIC CONDITIONS.** Uruguay's illiteracy rate is 35 per cent; primary education is compulsory, and all education is free. There was in 1950 a total of 212,509 pupils in 1,722 public schools and 11,948 students in the university at Montevideo. Uruguay's high percentage of white population includes many foreign-born, mostly Italian and Spanish, but there are some Brazilian, Argentine and French.

Cattle, sheep, meat and wool dominate the Uruguayan economy. With nearly 80 per cent of its grassy land devoted to grazing, there were in 1951, 23,408,642 sheep and 8,665,656 cattle. Wool production in 1952 was 51,000 metric tons, clean. With only about 5 per cent of the land cultivated, a third of this grows wheat, the chief crop (1951-52: 472,571 metric tons). Other crops are corn, flax for linseed, oats, potatoes, beans, fruits, tobacco, alfalfa and grapes. Wine production in 1952 was about 25,400,000 U. S. gallons.

Uruguay slaughters more than two million head of cattle and sheep a year, and meat processing is the largest manufacturing industry. There are many modern plants for chilling or freezing meat, and plants for liquid extract of beef.

During World War II Uruguay doubled its foreign trade, and most of the increase went to the U. S. Recent data are as follows (in millions of U. S. dollars):

	1950	1951	1952
Exports	254.3	236.3	208.9
Imports	199.6	315.6	236.6

In value, wool was the chief export (33%) in 1952, followed by beef and mutton (17%) and hides and skins (11%). Chief customers were the U. S. (24%), Britain (16%) and Brazil (12%). The U. S. (24%) and Britain (11%) were the principal suppliers. Leading imports included machinery, vehicles, gasoline, textiles and sugar.

Steamers of 14-foot draft can travel half-way up the Uruguay River border, and smaller craft can go nearly the length of that border. The Río Negro is navigable only in its lower course. Railway mileage in 1949 totaled 1,874. Prior to 1948, 90 per cent was British-owned, but in that year the government purchased complete interest. Road mileage was 26,000 in 1948, of which 3,051 mi. were paved.

Actual government expenditure in 1951 was 387,000,000 pesos; revenue, 357,500,000 pesos. The funded public debt on May 31, 1952, was 898,808,000 pesos.

Minerals are of slight importance. In the north, some gold is mined and there are small deposits of silver, lead, copper, talc and lignite.

**TOPOGRAPHY AND CLIMATE.** Uruguay, a low rolling plain in the south and a low plateau in the north, has a 120-mile Atlantic shore line, a 235-mile frontage on the Río de la Plata, and 270 miles on the Uruguay River, its western boundary. The climate is good. Average summer temperature in January and February is 71°, and average winter temperature in July is 50°. Frost is almost unknown. Average rainfall is 35 inches, heaviest in the autumn.

## Vatican City State

(Stato Città Vaticana)

Area: 108.7 acres.

Population (est. 1948): 800 (Italian, 85%; Swiss and others, 15%).

Ruler: The Supreme Pontiff, Pius XII.

Monetary unit: Lira.

Languages: Latin, Italian.

Religion: Roman Catholic.

The Vatican City State, sovereign and independent, is situated on the Vatican hill on the right bank of the Tiber in northwest Rome. The area has been intimately associated with the history of the Roman Catholic Church since the time of the martyrdom of St. Peter. From it the Pope exercised temporal sway for many centuries over a large part of central Italy; in 1859 the Papal States comprised an area of some 17,000 square miles. During the struggle for Italian unification (1860-70), most of this area became part of Italy.

By an Italian law of May 13, 1871, the temporal power of the Pope was abrogated, and the territory of the Papacy was confined to the Vatican and Lateran palaces and the Villa of Castel Gandolfo. The Popes consistently refused to recognize this arrangement, and by the Lateran Treaty of Feb. 11, 1929, between the Vatican and the Kingdom of Italy, the exclusive dominion and sovereign jurisdiction of the Holy See over the city of the Vatican was again recognized, thus restoring the Pope's temporal authority over the area. Accompanying the treaty were conventions regulating the position of the Catholic Church in Italy and providing for reimbursement to the Vatican in final settlement of the claims of the Holy See against Italy for the loss of temporal power in 1870-71.

The Supreme Pontiff is Pius XII (Eugenio Pacelli), born at Rome, March 2, 1876, proclaimed cardinal in 1929, and elected Pope on March 2, 1939.

The Pope has full legal, executive and judicial powers. Executive power over the area is in the hands of a governor appointed by the Pope and exclusively responsible to him.

The College of Cardinals is the Pope's chief advisory body, and upon his death the cardinals elect his successor for life. The cardinals themselves are created for life by the Pope. When complete, the College consists of 70 members.

The central administration of the Roman Catholic Church throughout the world is carried on in the Vatican by 12 congregations, 3 tribunals and 5 offices.

In its diplomatic relations with foreign countries, the Vatican is represented by the Papal Secretary of State. In 1952 the Vatican maintained diplomatic relations with 39 states through its papal-nuncios (ambassadors) and inter-nuncios (ministers). Apostolic Delegates, representatives without accredited rank, are maintained in a number of other countries.

The Vatican has its own railway station, postal facilities, coinage, newspaper, radio and television system. In addition to the Vatican itself, which includes St. Peter's Square, extraterritorial rights are enjoyed in 13 buildings in the city of Rome outside Vatican City.

## Venezuela (Republic)

(Estados Unidos de Venezuela)

Area: 352,143 square miles.

Population (census 1950): 4,985,716\* (mestizo, 65%; white, 20%; Negro, 8%; Indian, 7%).

Density per square mile: 14.2\*

President: Col. Marcos Pérez Jiménez.

Principal cities (census 1950)\*: Caracas,

187,963 (capital); Maracaibo, 232,188 (oil); Barquisimeto, 155,980 (coffee, sugar, mining); Valencia, 88,674 (farming center).

Monetary unit: Bolívar.

Language: Spanish.

Religion: Roman Catholic.

\*Provisional; excludes tribal Indians, estimated at 105,120.

**HISTORY.** Venezuela, a third larger than Texas, has a stormy political past and the distinction of being the world's second greatest producer of oil, outranked only by the U. S. Simón Bolívar, who led the liberation of much of the continent from Spain, was born in Caracas.

Columbus discovered Venezuela on his third voyage in 1498. A subsequent Spanish explorer, for reasons of his own, gave the country its name, meaning "Little Venice." There were no important settlements until Caracas was founded in 1567. With Bolívar taking part, Venezuela was one of the first South American colonies to revolt against Spain in 1810, but it was not until 1821 that independence was won. Federated at first with Colombia and Ecuador, the country set up a republic in 1830, and then sank for many decades into a condition of revolt, dictatorship and corruption climaxed by the ironhand regime of Antonio Guzmán Blanco from 1870 to 1889. The U. S. intervened in 1895 to force an arbitration between Great Britain and Venezuela in a dispute over the boundary with British Guiana. From 1908 to 1935, when he died, General Juan Vicente Gómez ruled tyrannically over the nation, picking various satellites to alternate with him in the presidential palace. He was succeeded in 1936 by General Eleazar López Contreras. The president during World War II, General Isaias Medina Angarita, co-operated with the U. S. but permitted such political freedom that he was overthrown on Oct. 19, 1945.

Out of that revolt, militarist in nature, the Socialist leader Dr. Rómulo Betancourt emerged as provisional president, and his government received U. S. recognition on Oct. 30, 1945. Betancourt's party, the liberal Acción Democrática, won 137 out of 160 seats in an election held Oct. 27, 1946, for a Constituent Assembly to draft a new constitution. The well-known writer, Rómulo Gallegos, easily won the presidential election of Dec. 14, 1947, as the candidate of Acción Democrática.

On Nov. 24, 1948, the Venezuelan army ousted Gallegos and established a military junta which was reconstituted on Nov. 27, 1950. Following elections for a constituent assembly on Nov. 30, 1952, the junta presented its resignation to the army, which named Col. Marcos Pérez Jiménez as provisional president on Dec. 2, 1952. His selection was confirmed by the constituent assembly.

**GOVERNMENT AND DEFENSE.** Venezuela is a union of 20 states, a federal district and two territories. Before November, 1948, Congress had a 46-member senate and a 110-member chamber of deputies, both elected directly. Under the constitution promulgated July 5, 1947, the president was elected by popular vote for five years and could not succeed himself. The constitution (Venezuela's 20th) established comprehensive political and social rights, including woman suffrage.

Military service is compulsory, with a one- to three-year initial training period. The army has about 10,000 men. The navy has several gunboats, corvettes, and other minor craft. There is a small air force.

**SOCIAL AND ECONOMIC CONDITIONS.** Illiteracy in 1949 was estimated at 60 per cent. Primary education between ages of 7 and 14 is compulsory. In Oct. 1949, 464,697 were enrolled in more than 5,300 primary schools; secondary and special schools numbered 175 with 32,548 students in Jan. 1952. There are three universities—Los Andes at Mérida, Central University at Caracas, and Zulia at Maracaibo.

Agriculture engages the majority of the population, but production has failed to keep pace with the food needs of the rapidly increasing population. The principal crop is coffee, grown on 60,000 plantations on the slopes of the coastal mountains. Annual production averages 1,000,000 bags of 60 kilograms each. Exports of cacao in 1952 were 15,173 metric tons. Other important crops are sugar, tobacco, cotton, corn, wheat and tropical fruits. Stockraising, centered east of Lake Maracaibo, and on the llanos, is important. In 1950 there were 5,359,654 cattle and 1,292,808 hogs.

There are few industries, the most important being woodworking, cotton textiles and tobacco products. Electric power is plentiful, and a law of 1943 prepared the way for the beginning of an oil refining industry. The 15 oil refineries and topping plants in 1952 had an output of about 126,600,000 bbl. In 1952, 2,482,085,000 cigarettes and 840,365 metric tons of cement were produced.

Oil, most of which is found on the northwest shore of Lake Maracaibo, is by far the dominant factor in the economy. It accounts for 95 per cent of exports, gives the country a big foreign trade balance and a treasury surplus. Recent foreign trade statistics, in millions of bolívares:

	1950	1951	1952
Exports	3,892.2	4,533.7	4,858.4
Imports	1,798.4	2,150.3	2,420.7

In 1952 the U. S. supplied 68% of the imports; Britain, 7%. Leading imports were machinery and equipment, metals and

manufactures, foodstuffs, beverages and textiles. In addition to petroleum (96%), the chief exports were iron ore, coffee and cacao. Most of the oil goes to the U. S. via the islands of Curaçao and Aruba, refining centers in the West Indies. In 1950, those islands took 52% of the exports; the U. S., 30%.

Highways include 3,829 miles for all-weather use, and 1,600 miles of unimproved road. Railway mileage is about 685, largely in unconnected short lines, ten national and two British-owned. There is an extensive air service. La Guaira and Puerto Cabello are the chief seaports. Navigable rivers total 6,500 miles. Most of the tonnage sent along the Orinoco—navigable for 700 miles for river steamers of 12-foot draft—is transhipped at Port of Spain, Trinidad.

The 1952-53 budget was balanced initially at 2,300,000,000 bolívares. There is no foreign debt.

Oil production increased from 116,000,000 barrels in 1931 to 660,215,000 barrels in 1952 (1951: 622,194,695 barrels). In addition to oil, Venezuela has gold mines in the region southwest of the Orinoco delta. Output in 1952 was 4,800 troy oz. Of minor importance are bauxite, coal, copper, tin, asbestos and asphalt. Diamond production in 1952 was 98,280 carats. A subsidiary of Bethlehem Steel Corp. began the mining of iron ore in the El Pao area south of the Orinoco river in 1950, while a U. S. Steel Corp. subsidiary went ahead with preliminary development operations on a rich "iron mountain" south of Ciudad Bolívar on the Orinoco.

Much of the country is covered by forests still barely exploited, particularly south of the Orinoco. One of the oldest industries is the pearl fisheries off Margarita, Coche and Cubagua islands.

**TOPOGRAPHY AND CLIMATE.** An unusual setting of mountain systems breaks Venezuela into four distinct areas: (1) the Maracaibo lowlands; (2) the mountainous region in the north and northwest; (3) the Orinoco basin with the llanos (vast grass-covered plains) on its northern border and great forest areas in the south and southeast; (4) the Guiana highland, south of the Orinoco, accounting for nearly half the national territory. About 80 per cent of Venezuela is drained by the Orinoco and its 400 tributaries. The coast line, 1,876 miles long, is indented in the northwest by the Gulf of Maracaibo. A narrow channel joins the gulf to Lake Maracaibo, which is nearly the size of Lake Ontario.

The climate is tropical and unhealthy except where modified by altitude; it approaches the mild temperate in the higher western mountains. Most rainfall occurs

between April and October, and the rest of the year is dry. At La Guaira, the mean annual temperature is 81°, at Caracas, 70°, at Cumaná, 83°.

## Yugoslavia (Republic)

### (Federatona Narodna Republika Jugoslavija)

Area: 99,181 square miles.  
Population (census 1953)\*: 16,927,275 (1931: Serbian, 46%; Croat, 28.5%; Slovene, 8.5%; German, 3.6%; others [Magyar, Albanian, Rumanian, Czech], 13.4%).

Density per square mile: 170.7.

President: Josip Broz (Tito).

Principal cities (census 1953)\*: Belgrade (Beograd), 469,988 (capital); Zagreb, 350,452 (Croat commercial center); Ljubljana, 138,211 (Slovenian industrial center); Sarajevo, 135,657 (Bosnian manufacturing center); Skopje, 121,551 (capital, Macedonia); Subotica, 115,402 (wheat).

Monetary unit: Dinar.

Languages: Serbo-Croat, Slovene, Macedonian (all official).

Religions (est. 1952): Greek Orthodox, 49.6%; Roman Catholic, 36.8%; Moslem, 12.5%; others, 1.1%.

\* Provisional returns.

**HISTORY.** Yugoslavia, twice the size of Pennsylvania and fronting on the Adriatic Sea opposite Italy, was formed in 1919 out of some of Europe's oldest trouble spots in the Balkans. After a brief and unstable history of 25 years, it emerged from World War II as a Russian satellite. World amazement, however, followed an attack made June 28, 1948, by the Soviet-dominated Cominform on Marshal Tito and the Yugoslav Communist party for inspiring a "hateful" policy against the Soviet Union and retreating from the Communist line in foreign and domestic policies. Unlike other officials similarly attacked by Soviet organs in the past, Tito denounced the Cominform's action and still continued in full power despite further repeated attacks by the Cominform and members of the Soviet east European bloc. On Sept. 29, 1949, the Soviet Union denounced its 1945 treaty of friendship with Yugoslavia.

The 1919 components of Yugoslavia were the old kingdoms of Serbia and Montenegro, and the following: Bosnia-Herzegovina, formerly administered jointly by Austria and Hungary; Croatia-Slavonia, which had had limited autonomy under Hungary; and Slovenia and Dalmatia, formerly administered by Austria.

Alexander I, son of King Peter of Serbia, became the first king of the new country on Aug. 16, 1921. His reign was a rocky one because the Croats, under Dr. Stephen Radić, unceasingly sought autonomy. Finally, a Croat assassinated Alexander in Marseille in Oct., 1934, and since his son

Peter was a minor, a regency was set up under Prince Paul, the new king's uncle.

After pursuing an increasingly pro-Axis policy under the regent, Yugoslavia signed the Axis Pact on March 25, 1941; this caused the overthrow of the government two days later. On April 6 the country was invaded by the Nazis and was speedily occupied. While the king and government fled to the Near East and later to London, Yugoslavia was divided into German, Italian, Hungarian and Bulgarian occupation zones. Puppet regimes were established in Croatia and Serbia.

Inside Yugoslavia, the Axis occupation was fought by two guerrilla armies—the Chetniks under Draža Mihailović, who supported the monarchy; and the Partisans under Marshal Tito (Josip Broz), who leaned toward Russia. These two groups fought not only the Germans, but also each other. In Nov., 1943, Tito established an Executive National Committee of Liberation to act as a provisional government, thus repudiating King Peter in exile.

In the elections of Nov. 11, 1945, Tito's forces won overwhelmingly, partly because the monarchist factions boycotted the balloting. Convening on Nov. 29, the new Assembly abolished the monarchy and set up the Federal People's Republic of Yugoslavia. Tito was prime minister, and his government won British and U. S. recognition.

The Tito government embarked upon an internal policy of ruthless oppression and elimination of opposition factions, including the summary trial and execution of Mihailović in 1946. In April, 1947, it initiated a five-year plan aimed at improvement of agriculture and heavy expansion of industry.

Externally the government pursued, until 1948, its uncompromising support of Moscow, as manifested by Yugoslav aid to anti-government Greek guerrillas, which had led to a U. N. inquiry in 1947. Soviet support enabled the nation to secure most of Italian Istria under the 1947 peace treaty, but efforts to secure sovereignty over the key port of Trieste were unsuccessful.

Soviet hostility after 1948 remained implacable until 1953, when a seemingly softer attitude was adopted. Meanwhile, Yugoslavia's relations with the western powers gradually improved.

Tito was elected president under the new constitution on Jan. 14, 1953.

**GOVERNMENT AND DEFENSE.** Under the 1953 constitution Yugoslavia is a federal republic composed of six units—Serbia (which includes the autonomous province of Vojvodina and the autonomous region of Kosovo-Metohija), Croatia, Slovenia, Bosnia-Herzegovina, Macedonia and Montenegro. Executive power is vested in the

federal executive council of 30 to 45 members elected by and from the federal assembly, and presided over by the president of the republic, who is elected by and is responsible to the federal assembly. The assembly consists of (1) a federal council of 371 members, 276 of whom are popularly elected and (2) a council of producers, elected by organized producing citizens in agriculture, industry and the crafts. Actual administration is carried on by 5 state secretaries responsible to the executive council. Actual control of the country remains with the Yugoslav Communist party, which had 779,382 members on June 30, 1952.

The army, based upon the National Liberation Army and partisan detachments which at one time had a strength of about 800,000, was unofficially estimated to number from 500,000 to 600,000 in 1951, including police forces. Equipment generally is poor. The air force had about 600 planes in 1950. The navy was believed to include 3 submarines and 4 escort vessels on Jan. 1, 1953. It received several small ships from the Italian fleet in 1948.

#### **SOCIAL AND ECONOMIC CONDITIONS.**

Education on the elementary level is compulsory and free. In 1950-51, there were 13,031 elementary schools with 1,524,987 pupils, 1,696 secondary schools with 485,876 students and 1,449 technical schools with 193,478 students. The various universities and technical colleges had a total enrollment of 60,395.

Agriculture occupies about 80 per cent of the population. The principal crops are corn, wheat, sugar beets, hemp, hops, opium (in Macedonia) and tobacco (chiefly in Macedonia and Herzegovina). Crop figures in 1952 were as follows, in metric tons: wheat, 2,274,400; maize, 1,470,100; sugar beets, 1,160,000; tobacco, 14,800; potatoes, 1,136,000; flax, 10,000. Excellent wines are produced in Dalmatia and Herzegovina and along the Danube (production 1952: 80,000,000 U. S. gallons). The fruit industry is important, especially in Serbia and Bosnia. Wool production in 1952 was 17,000 metric tons.

Manufactures are limited for the most part to consumers' goods. Legislation passed Dec. 5, 1946, nationalized all private economic enterprises, public works and industries in 42 branches of the national economy including mining, metallurgy, all industries processing natural products, food processing, beverages, building, transportation, and all land, sea and air communications.

Yugoslavia has only limited access to

ports on the Adriatic because of the difficulty in crossing the coastal range with railways and highways. Waterways, especially the Danube, are important. The merchant marine in 1952 totaled 117 vessels (of over 100 tons) with a gross tonnage of 250,581. Railway mileage in 1949 was 7,223; highway mileage in 1950, 30,184.

Recent trade data are as follows (in billions of dinars):

	1950	1951	1952*
Exports	7.93	9.18	73.96
Imports†	13.10	19.54	111.92

\* The dinar was devalued Jan. 1, 1952. † Including imports in aid.

Chief exports in 1952 were maize (22%), sawn timber (9%) and refined lead (8%). Leading customers were western Germany (24%), the U. S. (15%) and Britain (14%); leading suppliers, western Germany (20%), the U. S. (19%) and Italy (8%). Chief imports were wheat and flour (17%), cotton (6%) and coke (4%). Imports in aid totaled 30,492,373,000 dinars in 1952.

The 1952 budget (computed at free market prices as opposed to fixed prices used in prior years) balanced revenue and expenditure at 341,559,600,000 dinars.

Yugoslavia is the Balkans' principal mineral producer. Production in 1952 was as follows, in metric tons: coal, 7,853,000; lignite, 4,245,000; blister copper, 32,019; iron ore, 676,000; chrome (concentrates), 25,827; bauxite, 577,200; manganese ore, 12,687; refined lead, 67,180; raw zinc, 14,463; silver, 257,000 oz. Uranium deposits have been reported. The nation possesses a high potential of hydroelectric power, used often in mine development.

Forests cover about 30 per cent of the country, with beech, fir and oak common. **TOPOGRAPHY AND CLIMATE.** About half of Yugoslavia is mountainous. In the north, the Dinaric Alps rise abruptly from the sea and progress eastward as a barren limestone plateau called the Karst. Montenegro is a jumbled mass of mountains, containing also some grassy slopes and fertile river valleys. Southern Serbia, too, is mountainous. A rich plain in the north and northeast, drained by the Danube, is the most fertile area of the country.

The Danube and tributaries—the Drava, Sava and Morava—in the northeast are the principal rivers. On the Adriatic, Yugoslavia's climate is mild and Mediterranean, but in the interior the winters are cold and the summers hot. January temperatures in Belgrade average about 30°, and summer temperatures are usually in the 70's. Rainfall is heaviest throughout the country from October to January.

## Explorations and Discoveries

## Africa

Country or place	Event	Explorer or discoverer	Date
Sierra Leone	Visited	Hanno, Carthaginian seaman	c. 520 B.C.
Congo River	Mouth discovered	Cão, Portuguese navigator	c. A.D. 1484
Cape of Good Hope	Doubled	Bartholomew Diaz, Portuguese navigator	1488
Gambia River	Explored	Mungo Park, Scottish explorer	1795
Sahara Desert	Crossed	Denham and Clapperton, English explorers	1822-23
Zambezi River	Discovered	Livingstone, Scottish explorer	1851
Sudan	Explored	Barth, German explorer	1852-55
Victoria Falls	Discovered	Livingstone	1855
Lake Tanganyika	Discovered	Burton and Speke, British explorers	1858
Congo River	Traced	Stanley, British explorer	1877

## Asia

Punjab (India)	Visited	Alexander the Great	327 B.C.
China	Visited	Marco Polo, Italian traveler	c. A.D. 1272
Tibet	Visited	Odoric, Italian monk	c. 1325
Southern China	Explored	Conti, Italian adventurer	c. 1440
India	Visited by Cape route	Vasco da Gama, Portuguese navigator	1498
Japan	Visited	St. Francis Xavier of Spain	1549
Arabia	Explored	Niebuhr, German explorer	1762
China	Explored	Richthofen, German scientist	1868
Mongolia	Explored	Przhevalsky, Russian explorer	1870-73
Central Asia	Explored	Hedin, Swedish scientist	1890-1908

## Europe

Shetland Islands	Visited	Pytheas of Massilia (Marseille)	c. 325 B.C.
North Cape	Rounded	Ottar, Norwegian explorer	c. A.D. 870
Iceland	Colonized	Norwegian noblemen	c. 890-900

## North America

Greenland	Colonized	Eric the Red, Norwegian navigator	c. A.D. 985
Labrador; Nova Scotia (?)	Discovered	Leif Ericsson, Norwegian explorer	1000
West Indies	Discovered	Christopher Columbus, Italian navigator	1492
North America	Coast discovered	John Cabot, for British	1497
Pacific Ocean	Discovered	Balboa, Spanish explorer	1513
Florida	Explored	Ponce de León, Spanish explorer	1513
Mexico	Conquered	Cortez, Spanish adventurer	1519
St. Lawrence River	Discovered	Cartier, French navigator	1534
Southwest U. S.	Explored	Coronado, Spanish explorer	1540-42
Colorado River	Discovered	Alarcón, Spanish explorer	1540
Mississippi River	Discovered	Hernando de Soto, Spanish explorer	1541
Frobisher Bay	Discovered	Frobisher, English seaman	1576
Maine Coast	Explored	Champlain, French explorer	1604
Jamestown, Va.	Settled	Smith, English colonist	1607
Hudson River	Explored	Hudson, English navigator	1609
Hudson Bay (Canada)	Discovered	Hudson	1610
Baffin Bay	Discovered	Baffin, English navigator	1616
Lake Michigan	Navigated	Nicolet, French explorer	1634
Arkansas River	Discovered	Marquette and Joliet, French explorers	1673
Mississippi River	Explored	LaSalle, French explorer	1682
Bering Strait	Discovered	Bering, Danish explorer	1728
Alaskan Coast	Sighted	Gvosdeff, Russian sailor	1731
Mackenzie River (Canada)	Discovered	Mackenzie, Scottish-Canadian explorer	1789
Northwest U. S.	Explored	Lewis and Clark	1804-06
Northeast Passage (Arctic Ocean)	Navigated	Nordenskiöld, Swedish explorer	1879
Greenland	Explored	Peary, American explorer	1892
Northwest Passage	Navigated	Amundsen, Norwegian explorer	1906

## South America

Country or place	Event	Explorer or discoverer	Date
Continent	Visited	Columbus, Italian navigator	1498
Brazil	Discovered	Cabral, Portuguese explorer	1500
Peru	Conquered	Pizarro, Spanish explorer	1532-33
Amazon River	Explored	Orellana, Spanish explorer	1541
Cape Horn	Discovered	Schouten, Dutch navigator	1615

## Oceania

New Guinea	Visited	Menezes, Portuguese explorer	1526
Australia	Visited	Jansz, Dutch explorer	1606
Tasmania	Visited	Tasman, Dutch navigator	1642
Australia	Explored	Sturt, English explorer	1828
Australia	Explored	Burke and Wills, Australian explorers	1861

## Arctic, Antarctic and Miscellaneous

Ocean exploration	Expedition	Magellan's ships circumnavigated the globe	1519-22
Spitsbergen	Visited	Barents, Dutch navigator	1596
(Arctic Europe)			
Antarctic Circle	Crossed	Cook, English navigator	1773
Antarctica	Discovered	Palmer, U S. explorer (archipelago) and Bellingshausen, Russian navigator (mainland)	1820-21
Antarctica	Explored	Wilkes, American explorer	1840
North Pole	Discovered	Pearry, American explorer	1909
South Pole	Discovered	Amundsen, Norwegian explorer	1911

## The Seven Wonders of the World

## THE PYRAMIDS OF EGYPT

A group of three pyramids, *Khufu*, *Khafra* and *Menkaura* at Giza, outside modern Cairo, is often called the first wonder of the world; it is also the oldest and only surviving "wonder." The largest pyramid, built by Khufu (Cheops), had an original estimated height of 482 ft. (now approximately 450 ft.). The exact date of its construction is unknown but has been variously estimated as early as 4700 B.C. or as late as 2900 B.C.

## HANGING GARDENS OF BABYLON

Often listed as the second wonder, these gardens were supposedly built by Nebuchadnezzar about 600 B.C. to please his queen, *Amuhia*. They are also associated with the mythical Assyrian Queen, *Semiramis*. Archeologists surmise that the gardens were laid out atop a vaulted building, with provisions for raising water. The terraces were said to rise from 75 to 300 ft.

The Walls of Babylon, also built by Nebuchadnezzar, are sometimes referred to as the second (or the seventh) wonder instead of the Hanging Gardens.

STATUE OF ZEUS (JUPITER)  
AT OLYMPIA

The work of Phidias (5th century B.C.), this colossal figure in gold and ivory was reputedly 40 ft. high. All trace of it is lost, except for reproductions on coins.

TEMPLE OF ARTEMIS (DIANA)  
AT EPHEBUS

A beautiful structure, begun about 350 B.C. in honor of a non-Hellenic goddess who later became identified with the Greek goddess of the same name. The temple, with Ionic columns 60 feet high, was destroyed by invading Goths A.D. 262.

## MAUSOLEUM AT HALICARNASSUS

This famous monument was erected by Queen Artemisia in memory of her husband, King Mausolus of Caria in Asia Minor, who died in 353 B.C. Some remains of the structure are in the British Museum. This shrine is the source of the modern word "mausoleum."

## COLOSSUS AT RHODES

This bronze statue of Helios (Apollo), about 105 ft. high, was the work of the sculptor Chares, who reputedly labored for 12 years before completing it in 280 B.C. It was destroyed during an earthquake in 224 B.C.

## PHAROS OF ALEXANDRIA

The seventh wonder was the Pharos (lighthouse) of Alexandria, built by Sosstratus of Cnidus during the 3rd century B.C. on the island of Pharos off the coast of Egypt. It was destroyed by an earthquake in the 13th century.

Population, Land Areas of the World and World Elevations

Area	Estimated population, in thousands	Approximate area, in thousands of sq. mi.	Per cent of total land area	Population density per sq. mi.	Highest	Elevation, feet	Lowest	Dimensions, miles East-North-West South

## Famous Waterfalls of the World

Waterfall	Location	River	Height, feet
Angel	Venezuela	.....	3,300
Cuquenán, or Kukuenaam	Venezuela-British Guiana	Cuquenán	2,000
Sutherland	South Island, N. Z.	Arthur	1,904
Tugela	Natal, South Africa	Tugela	1,800
Ribbon (Yosemite)	California	Creek, flowing into Yosemite	1,612
Upper Yosemite	California	Yosemite Creek, tributary of Merced	1,430
Gavarnie	Southwestern France	Gave de Pau	1,385
Takkakaw	British Columbia	Tributary of Yoho	1,200
Widow's Tears (Yosemite)	California	Tributary of Merced	1,170
Staubbach	Switzerland	Staubbach (Lauterbrunnen valley)	980
Trummelbach	Switzerland	Trummelbach (Lauterbrun- nen)	950
Middle Cascade (Yosemite)	California	Yosemite Creek, tributary of Merced	910
Multnomah	Oregon	Multnomah Creek, tributary of Columbia	850
Vettisfos	Norway	Morkedöla	850
King Edward VII	British Guiana	Courantyne	840
Gersoppa	India	Sharavati	830
Kaleteur	British Guiana	Pataro	741
Kalambo	Tanganyika- N. Rhodesia	.....	705
Fairy (Mt. Rainier Park)	Washington	Stevens Creek	700
Maradalsfos	Norway	Stream flowing into Ejks- dalsvand (lake)	650
Skykkjefos	Norway	In Skykkjedal (valley) of In- ner Hardanger Fiord	650
Terni	Italy	Velino, tributary of Nera	650
Maletsunyane (Le Bihan)	Basutoland, Africa	Maletsunyane	630
Bridal Veil (Yosemite)	California	Bridal Veil Creek, tributary of Merced	620
Nevada (Yosemite)	California	Merced	594
Voringfos	Norway	Bjorela	535
Skjaeggedalsfos	Norway	Tyssaa	525
Marina	British Guiana	Tributary of Kuribrong, a tributary of the Pataro	500
Tequendama	Colombia	Bogotá	450
King George's	Cape Province, South Africa	Orange	450
Herval Cascades	Brazil	.....	400
Guayra	Paraguay-Brazil	Paraná	374
Illilouette (Yosemite)	California	Illilouette Creek, tributary of Merced	370
Granite (Mt. Rainier Park)	Washington	Granite Creek	350
Splendor of Sun	Nikko, Japan	.....	350
Victoria	Southern Rhodesia	Zambezi	343
Comet (Mt. Rainier Park)	Washington	Van Trump Creek	320
Lower Yosemite	California	Yosemite Creek	320
Vernal (Yosemite)	California	Merced	317
Virginia	Northwest Terri- tories, Canada	South Nahanni, tributary of Mackenzie	315
Lower Yellowstone	Wyoming	Yellowstone	308
Grand	Labrador, Canada	Hamilton	302

# PRINCIPAL DESERTS OF THE WORLD

Desert	Location	Approximate size	Approximate elevation, ft.	Features
Atacama.....	North Chile.....	400 mi. long.....	7,000-13,500.....	Rugged. Rich in minerals, particularly nitrates. Usually dry, with a white alkali crust. Serves as the "sink" of the Quino River and at times covered with water a few inches deep.
Black Rock.....	Northwest Nevada.....	70 mi. long and in places 20 mi. wide, or about 1,000 sq. mi.	2,000-5,000.....	Average 90° F. Has reached 125° F. in the shade. Contains Salton Sea (overflow of Colorado). A salt depression. Vast deposits of solid rock salt. Sand desert.
Colorado.....	Southeast California from San Geronio Pass to Gulf of California	200 mi. long and a maximum width of 50 mi.	Few feet above to about 250 below sea level	Sandy soils with much alkali. Some well-watered areas. Several caravan routes. Fossil remains. Series of arid plateaus with scattered oases.
Dash-i-Kavir.....	Southeast of Caspian Sea in Iran.....	800 by 400 mi., or at least 300,000 sq. mi.	1,000.....	Stony with numerous wadis (dry stream beds). Almost waterless but rich in pasture in the rainy season (winter and spring). Large sand dunes. Waterless but rich in pasture in winter and spring.
Dashi-i-Lut.....	Northeast of Kerman in Iran.....	800 by 400 mi., or at least 300,000 sq. mi.	3,000-5,000.....	Waterless but rich in pasture in winter and spring.
Gobi (Shamo or "Desert of Sand").....	Covers most of Mongolia.....	1,500 mi. long.....	1,350.....	Areas of "fixed dunes" and stony ("gibbers") wastes.
Great Arabian.....	Most of Arabia.....	400 mi. long and average of 200 mi. wide.	2,000.....	Salt desert with numerous salt flats. Some used in setting world automobile speed records.
Syrian (El Hamad).....	North of 30° N. Latitude.....	400 by 30 mi.....	4,500.....	Mild climate. Red sand. Some vegetation and game.
Nefud (Red Desert).....	South of Jaufr.....	80 by 50 mi.....	Over 3,000.....	Flat sandy wastes interspersed with broad expanses of clay soil. Water found only in wells.
Dahna.....	Southeast of Nefud.....	400 by 600 mi., or about 120,000 sq. mi.....	160 near Lake Aral to 2,000 in southeast	Arid grazing land. Numerous sand dunes moving southeast.
Rub' al Khali.....	South portion of Nejd.....	110,000 sq. mi.....	2,000.....	Temperature range 70°-125° F. during summer months. Hot dry alkali flats interspersed with salt-pans or lakes. Scanty vegetation.
Great Australian.....	Western portion of Australia.....	370 by 220 mi., or about 70,000 sq. mi.....	High plateau 5,000.....	Mild climate. Named for its bright colorful rocks.
(Includes: Great Sandy; West of Great Salt Lake to Nevada-Utah line.)	Gibson; Great Victoria; Arunta.....	400 by 600 mi., or about 120,000 sq. mi.....	440 below sea level to 11,000 above with an average elevation of 1,400-1,600	Varied surface. East Libyan desert is sand; central part contains rocky hills and mountains; west consists of low stony plains and dunes. Crossed by chain of oases. Well-marked caravan routes.
Great Salt Lake.....	West of Great Salt Lake to Nevada-Utah line.	80 by 50 mi.....	More than 50,000 sq. mi.....	Series of deep depressions, some below sea level. Famous caravan routes through oases such as Kharga, Dakhla, Farafra, Bahariya, Siwa and Cufrat.
Kalahari.....	South Africa between the Orange and Zambesi Rivers	400 by 600 mi., or about 120,000 sq. mi.....	2,500.....	Sand and rock desert with some small fertile oases
Kara Kum (Desert of Khiva or "Black Sands").....	Southwest Turkistan south of Lake Aral	370 by 220 mi., or about 70,000 sq. mi.....	.....	Extremes of climate: -22°-36° F. in April. Uninhabited. Can be safely crossed only in winter.
Kizil Kum.....	Central Turkistan southeast of Lake Aral	15,000 sq. mi.....	About 500.....	Marco Polo left a vivid description of this desert. Sandy with strips of cultivable land.
Mohave.....	North of Colorado Desert and south of Death Valley in southeast California	75 mi. wide.....	.....	
Painted Desert.....	Northwest Arizona.....	3,200 mi. greatest length along 20° N. Lat.; width varies from 800 to 1,400 mi. Area over 3,500,000 sq. mi.	.....	
Sahara.....	Northern states of Africa to about 15° N. Lat. and from Red Sea to the Atlantic Ocean	More than 50,000 sq. mi.....	.....	
Libyan.....	East portion of the Sahara west of Nile	750 mi. long.....	.....	
Nubian.....	From Red Sea to great west bend of the Nile	About 300 mi. by 380 mi.....	.....	
Takla Makan.....	S. Central Sinkiang in Tarim Basin	.....	.....	
Thar (Indian).....	Chiefly Rajputana, India.....	.....	.....	

## Principal Rivers of the World

River	Source	Outflow	Approx. length, miles
Nile	Lake Victoria	Mediterranean Sea	4,000
Missouri-Mississippi	Source of Red Rock Creek, Montana	Gulf of Mexico	3,988
Amazon	Glacier-fed lakes, Peru	Atlantic Ocean	3,900
Ob	Altai Mts., U.S.S.R.	Gulf of Ob	3,200
Yangtze Kiang	Tibetan plateau	China Sea	3,100
Amur	Confluence of Shlika (U.S.S.R.) and Argun (Manchuria) Rivers	Tartary Strait	2,900
Congo	Between Lakes Nyasa and Tanganyika	Atlantic Ocean	2,900
Lena	Baikal Mts., U.S.S.R.	Arctic Ocean	2,800
Yenisei	Tannu Ola Mountains, western Mongolia	Arctic Ocean	2,800
Hwang Ho (Yellow)	East part of Kunlun Mts., west China	Gulf of Chihli	2,700
Niger	Border of Sierra Leone	Gulf of Guinea	2,600
Mackenzie	Head of Finlay River, British Columbia	Beaufort Sea (Arctic Ocean)	2,514
Mékong	Tibetan highlands	South China Sea	2,500
Missouri	Actual headwaters Red Rock Creek; beginning of Missouri at conflu- ence of Gallatin, Mad- ison, Jefferson Rivers	Mississippi River	2,475 (confluence) 2,723 (headwaters)
Mississippi	Lake Itasca, Minnesota	Gulf of Mexico	2,470
Paraná	Confluence of Paranaíba and Grande Rivers, southeast Brazil	Rio de la Plata (Atlantic Ocean)	2,450
Murray	Australian Alps, New South Wales	Indian (Southern) Ocean	2,310
Irtish	Altai Mts., U.S.S.R.	Ob River	2,300
Volga	Valdai plateau, U.S.S.R.	Caspian Sea	2,300
Madeira	Confluence of Gauporé and Maumoré Rivers, Bolivia-Brazil border	Amazon River	2,000
St. Lawrence	St. Louis River, Minn.	Gulf of St. Lawrence	1,900
Purús	Southwest Amazonas, Brazil	Amazon River	1,850
Rio Grande	San Juan Mts., Colorado	Gulf of Mexico	1,800
São Francisco	Southwest Minas Geraes, Brazil	Atlantic Ocean	1,800
Yukon	Junction of Lewes and Pelly, Yukon Territory	Bering Sea	1,800
Salween	Tibet, south of Kunlun Mountains	Gulf of Martaban	1,750
Danube	Black Forest, Germany	Black Sea	1,725
Euphrates	Dumlu Dag (moun- tains), Turkey	Persian Gulf	1,700
Indus	Himalayas	Arabian Sea	1,700
Orinoco	Sierra Parima on Vene- zuela-Brazil boundary	Atlantic Ocean	1,700
Tocantins	Near Pyrenopolis, southeast Brazil	Pará River (Atlantic Ocean)	1,700
Brahmaputra	Himalayas	Ganges River (Bay of Bengal)	1,680
Nelson	Head of Bow River, west Alberta, Canada	Hudson Bay	1,660
Si Kiang	Plateau of Yunnan, southwest China	China Sea	1,650
Zambezi	11°21'S.; 24°22'E., North- ern Rhodesia, Africa	Indian Ocean	1,600
Ganges	Himalayas	Bay of Bengal	1,540
Amu Darya (Oxus)	Nicholas Range, Pamir Mountains, U.S.S.R.	Lake Aral	1,500

River	Source	Outflow	Approx. length, miles
Paraguay	Mato Grosso, Brazil	Paraná River	1,500
Yapurá	Andes, Colombia	Amazon River	1,500
Arkansas	Central Colorado	Mississippi River	1,450
Colorado	Middle Park, northern Colorado	Gulf of California	1,440
Dnieper	Valdai Hills, U.S.S.R.	Black Sea	1,400
Negro	Watershed between Ori- noco and Amazon	Amazon River	1,400
Ural	Southern Ural Moun- tains, U.S.S.R.	Caspian Sea	1,400
Ohio-Allegheny	Plateau in Potter County, Pa.	Mississippi River	1,308
Orange	Basutoland, Africa	Atlantic Ocean	1,300
Irrawaddy	Confluence of N'mai and Mali Rivers, northeast Burma	Bay of Bengal	1,250
Columbia	Columbia Lake, British Columbia	Pacific Ocean	1,214
Saskatchewan	Western Alberta, Canada	Lake Winnipeg	1,205
Darling	Central part of Eastern Highlands, Australia	Murray River	1,160
Tigris	Taurus Mts., Turkey	Euphrates River (Persian Gulf)	1,150
Sungari	Sungari Reservoir, Manchuria, China	Amur River	1,130
Don	Lake Ivan, U.S.S.R.	Sea of Azov	1,100

## Large Lakes of the World

Name and location	Area, sq. mi.	Length, miles	Maximum depth, feet	Elevation above sea level, feet
Caspian, U.S.S.R.-Iran†	169,300	795	3,612	-86
Superior, U. S. A.-Canada	31,820	383	1,290	602
Aral, U.S.S.R.	26,233	280	222	155
Victoria, East Central Africa	26,200	250	270	3,720
Huron, U. S. A.-Canada	23,010	247	750	580
Michigan, U. S. A.	23,400	321	923	580
Baikal, U.S.S.R.	13,300	411	5,413	1,515
Tanganyika, East Central Africa	12,700	450	4,708	2,536
Great Bear, Canada	12,000	195	270*	391
Great Slave, Canada	11,170	325	—	495
Nyasa, Southern Africa	11,000	350	2,580	1,650
Erle, U. S. A.-Canada	9,940	241	210	572
Winnipeg, Canada	9,398	260	70	712
Ontario, U. S. A.-Canada	7,540	193	778	245
Balkhash, U.S.S.R.	7,115	430	36	900
Ladoga, U.S.S.R.	7,000	125	730	55
Onega, U.S.S.R.	3,764	145	408	125
Rudolf, Eastern Africa	3,475	185	—	1,250
Titicaca, Bolivia-Peru	3,200	125	892	12,507
Nicaragua, Nicaragua	3,089	110	200	135
Athabaska, Canada	3,058	195	—	699
Reindeer, Canada	2,444	155	—	1,150
Issyk-Kul, U.S.S.R.	2,230	115	2,300	5,400
Koko Nor, China	2,200	66	—	10,000
Vänern, Sweden	2,143	87	292	144
Winnipegosis, Canada	2,086	122	38	831
Bangweulu, East Central Africa	1,900	60	15	3,700
Nipigon, Canada	1,870	70	—	852
Manitoba, Canada	1,817	120	12*	813
Urmia, Iran	1,750*	80-90	50	4,184
Albert, Uganda, Africa	1,640	100	50	2,037
Dubawnt, Canada	1,600	65	—	500
Great Salt, U. S. A.	1,500	75	15-25*	4,200
Van, Turkey	1,453	80	—	5,643

\* Average. † The name Caspian Sea is a misnomer; it is a land-locked lake, so classified by oceanographers.

## Volcanoes of the Earth

There are approximately 430 volcanoes (275 in the Northern Hemisphere and 155 in the Southern) with recorded eruptions in historical times. Of the 2,500 recorded eruptions, more than 2,000 have taken place in the Pacific area. Of known active volcanoes, 80 are of the submarine type.

### ATLANTIC-INDIAN AREA

#### Mediterranean Region

*Italy:* Mt. Vesuvius, southeast of Naples (3,858 ft.). Only active volcano on mainland of Europe. Pompeii buried by an eruption, A.D. 79. Latest eruption in 1944.

*Sicily:* Mt. Etna, eastern Sicily (10,741 ft.). Two new craters formed in eruptions of Feb.-Mar., 1947. Worst eruption in 50 years occurred Nov., 1950-Jan., 1951.

*Lipari Islands* (north of Sicily): Stromboli (about 3,000 ft.). Called "Lighthouse of the Mediterranean." Erupted 1951.

#### Atlantic Area

*Canary Islands:* Pico de Teide (Teneriffe), on island of Teneriffe (12,192 ft.).

*Cape Verde Islands:* Fogo (over 8,000 ft.). Severe eruption in 1857; last until 1951.

*Iceland:* At least 25 volcanoes active in historic times. These volcanoes very similar to those in Hawaii.

Hekla (4,747 ft.). Several craters, largest about  $1\frac{1}{4}$  mi. in circumference. Most recent eruptions reported in 1947-48.

Skaptarjökull. Series of volcanoes near Skaptar; erupted in 1783 with large loss of life and produced largest known single output of lava.

Askja (4,600 ft.). Largest in Iceland.

*Jan Mayen Island:* Beerenberg, northern part of island (over 8,000 ft.). Extinct.

*British Cameroons:* Mt. Cameroon (13,353 ft.). Has several craters. Last erupted in 1922.

*Lesser Antilles (West Indian Islands):* Mt. Pelée, in northwestern Martinique (about 4,400 ft.). Eruption in 1902 destroyed town of St. Pierre and killed approximately 40,000.

#### Indian Ocean Region

*Comoro Islands* (east of northern Mozambique): One volcano, Kartala (over 8,500 ft.). Visible for over 100 miles. Last erupted in 1904.

*Réunion Island* (east of Madagascar): Piton de la Fournaise (Le Volcan) (8,610 ft.). Large lava flows.

*Tanganyika Territory:* Kilimanjaro (19,565 ft.). Extinct. Highest mountain in Africa.

### THE PACIFIC AREA

#### Northwest Portion

*Kamchatka:* 14-18 active volcanoes.

Shiveluch (over 10,500 ft.). Most northerly volcano of Kamchatka group.

Klyuchevskaya (Kluchev) (15,912 ft.). Reported active in 1946.

Koryatskaya (over 11,500 ft.). Violent eruption in 1895.

*Kurile Islands:* At least 13 active volcanoes and several submarine outbreaks.

*Japan:* at least 33 active vents.

Fujiyama (Fujisan), southwest of Tokyo (12,385 ft.). Symmetrical in outline, snow-covered. Regarded as a sacred mountain.

Adzumayama (7,733 ft.). Eruption in 1900 killed 82.

Asamayama (8,182 ft.). Continuously active; violent eruption in 1783; latest in 1950.

Asosan (5,223 ft.). Crater 10 by 15 miles is the largest known in the world; erupted most recently in 1953, killing several students.

Bandaisan, about 125 miles north of Tokyo (9,037 ft.). Violent eruption in 1883 devastated a 27-square-mile area.

*Ryukyu archipelago:* Nakano-shima (3,485 ft.); Suwanose-shima (2,697 ft.).

*Bonin (Ogasawara) Islands:* Mt. Suribachi, on Iwo Jima (546 ft.). A sulfurous steaming volcano. Raising of U. S. flag over Mt. Suribachi was one of the dramatic episodes of World War II.

*New Britain archipelago:* Numerous active vents, including Father, on New Britain (7,500 ft.).

*Santa Cruz Islands:* Tinakula (2,200 ft.).

*New Hebrides:* Lopevi (4,755 ft.).

*Samoa archipelago:* Savaii. An eruption in 1905 did considerable damage. Niuafoou (Tin Can) between Samoa and Fiji Islands has a crater 6,000 feet below and 600 feet above water. Active in 1946.

*Philippine Islands:* about 100 eruptive centers; Hibok Hibok on Camiguin island erupted in Sept. 1950, and again in Dec. 1951, when about 750 were reported killed or missing; eruptions continued in 1952-53.

Taal, on Volcano Island in Lake Bombo (about 1,000 ft.). Crater over 7,500 ft. in diameter.

Mayon, in southeastern Luzon (7,946 ft.). An almost perfect cone. Continuous mild activity. Destructive eruption in 1897.

*Moluccas:* A volcanic chain of islands which contains several active volcanoes.

#### Hawaiian Group:

Mauna Loa (13,680 ft.). Also called "Long Mountain." Discharges more lava than any other volcano. Largest volcanic mountain in the world in cubic content, with crater of 3.7 sq. mi. Violent eruption in June, 1950, with lava pouring 25 mi. into the ocean.

Mauna Kea (13,784 ft.). Highest mountain in group.

**Hualalal** (8,269 ft.). Has many small pit craters. Only lava flow in historic times was in 1801.

**Kilauea** (4,090 ft.). A vent in side of Mauna Loa but apparently erupts independently of it. One of the most spectacular and active craters. Crater has an area of 4.14 sq. mi. Erupted 1952.

#### Southwest Portion

**Sumatra:** Ninety volcanoes have been discovered; 12 are now active. The most famous, Krakatoa, is a small volcanic island in the Sunda Strait. Numerous volcanic discharges occurred in 1883. One explosion caused the disappearance of the highest peak and the northern part of the island. Fine dust was carried around the world in the upper atmosphere. Over 36,000 persons lost their lives in resultant tidal waves, which were felt as far away as Cape Horn. Active again in 1928 and 1950.

**Java:** Thirteen of 125 volcanic centers are active. Few serious eruptions. Galunggung is famous for two destructive eruptions in 1822. It is thought that over 100 villages and about 4,000 lives were lost.

**Lesser Sunda Islands:** Fifteen eruptive cones. Tamboro on Soembawa (Sumbawa) (about 9,000 ft.) was 13,000 ft. prior to a severe eruption in 1815, which ejected an estimated 36 cu. mi. of material.

**Melanesian area:** Volcanoes are located on New Guinea, New Hebrides, Santa Cruz, Solomons, and on numerous other small islands. Eruption of Mt. Lamington in Papua Territory, New Guinea, in Jan., 1951, killed more than 3,000.

**New Zealand:** Tarawera, on North Island. Severe eruption in 1886 destroyed the famous pink and white sinter terraces of Rotomahana, a hot lake.

**Ngauruhoe** (7,515 ft.). Emits steam and vapor incessantly. Major eruptions, 1952-53.

#### Northeast Portion

**Aleutian area:** There are 32 active vents known, and numerous inactive cones.

**Shisaldin**, on Unimak (8,683 ft.). Latest eruption Jan., 1947.

**Bogosloff**, on Bogosloff island (Castle) (about 1,000 ft.). Mountain first appeared after an eruption in 1796.

#### Alaska:

**Wrangell** (14,005 ft.).

**Katmai** (about 7,500 ft.). On June 6, 1912, a violent eruption occurred, during which the "Valley of Ten Thousand Smokes" was formed. Erupted 1951, 1953.

**United States:** Lassen Peak, in California (10,453 ft.). Only observed active volcano in the United States. Last period of activity in 1914-17. Other mountains of volcanic origin include Mt. Shasta, Mt. Hood, Mt. Rainier, and the mountain that contains Crater Lake.

#### Mexico:

**Popocatepetl** (17,883 ft.). Crater 673 ft.

deep and 2½ mi. in circumference. Not entirely extinct; steam still escapes.

**Colima** (14,239 ft.), in group that has had frequent eruptions.

**Orizaba** (Citlaltepetl) (18,696 ft.).

**Tuxtla** (4,900 ft.). Had a violent eruption in 1793 but is now quiescent.

**Paricutin.** First appeared in Feb., 1943. In less than a week a cone over 140 ft. high developed with a crater one quarter mile in circumference. Cone grew over 1,500 ft. in 1943. Erupted 1952.

**Boquerón** ("Big Mouth"). Newest volcano in Western Hemisphere, discovered Sept., 1952 on San Benedicto island, about 250 mi. south of Lower California. Reported to have grown 1,050 ft. in 6 weeks.

#### Guatemala:

**Santa María Quezaltenango** (12,361 ft.). Frequent activity between 1902-08 and 1922-28 after centuries of quiescence. Most dangerously active vent of Central America. Other volcanoes include Tajumulco (13,814 ft.) and Atitlán (11,633 ft.).

**El Salvador:** Izalco, "beacon of Central America," which first appeared in 1770 and is still growing (erupted in July, 1950); San Salvador, which had a violent eruption in 1923 and Conchagua, which erupted with considerable damage early in 1947.

**Nicaragua:** Volcanoes include Telica (latest eruption in 1950), Coseguina, and Momotombo (4,126 ft.). Between Momotombo on the western shore of Lake Managua and Coseguina overlooking the Gulf of Fonseca, there is a string of more than 20 cones, many still active. One of these, Cerro Negro, erupted in July, 1947, with considerable damage and loss of life, and again in 1948-50.

**Costa Rica:** Four volcanic cones whose bases merge are Poás (8,895 ft.), Barba (9,280 ft.), Irazú (10,525 ft.), and Turrialba (11,350 ft.).

#### Southeast Portion

**Colombia:** Huila (18,700 ft.), a vapor-emitting volcano, and Tolima (17,109 ft.).

Eruption of Puracé (15,420 ft.), 1949, killed 17.

**Ecuador:** Cotopaxi (19,344 ft.). Perhaps highest active volcano in the world. Possesses a beautifully formed cone.

**Cayambe** (19,170 ft.). Almost on equator. Other volcanoes include Tunguragua (16,689 ft.), Sangay (17,470 ft.), and Antisana (over 18,000 ft.).

**Peru and Bolivia:** Many active volcanoes. Misti, near Arequipa, Peru (19,167 ft.). Sajama, in Bolivia (21,391 ft.).

**Licancabur**, in Bolivia (about 19,500 ft.).

**Chile and Argentina:** About 25 active or potentially active; destructive eruption of Villarrica, Chile, 1948; active in 1949.

## Interesting Caves and Caverns of the World

**Aggtelek.** In village of same name, northern Hungary. Large stalactitic cavern about 5 miles long.

**Altamira Cave.** Near Santander, Spain. Contains animal paintings (Old Stone Age art) on roof and walls.

**Antiparos.** On island of same name in the Grecian Archipelago. Some stalactites are 20 ft. long. Brilliant colors and fantastic shapes.

**Blue Grotto.** On island of Capri, Italy. Cavern hollowed out in limestone by constant wave action. Now half filled with water because of sinking coast. Name derived from unusual blue light permeating the cave. Source of light is a submerged opening, light passing through the water.

**Carlsbad Caverns.** Southeast New Mexico. Largest underground labyrinth yet discovered. Three levels: 754; 900, and 1,320 feet below the surface.

**Fingal's Cave.** On island of Staffa off coast of western Scotland. Penetrates about 200 ft. inland. Contains basaltic columns almost 40 ft. high.

**Ice Cave.** Near Dobsina, Czechoslovakia. Noted for its beautiful crystal effects.

**Jenolan Caves.** In Blue Mountain plateau, New South Wales, Australia. Beautiful stalactitic formations.

**Kent's Cavern.** Near Torquay, England. Source of much information on Paleolithic man.

**Luray Cavern.** Near Luray, Virginia. Has large stalactitic and stalagmitic columns of many colors.

**Mammoth Cave.** Limestone cavern in central Kentucky. Cave area is about 10 miles in diameter but has at least 150 miles of irregular subterranean passages at various levels. Temperature remains fairly constant at 54°F.

**Peak Cavern or Devil's Hole.** Derbyshire, England. About 2,250 ft. into a mountain. Lowest part is about 600 ft. below the surface.

**Postumia (Adelsberg) Grotto.** Near Postumia in Julian Alps, about 25 miles N.E. of Trieste. Stalactitic cavern, largest in Europe. Piuca (Pivka) River flows through part of it. Caves have numerous beautiful stalactites.

**Singing Cave.** Iceland. A lava cave; name derived from echoes of people singing in it.

**Wind Cave.** In Black Hills of South Dakota. Limestone caverns with stalactites and stalagmites almost entirely missing. Variety of crystal formations called "boxwork."

**Wyandotte Cave.** In Crawford County, southern Indiana. A limestone cavern with five levels of passages; one of the largest in North America. "Monumental Mountain," approximately 135 ft. high; is believed to be one of the world's largest underground "mountains."

## Geysers

Geysers exist in many volcanic regions of the world such as Japan and South America, but their greatest development is in Iceland, New Zealand and Yellowstone National Park, Wyoming, U. S. A.

**Iceland.** The principal geyser area is about 30 miles northwest of Mt. Hekla, where there are more than 100 geysers and hot springs in about two square miles. The main ones are the following:

**Great Geyser (Geysir).** Sends up a column 160 to 180 ft. high intermittently from an opening more than 9 ft. across and about 70 ft. deep.

**Strokkur (Churn).** Constant bubbling and occasional eruptions.

**New Zealand.** There is a great profusion of boiling springs, steam jets and mud volcanoes northeast of Lake Taupo on North Island. Main geysers are *Waikite*, with a 30-35 ft. column, *Pohutu* and *Waimauku*.

**United States**

**Yellowstone National Park, Wyoming.** There are 120 named geysers in Yellowstone and perhaps half that number un-

named. Most of the geysers and the 4,000 or more hot springs are located in the western portion of the park. The most important are the following:

**Norris Geyser Basin** has 24 or more active geysers; the number varies. There are scores of steam vents and hot springs. *Valentine* is highest, erupting 50-75 ft. at intervals varying from 18 hr. to 3 days or more. *Minuté*, 15-20 ft. high, several hours apart. Others include *Steamboat*, *Fearless*, *Veteran*, *Vixen*, *Corporal*, *Whirligig*, *Little Whirligig* and *Pinwheel*.

**Lower Geyser Basin** has at least 18 active geysers. *Fountain* throws water 50-75 ft. in all directions at unpredictable intervals. *Clepsydra* erupts violently from four vents up to 30 ft. **Great Fountain** plays every 8 to 15 hr. in spurts from 30 to 90 ft. high.

**Midway Geyser Basin** has vast steaming terraces of red, orange, pink and other colors; there are pools and springs, including the beautiful *Grand Prismatic Spring*. *Excelsior* crater discharges boiling water into Firehole River at the rate of 6 cu. ft. per second.

*Upper Geyser Basin* includes *Artemisia*, which sends up a column 15-35 ft. every 24 to 30 hr. *Riverside* has an unusual cone; it throws water 75 ft. obliquely over the river for half an hour. Interval ranges from 6 to 8½ hr.

*Rocket* is irregular and unpredictable, as is its neighbor *Grotto*.

*Giant* erupts up to 200 ft. at intervals of 2½ days to 3 mo.; eruptions last about 1½ hr. *Daisy* sends water up to 75 ft. but is irregular and frequently inactive.

*Old Faithful* sends up a column varying from 116 to 175 ft. at intervals of about 65 min., varying from 33 to 90 min. Eruptions last about 4 min., during which time about 12,000 gal. are discharged.

*Giantess* seldom erupts, but during its active periods sends up streams 150-200 ft.

*Lion Group: Lion* plays up to 60 ft.

every 2-4 days when active; *Little Cub* up to 10 ft. every 1-2 hr. *Big Cub* and *Lioness* seldom erupt.

*Castle* usually erupts twice daily to a height of 75 ft., but at times splashes water for prolonged periods to heights of about 20 ft.

*Mammoth Hot Springs*. There are no geysers in this area. The formation is travertine. Sides of a hill are steps and terraces over which flow the steaming waters of hot springs laden with minerals. Each step is tinted by algae to many shades of orange, pink, yellow, brown, green and blue. Terraces are white where no water flows.

Other groups of geysers, hot pools and mud pots are located on the west shore of Shoshone Lake, on West Thumb Bay, at Mud Volcano, in the Grand Canyon of the Yellowstone, and on Mirror Plateau.

## World Extremes of Climate

### Highest recorded shade temperature:

World: 136° F. at Azizia, Libya, North Africa, September 13, 1922.

United States: 134° F. at Death Valley, California, July 10, 1913.

### Lowest recorded temperature:

World: -90° F. at Verkhoyansk, Siberia, U.S.S.R., February 5 and 7, 1892; a temperature of -94° F. was reported in Siberia during the winter of 1946-47 but was not verified by the Soviet government.

United States: -66° F. at Yellowstone Park, Montana, February 9, 1933.

### Highest mean annual temperature:

World: 86° F. at Massawa, Eritrea, Africa.

United States: 77.3° F. at Tavernier, Fla.

### Maximum rainfall for 24-hour period:

World: 46 inches at Bagulo, Luzon, Phillipines, July 14-15, 1911.

United States: 26.12 inches at Hoegees Camp (Camp Le Roy), California, January 22-23, 1943.

### Maximum recorded rainfall in one month:

366 inches at Cherrapunji, India, July, 1861 (over 150 inches fell in 5 consecutive days in August, 1841). Average annual rainfall at Cherrapunji is 424 inches. The 28-year average annual rainfall at Mt. Waialeale, Island of Kauai, Hawaiian Islands, however, is 489 inches.

### Minimum recorded rainfall:

World: .04 inch at Iquique, Chile, average yearly fall during 40 years.

United States: 1.73 inches at Greenland Ranch, California, average yearly fall during 38 years. During one period of 401 consecutive days, this station recorded no rain.

### Average annual precipitation for the United States is about 29 inches.

Louisiana is the wettest state, with an annual average (62 years) of 55.68 inches.

Nevada is the driest state, with an annual average (64 years) of 8.60 inches. Highest local average annual rainfall in the United States was 150.73 inches at Wynoochee Oxbow, Washington, based on a 13-year record. Greatest 6-hour fall was at Lake Charles, La., 15.38 inches, on June 19, 1947. Greatest 24-hour U. S. rain (unofficially observed) was 38.2 inches, Thrall, Tex., Sept. 9-10, 1921. Heavy snowfall records include 60 inches in one day at Giant Forest, California; 87 inches in 27½ hours and 95 inches in 32½ hours at Silver Lake, Colorado; and 42 inches in 2 days at Angola, New York. In the New York City blizzard of Dec. 26, 1947, 25.8 inches of snow fell in about 20 hours, almost 5 inches more than fell in the blizzard of March, 1888. Greatest seasonal snowfall was 894 inches, over 73 feet, at Tamarack, California, during 1906-07. Large hailstones include one 17 inches in circumference and weighing 1½ pounds which fell at Potter, Nebraska, July 6, 1928.

## Ancient Empires

The *Egyptian* and *Babylonian* empires, Near Eastern civilizations whose cultures mark the beginning of written history, had their origins in the nebulous period of ancient history prior to the year 4000 B.C. They developed rapidly in the fertile river valleys of the Nile in Egypt and the Tigris-Euphrates in Mesopotamia after the discovery of metals and the invention of writing. Their governments were all-powerful, with the people subjugated and without political rights. The Egyptians regarded their king as a god. In Babylon, the ruler was a priest-king, earthly representative of the gods. Nevertheless, these Near East cultures made great contributions to the eternal march of man; they advanced the ways of making and doing things, produced the earliest literature, developed the principles of law (the code of Hammurabi, Babylonian king of the 18th [or possibly 17th] century B.C., the oldest code of law) and science, learned the basic principles of art, and evolved early religious worship.

The influence of Babylon and Egypt was felt in the rise of the Semitic tribes of Syria, the Hittites in Asia Minor, and the people of the Aegean region. Between the years 1200 and 800 B.C., the small Syrian states grew to great power and then were overwhelmed by the great empire of the *Assyrians*, the warlike peasants of the Tigris valley, who took the lessons learned from the Babylonians and spread that culture over their domains. The Assyrians, like the Egyptians and the Babylonians, in turn fell under the power of the *Persian* kings in the century between 600 and 500 B.C. By 525 B.C., the Persian Empire extended from India to Egypt, the greatest the world had ever seen.

The lessons learned by these early Near Eastern civilizations were transmitted to *Greece*, which developed its illustrious empire in the Aegean region, after the inhabitants of the island of Crete had absorbed the Egyptian culture. The mainland Greeks overthrew the Cretans and in turn were succeeded by the Doric Greeks, who spread their culture across the Aegean, the Asia Minor coast, and into the Mediterranean and Black Sea regions. The char-

acteristic Greek political institution was the city-state, first ruled by kings and often temporary monarchical tyrannies, and finally by the participation of free citizens. Literature and the arts flourished, and by the 5th century B.C., when Athens became the great city of the Greeks, drama had risen to full maturity with the great tragedies of Sophocles and Euripides and the comedies of Aristophanes. Architecture and art advanced apace. The Greeks, learning much from their Egyptian teachers, produced such superb buildings as the Parthenon and created amazingly beautiful statues through the use of living models. Religion, which was closely linked with art, also flourished, as did the development of philosophy, under the great Socrates (470?-399 B.C.), Plato (427?-347 B.C.), and Aristotle (384-322 B.C.). Wars weakened the city-states, and they fell to Alexander the Great in the 4th century B.C.

Last among the great ancient empires was the *Roman*, which developed in Italy and gained control over the Mediterranean region after absorbing the culture of Greece and combining with it new principles of law and art and teaching this new learning to the West. The development of the Roman civilization began in 510 or 509 B.C., when the peoples on the peninsula of Italy freed themselves from the rule of the Etruscans. The Romans, with a republican form of government, speedily conquered Italy and the Mediterranean region, and the Roman governors became men of great wealth, corrupting the city-state system and making it a graft-ridden machine of exploitation. The failure of the government to check this self-seeking influence brought on a revolt which resulted eventually in the rise of Julius Caesar to dictatorship in 46-44 B.C. Caesar's murder in the Senate at Rome was followed in 27 B.C. by the establishment of the one-man rule of Augustus over the Roman Empire. Legal practices were developed and became the foundations of modern law. Great roads, bridges and buildings were constructed. This great ancient civilization began to crumble in the 3d century A.D.

## Languages of the World

(spoken natively by 5,000,000 or more people)

Language	Number speaking	Language	Number speaking
American Indian: including Mayan, Quéchuá and 750-1,000 other languages and dialects	15,000,000	Bisayan, Ilocano, Javanese, Madurese, Malay, Malagasy, Sundanese, Tagalog	105,000,000
Amharic (Ethiopia)	5,600,000	Iranian: including Baluchi, Kurdish, Persian, Pushtu	26,500,000
Annamese (Indo-China)	20,000,000	Italian	50,000,000
Arabic	65,000,000	Japanese	90,000,000
Bantu: including Swahili, Zulu (S. Africa)	45,000,000	Javanese	41,000,000
Bengali (India; Pakistan)	70,000,000	Kanarese (India)	16,000,000
Berber dialects (N. Africa)	6,000,000	Korean	30,000,000
Bihari (India)	35,000,000	Lahnda (India; Pakistan)	13,000,000
Bisayan (Philippines)	9,000,000	Madurese (Indonesia)	6,500,000
Bulgarian	7,000,000	Malay (Indonesia)	14,000,000
Burmese	13,000,000	Malayalam (India)	12,000,000
Catalan (Spain)	6,000,000	Marathi (India)	25,000,000
Chinese: including Mandarin, Cantonese and others	450,000,000	Munda (India)	5,000,000
Cushitic: including Somali (Ethiopia)	7,000,000	Oriya (India)	13,000,000
Czech	8,500,000	Persian	12,000,000
Dravidian: including Kanarese, Malayalam, Tamil, Telugu (India)	95,000,000	Polish	30,000,000
Dutch	11,000,000	Portuguese	63,000,000
English	260,000,000	Punjabi (India; Pakistan)	22,000,000
Ethiopian: including Amharic	6,400,000	Pushtu (Afghanistan; Pakistan)	8,000,000
Finnno-Ugric: including Estonian, Finnish, Hungarian, Karelian, Lappish	21,500,000	Rajasthani (India; Pakistan)	17,000,000
Flemish (Belgium)	5,000,000	Rumanian	16,000,000
French	65,000,000	Russian	200,000,000
German	100,000,000	Serbo-Croatian (Yugoslavia)	15,000,000
Greek	8,000,000	Siamese	16,000,000
Gujarati (India; Pakistan)	20,000,000	Sinhalese (Ceylon)	5,500,000
Hausa (Central Africa)	9,000,000	Spanish	140,000,000
Hindi (India; Pakistan)	180,000,000	Sudanic: including Hausa (Central Africa)	75,000,000
Hungarian	13,000,000	Sundanese (Indonesia)	13,000,000
Indic: including Assamese, Bengali, Bihari, Gujarati, Hindi, Lahnda, Marathi, Oriya, Punjabi, Rajasthani, Sindhi, Sinhalese	415,000,000	Swahili (E. Africa)	8,000,000
Indonesian: including Balinese,		Swedish	7,000,000
		Tagalog (Philippines)	5,000,000
		Tamil (India)	27,000,000
		Telugu (India)	33,000,000
		Tibeto-Burman: including Tibetan and Burmese	20,000,000
		Turkic: including Kazakh, Tatar, Turkish, Uzbek	45,000,000
		Turkish	20,000,000
		Uzbek (U.S.S.R.)	6,000,000
		Yiddish	5,000,000

## Universities—Ancient and Modern

Universities, in the modern sense of the term, sprang up in the 12th and 13th centuries in response to the resurgence of learning that preceded the Renaissance in Europe. Procedure at the early universities was informal, with students gathering at some place in a city to listen to a pre-eminent teacher. There were no campuses, buildings or endowments. Actually, the term "university" once meant a guild or corporation; there were, in the medieval period, "universities" of bootmakers, weavers, etc. Thus the university of learning was similar in organization to the guilds. The students filled the role of apprentices and the teachers were the masters.

The first European university was that of *Salerno* in the 9th century, when it was known as a school of medicine. By the 11th century, it had become one of the most famous medical schools of Europe.

*University of Bologna.* Originated 1158 by students as a means of protection against the merchants and citizens of Bologna who had raised prices of food and lodging. It was famous for its legal scholars. The students were organized into two guilds and exercised a great deal of authority over the administration.

Other Italian universities famed in the Middle Ages included those at *Arezzo*, *Fer-*

rara, Florence, Modena, Naples, Padua, Parma, Perugia, Siena and Vicenza.

*University of Paris.* Originated between 1150 and 1170 in a cathedral school on the Ile de la Cité, it was later moved to the left (south) bank of the Seine, although it remained under the authority of the chancellor of Notre Dame. It developed into the most famous continental center of learning of its day. Its four principal schools were theology, medicine, law and arts. By the 14th century, the university had some 40 colleges, of which the Sorbonne became the most celebrated.

The universities of Paris and Bologna had a marked influence in the subsequent creation of other university centers. About 1200, there was a migration of students from Paris to Oxford (founded in the 12th century) and a decade or two later, from Oxford to Cambridge (also founded in the 12th century).

Other famous universities of the Middle Ages include the *University of Toulouse* (1233), *Salamanca* (1243), *Seville* (1254), *Orléans* (1305), *Valladolid* (1346), *Prague* (1347), *Kraków* (1364), *Vienna* (1384), *Erfurt* (1379), *Heidelberg* (1385), *Cologne* (1388), *Leipzig* (1409), *Rostock* (1419) and *Louvain* (1426).

### The Renaissance

The Renaissance gave fresh impetus to the universities of Europe. In France three of importance arose in the 15th century—the *University of Aix* (1409, Provence), the *University of Poitiers* (1431) and the *University of Caen* (1437).

Other French institutions of note that arose in this era were at *Bordeaux* (1441), *Valence* (1452), *Nantes* (1463) and *Bourges* (1465). New European universities were also founded at *Trier* (1450), *Freiburg* (1455), *Ingolstadt* (1459), *Basel* (1460), *Budapest* (1475), *Mainz* (1476), *Uppsala* (1477), *Tübingen* (1477), *Copenhagen* (1479), *Wittenberg* (1502), *Frankfurt on Oder* (1506) and *Coimbra* (1537).

*St. Andrews*, founded in 1411, was the first university in Scotland. Others were the *University of Glasgow* (1453) and the *University of Aberdeen* (1494). The *College of Edinburgh* was established in the post-Reformation period (1582). In Ireland, *Trinity College* was founded in Dublin in 1591.

### Reformation and Post-Reformation

Until the Reformation, most of the institutions of higher learning in Europe were under the tutelage of the Catholic Church. After 1520, however, many established universities declared their independence of the Church. Cromwell's rule brought about new scholastic methods at both Oxford and Cambridge and the establishment of new colleges thoroughly imbued with Protestantism.

But the first Protestant university was that of Marburg, Germany, founded in 1527. Other Protestant universities were: *Königsberg* (1544); *Jena* (1558); *Helmstedt* (1575); *Altdorf* (1575); *Giessen* (1607); *Strasbourg* (1621) and *Halle* (1693).

### 18th, 19th and 20th Centuries

Among the more famous institutions in this era was Göttingen (1736), whose school of history became celebrated throughout Europe. Others were: *Erlangen* (1743); *Berlin* (1809); *Lemberg* (Lwów) (1816); *Bonn* (1818); *Helsingfors* (1826); the *National University at Athens* (1837); *Bucharest* (1864); *Tokyo* (1868); *Sofia* (1883); *Kyoto* (1897), and *Constantinople* (Istanbul) (1900).

Among the more famous British universities established in the 19th and 20th centuries were the *University of London* (1828); *Manchester* (1851); the *Mason University College* in Birmingham, later *Birmingham University* (1900); *Liverpool* (1903); *Leeds* (1904); and the *University of Sheffield* (1905). The *University of Wales* (1893) is composed of the colleges of Aberystwyth, Bangor and Cardiff.

There are many large and important universities in the British Commonwealth. In Canada, the famous *McGill University* in Montreal was founded in 1821. Others are the *University of Toronto* (1827); *Queens University* at Kingston, Ont. (1841); *Laval University*, Quebec (1852); *Dalhousie*, Halifax (1818), and *Montreal University* (1876).

The early universities in India were patterned after London University rather than on the Oxford-Cambridge style, and were purely examining institutions. *Calcutta*, *Bombay* and *Madras* universities were founded in 1857 as examining bodies.

In Australia, the state plays an important role in the development of universities. The *University of Melbourne* (1853) has the largest enrollment. Among the others are *Adelaide* (1874); *Tasmania* (1890); *Queensland* (1910); *Sydney* (1850), and *West Australia* (1911).

There are also many well-endowed universities in New Zealand, South Africa, and other parts of the Commonwealth.

By 1800, Russia had only three universities—*Vilna* (1578), *Dorpat* (1832) and *Moscow* (1755). Other institutions developed later were the *University of Kharkov* (1804); *Kazan* (1804); *St. Petersburg* (1819); *St. Vladimir* in Kiev (1832); *Odessa* (1865); *Warsaw*, which is now Polish (1886) and *Tomsk*, in Siberia (1888). The building of universities after the Revolution of 1917 was spurred by the Soviet government.

In China, the growth of universities was hampered by the chaotic state of the government in the 1900's, the recurring civil wars and the conflict with Japan.

## The United States

Universities in the United States marched in step with the progress of the nation. The early settlers brought a heritage of European culture which they planted in New England soil. The first university in the country was started as *Harvard College* in 1636, with an endowment totaling 800 pounds. Harvard was to become probably the most famous of the American universities.

The *College of William and Mary* (1693) was the second institution of higher learning established in the colonies. Others started during the colonial period (current names only) are: *Yale* (1701); *University of Pennsylvania* (1740); *Princeton* (1746); *Washington and Lee* (1749); *Columbia* (1754); *Brown* (1764); *Rutgers* (1766) and *Dartmouth* (1770).

After the Revolution of 1776, the state tax-supported university was established. The *University of Virginia* (1819) was a notable early example of this type.

Colleges for women grew up in the second quarter of the 19th century. Among these are: *Mt. Holyoke* (1837); *Elmira* (1855); *Vassar* (1861); *Wells* (1868); *Hunter* (1870); *Wellesley* (1870); *Smith* (1871) and *Bryn Mawr* (1880).

In the latter part of the 19th century, universities established by private endowments arose. Typical of these are: *Cornell* (1865), which is also a land-grant institution; *Johns Hopkins* (1876); *Stanford* (1885) and the *University of Chicago* (1890).

## Libraries of the World

### Europe and Asia

Among the great libraries of the world, the *British Museum* remains in the first rank with more than 5,000,000 printed volumes and manuscripts. It contains such outstanding treasures as the *Codex Alexandrinus* and the *Codex Sinaiticus* of the Bible, the best collection of Greek papyrus from Egypt, and vast collections of original historical manuscripts of incalculable value. Some 150,000 volumes were destroyed in air raids during World War II, but many were replaced later.

One of the finest libraries in the world is the *Bibliothèque Nationale* in Paris, which has approximately 6,000,000 volumes, 150,000 manuscripts, 450,000 medals and coins, and 5,000,000 prints and engravings.

The *State Library* in Berlin, founded in 1659-61, was combined in 1947 with the library of the University of Berlin to form a new institution known as the *Öffentliche Wissenschaftliche Bibliothek*. Prior to World War II, the *State Library* had 2,850,000 volumes; the new combined library had only 1,500,000. The *State Library* at Munich also suffered extensive war losses, with some 500,000 volumes destroyed; it now contains about 2,000,000. The *Deutsche Bücherei* at Leipzig had recovered most of its losses by 1950 and has more than 2,000,000 volumes. Estimates have placed the war losses of all German libraries at between 20 and 25 million volumes.

The *Nationalbibliothek* in Vienna has about 1,400,000 volumes and a large collection of papyrus.

While not as large as some of the European state libraries, the *Biblioteca Apostolica Vaticana* in Rome has many priceless

old manuscripts bequeathed to the Vatican over the centuries. The printed books number about 700,000, the incunabula about 7,000 and the manuscripts about 50,000, including the *Codex Vaticanus*.

Three of the more important Italian libraries are the *Biblioteca Nazionale* in Naples, with about 1,400,000 volumes and 11,000 manuscripts; the *Biblioteca Nazionale Centrale* in Florence, with 3,400,000 volumes, manuscripts and pamphlets, and the *Biblioteca Nazionale Centrale* in Rome, with approximately 1,940,000 volumes.

Other large European libraries are the *Bibliothèque Royale* in Brussels (2,000,000 volumes), the *Biblioteca Nacional* in Madrid (1,500,000), the *University Library* at Amsterdam (more than 1,500,000) and the *Royal Library* in Stockholm (700,000). The *Lenin State Library* in Moscow is said to contain 14,500,000 volumes (a figure that undoubtedly includes duplications), besides many collections of valuable historical documents. In Leningrad, the *Public Library* claims 6,000,000 volumes, and the *Libraries of the Academy of Sciences* some 4,000,000. There are said to be 300,000 libraries in all parts of the U.S.S.R.

In the Far East, the most extensive libraries are found in Japan, although war damage in 1944-45 was severe. In Tokyo, the *National Diet Library* (formerly the *Imperial Library*) was organized in 1948 as a deposit center. With its various branches, it contains an estimated 3,000,000 volumes. The *University Library* at Kyoto has about 1,700,000.

### The United States and Canada

The earliest libraries in the Colonial era were privately owned, although in 1731 Benjamin Franklin projected the first subscription library in Philadelphia. Endow-

ments helped to set up many of the large libraries, although many of these institutions are now receiving state or municipal support.

The largest library in the United States is the *Library of Congress*, established in 1800 by Congress. In 1953, it contained 9,850,000 books and pamphlets. It extends services to members of Congress and other government departments, and also offers excellent facilities for persons engaged in scholarly research.

The *New York Public Library*, with more than 5,500,000 volumes, is the largest public library in the U. S.

The *American Library Directory* for 1951 listed 11,034 libraries in the U. S., including 6,416 public (with 2,364 branches), 1,425 college and university, 1,339 special and 1,794 other types.

The growth of libraries attached to colleges and universities in the United States

has been phenomenal, and some of the university libraries are among the largest in the country. Those with more than 1,000,000 volumes each in 1952 were as follows: Harvard, 5,500,000; Yale, 4,065,000; University of California, including branches, 2,900,000; University of Illinois, 2,480,000; Columbia, 2,010,000; University of Chicago, 1,860,000; Stanford, 1,750,000; University of Minnesota, 1,600,000; Cornell, 1,510,000; Princeton, 1,500,000; University of Michigan, 1,470,000; University of Pennsylvania, 1,240,000; Northwestern, 1,030,000; and Duke, 1,040,000.

In Canada, the most important public library is that of Toronto, which has more than 500,000 volumes. Other large Canadian university libraries are at Queens (225,000), McGill (625,000) and Laval (375,000). The *American Library Directory* for 1951 listed a total of 806 libraries in Canada, including 478 public.

## Museums of the World

(For U. S. Museums see INDEX.)

The modern museum originated during the Renaissance, when the revival of interest in the arts and classical antiquity led princes, nobles and humanists to amass specimens of historical value and to house their collections in special buildings or galleries.

### Art Museums

The *British Museum*, London, contains some of the most famous historical objects of the world, including the Elgin Marbles and the Rosetta Stone.

*Victoria and Albert Museum*, London, whose primary object is to furnish examples to illustrate the history of art, emphasizes architecture and sculpture, ceramics, engraving, book production, paintings, textiles, etc. The library is devoted principally to fine and applied arts of all countries.

*National Gallery*, London, contains a great number of old Masters, including paintings by Da Vinci, Michelangelo, Titoretto, Mantegna, Titian, Bellini, Jan van Eyck, Rubens, Rembrandt, Holbein, Constable and Turner.

*Tate Gallery*, London, established as part of the National Gallery, was badly damaged during air raids of World War II, but was completely restored by 1949.

*Wallace Collection*, London, has many *objets d'art* and curies of French origin, and first-rank canvases and etchings of Italian, Spanish, Flemish, Dutch and English artists.

In France, the most famous gallery is the *Louvre* in Paris, noted for the magnificence of its architecture as well as for its art collection, which is the largest in

the world. Other Parisian museums of importance are *Cluny*, *Rodin*, *Guimet*, and *Carnavalet*.

Among the magnificent Italian museums, the *National Museum* at Naples contains one of the best arranged and classified collections. The *Uffizi Gallery* in Florence, founded by the Medicis, has one of the world's largest and best collections of Italian art. Other galleries in Florence are the *Gallery of Modern Art* (*Pitti Palace*) and the *National Museum* (*Bargello*). Rome has numerous museums, including several in the Vatican.

In Berlin, the *Schloss Museum* and *National Gallery* were damaged during World War II.

The *Royal Museum of Fine Arts* in Brussels has a fine collection of French, Flemish and Dutch masters and houses many canvases by Rubens, Van Dyck, Jordaens, Rembrandt, Frans Hals and Jan Steen.

The *State Museum* in Amsterdam contains superb works by Rembrandt, Vermeer and others.

Among the notable art museums in other countries are the world-famous *Museo del Prado* in Madrid; the *Tretyakov Gallery* and the *Pushkin State Museum of Fine Arts* in Moscow; the *Hermitage State Museum* in Leningrad; and the *National Museum* in Tokyo, famed for its many Oriental paintings and examples of Oriental workmanship in lacquer, jade, ivory and metal.

### Science Museums

The *Ashmolean Museum*, oldest in Great Britain, was founded in 1683 by the Univer-

sity of Oxford and houses a collection of archeological and classical rarities.

*Science Museum* of London has exhibits of scientific instruments and appliances which review the progress of science and the history of invention. Other London museums of science are the *Natural History (British Museum)*, the *Imperial War Museum* (exhibits of both World Wars) and the *Geological Museum*.

The *Liverpool Museums* contain valuable collections of natural history and antiquities and are divided into departments of zoology, botany, geology, archeology and ethnology. The buildings were almost completely destroyed during World War II, although most of the exhibits were saved.

The *Manchester Museum* serves as both a municipal and a university museum. The *Bristol Museum* contains departments of geology, zoology, botany, archeology and Bristol antiquities. The *National Museum of Wales* at Cardiff has departments of archeology, botany, geology and zoology.

In Edinburgh, Scotland, are the famed *Royal Scottish Museum*, which has collections in art, ethnography, natural history, technology and archeology; and the *National Museum of Antiquities of Scotland*, noted for its coin and manuscript collections.

The *National Museum* in Dublin and the *Municipal Museum* in Belfast have important science collections.

Notable institutions of continental Europe include the *Natural History Museum* in Paris, the *Museum of Oceanography* in Monaco, the *Natural History Museum* in Lisbon, the *State Museum of Geology and Mineralogy* in Leyden (Netherlands), the *Museum of Natural History* in Stockholm, the *Natural History Museum* in

Vienna, the *Hungarian National Museum* in Budapest, the *National Museum* in Prague, and the various natural science museums in Basel, Berne, Geneva, Lausanne and Neuchâtel, Switzerland. Most larger cities of the U.S.S.R. have science museums of varying sizes, some specializing in local exhibits of natural history.

Famous science museums in Germany prior to World War II included the various sections of the *Staatlichen Museen* in Berlin (re-established after the war) and the museums of natural history and ethnography in Hamburg.

In Calcutta is the *Indian Museum*, outstanding for its marine fauna and vertebrate fossils, and in Bombay the *Victoria and Albert Museum*.

In Australia are the *Queensland Museum* and the *Botanic Museum* in Brisbane, the *South Australian Museum* in Adelaide, and the *Australian Museum* in Sydney.

New Zealand contains the *Canterbury Museum*, Christchurch, rich in local fauna, flora and geological items, and a Maori and Polynesian ethnological collection.

In Africa, the *South Africa Museum*, Capetown, holds general and local history collections and others illustrating anthropology, ethnology and archeology. The *Durban Museum* contains much anthropological material. In Cairo are the notable collections of the *Egyptian Museum*.

Other museums of note include the *Archeological Museums* at Istanbul, the *Tokyo Science Museum*, the *National Museum of Natural History* in Santiago (Chile), the *National Museum* at Rio de Janeiro, and the *Argentine National Museum of Natural Sciences* at Buenos Aires.

## Zoological Gardens

North America has more than 30 major zoos, in the United States, Canada and Mexico. The *Quebec Zoological Society's* collection is made up of Canadian species; Toronto has many exotic species.

The first zoological garden in the United States was established in Philadelphia in 1874. Since that time nearly every large city in the country has acquired a zoo. Among the largest are the celebrated *Bronx Zoo* and the *Central Park Zoo* in New York, the *Lincoln Park Zoo* and the *Brookfield Zoo* in Chicago, and those in St. Louis, Cincinnati, Detroit, Kansas City and San Diego. The *National Zoological Park* in Washington, D. C., in a beautiful setting of hills, woods and streams, was established in 1890 by an act of Congress. Some of the U. S. zoos exhibit their collections in open-air, barless pits; the Brookfield Zoo is an example.

In Europe, zoological gardens have long been popular public institutions. The *Jardin d'Acclimatation*, in the Bois de Boulogne, Paris, was established in 1858, and a model zoo at Vincennes was added in 1937 for the Paris Exposition.

Germany had about 20 zoological gardens, many of which were developed in the peacetime years between World Wars I and II. Large zoos were located in Berlin and Frankfurt on Main. In Munich, the animals were grouped according to the continent of their origin. Others were established at Dresden, Leipzig and Cologne. At Stellingen, the *Hagenbeck Garden* became an outstanding show place and distributing center for animals. Smaller collections were established at Düsseldorf, Elberfeld and Hanover. Several German zoos, notably that at Berlin, were destroyed during World War II.

The *Schönbrunn* at Vienna is one of the oldest zoos in Europe. The Budapest zoological gardens house a fine collection of European birds. At Antwerp, the *Royal Zoological Society* founded a large menagerie in 1843. It was seriously damaged by German bombs during World War II.

In the British Isles, the outstanding collection is in the garden of the *London Zoological Society* in Regent's Park. Although this zoo received a number of direct bomb hits in 1940–41 and again in 1944, it remained open throughout World War II; visitors during this period numbered 6,500,000. Manchester and Clifton have smaller gardens, and the one at Edinburgh is famous for its collection of pen-

guins. The *Dublin Zoo* is noted for its lions, many of which were born there.

The Amsterdam zoo, with its East Indian collection and its aquarium, and the Rotterdam gardens are the two best known in the Netherlands. Built on a high elevation, the *Skansen Zoo* in Stockholm exhibits north European specimens. The most important gardens in the U.S.S.R. are found in Moscow, where northern as well as exotic species are collected. The zoo at Rome has part of its collection confined in barless pits. At Lisbon there is a small zoological garden, and in Madrid a part of the original royal menagerie. A new zoo notable for its landscaping was opened at Naples, Italy, in 1952.

## Famous Structures

(See also Seven Wonders of the World.)

### Ancient

The *Great Sphinx of Egypt*, one of the wonders of ancient Egyptian architecture, adjoins the pyramids of Giza and has a length of 189 ft. It was built in the 4th dynasty and was used as a temple.

Other Egyptian buildings of note include the *Temples of Karnak and Edfu* and the *Tombs at Beni Hassan*.

The *Parthenon of Greece*, built on the Acropolis in Athens, was the chief temple to the goddess Athena. It was believed to have been completed by 438 B.C. The present temple remained intact until the 5th century A.D. Today, though the Parthenon is in ruins, its majestic proportions are still discernible.

Other great structures of ancient Greece were the *Temples at Paestum* (about 540 and 420 B.C.); the *Temple of Poseidon* (about 460 B.C.); the *Temple of Apollo at Corinth* (about 540 B.C.); the *Temple of Apollo at Bassae* (about 450–420 B.C.); the famous *Erechtheum* atop the Acropolis (about 421–405 B.C.); the *Temple of Athena Nike* at Athens (about 426 B.C.); the *Olympieum* at Athens (174 B.C.–A.D. 131); the *Athenian Treasury* at Delphi (about 515 B.C.); the *Propylaea* of the Acropolis at Athens (437–432 B.C.); the *Theater of Dionysus* at Athens (about 350–325 B.C.); the "*House of Cleopatra*" at Delos (138 B.C.) and the *Theater* at Epidauros (about 325 B.C.).

The *Colosseum (Flavian Amphitheater)* of Rome, the largest and most famous of the Roman amphitheaters, was opened for use A.D. 80. Elliptical in shape, it consisted of three stories and an upper gallery, rebuilt in stone in its present form in the third century A.D. Its seats rise in tiers, which in turn are buttressed by concrete vaults and stone piers. It could seat between 40,000 and 50,000 spectators. The

Colosseum was principally used for gladiatorial combat.

The *Pantheon* at Rome, begun by Agrippa in 27 B.C. as a temple, was rebuilt in its present circular form by Hadrian (A.D. 110–25). Literally the Pantheon was intended as a temple of "all the gods." It is remarkable for its perfect preservation today, and it has served continuously for 20 centuries as a place of worship.

Famous Roman arches include the *Arch of Constantine* (about A.D. 315) and the *Arch of Titus* (about A.D. 80).

### Later European

*St. Mark's Cathedral* in Venice (1063–67), one of the great examples of Byzantine architecture, was begun in the 9th century. Partly destroyed by fire in 976, it was later rebuilt as a Byzantine edifice.

Other famous Byzantine examples of architecture are *St. Sophia* in Constantinople (A.D. 532–37); *San Vitale* in Ravenna (542); *St. Paul's Outside the Walls*, Rome (5th century); the *Kremlin* baptism and marriage church, Moscow (begun in 1397); and *St. Lorenzo Outside the Walls*, Rome, begun in 588.

The *Cathedral Group* at Pisa (1067–1173), one of the most celebrated groups of structures built in Romanesque style, consists of the cathedral, the cathedral's baptistery, and the *Leaning Tower*. This trio forms a group by itself in the north-west corner of the city. The cathedral and baptistery are built in black and white marble. The campanile (Leaning Tower) is 179 ft. high and leans more than 16 feet out of the perpendicular. There is little reason to believe that the architects intended to have the tower lean.

Other examples of Romanesque architecture include the *Vézelay Abbey* in France (1130); the *Church of Notre-Dame-*

*du-Port* at Clermont-Ferrand in France (1100); the *Church of San Zeno* (begun in 1138) at Verona, and *Durham Cathedral* in England.

The *Alhambra* (1248-1354), located in Granada, Spain, is universally esteemed as one of the great masterpieces of Mohammedan architecture. Designed as a palace and fortress for the Moorish monarchs of Granada, it is surrounded by a heavily fortified wall more than a mile in perimeter. The location of the Alhambra in the Sierra Nevada provides a magnificent setting for this jewel of Moorish Spain.

The *Tower of London* is a group of buildings and towers covering 13 acres along the north bank of the Thames. The central *White Tower*, begun in 1078 during the reign of William the Conqueror, was originally a fortress and royal residence, but was later used as a prison. The *Bloody Tower* is associated with Anne Boleyn and other notables.

*Westminster Abbey*, in London, was begun in 1045 and completed in 1065. It was rebuilt and enlarged in 1245-50.

*Notre-Dame de Paris* (begun in 1163), one of the great examples of Gothic architecture, is a twin-towered church with a steeple over the crossing and immense flying buttresses supporting the masonry at the rear of the church.

Other famous Gothic structures are *Chartres Cathedral* (12th century); *Sainte Chapelle*, Paris (1246-48); *Laon Cathedral*, France (1160-1205); *Rheims Cathedral* (about 1210-50; rebuilt after its almost complete destruction in World War I); *Rouen Cathedral* (13th-16th centuries); *Amiens Cathedral* (1218-69); *Beauvais Cathedral* (begun 1247); *Salisbury Cathedral* (1220-60); *York Minster* or the *Cathedral of St. Peter* (begun in the 7th century); *Milan Cathedral* (begun 1386); and *Cologne Cathedral* (13th-19th centuries; badly damaged in World War II).

The *Duomo* (cathedral) in Florence was founded in 1298, completed by Brunelleschi and consecrated in 1436. The oval-shaped dome dominates the entire structure.

The *Vatican* is a group of buildings in Rome comprising the official residence of the Pope. The *Basilica of St. Peter*, the largest church in the Christian world, was begun in 1450. The *Sistine Chapel*, begun in 1473, is noted for the art masterpieces of Michelangelo, Botticelli and others. The *Basilica of the Savior* (known as *St. John Lateran*) is the first-ranking Catholic Church in the world, for it is the cathedral of the Pope.

Other examples of Renaissance architecture are the *Palazzo Vecchio*, the *Palazzo Pitti* and the *Palazzo Strozzi* in Florence; the *Farnese Palace* in Rome; *Palazzo Grimani* (completed about 1550) in Venice;

the *Escorial* (1563-93) near Madrid; the *Town Hall* of Seville (1527-32); the *Louvre*, Paris; the *Château* at Blois, France; *St. Paul's Cathedral*, London (1675-1710; badly damaged in World War II); the *Ecole Militaire*, Paris (1752); the *Pazzi Chapel*, Florence, designed by Brunelleschi (1429); the *Palace of Fontainebleau* and the *Château de Chambord* in France.

The *Palace of Versailles*, containing the famous Hall of Mirrors, was built during the reign of Louis XIV and served as the royal palace until 1793.

Outstanding European buildings of the 18th and 19th centuries are the *Superga* at Turin, the *Hôtel-Dieu* in Lyon, the *Belvedere Palace* at Vienna, the *Royal Palace* of Stockholm, the *Opera House* of Paris (1863-75); the *Bank of England*, the *British Museum*, the *University of London* and the *Houses of Parliament*, all in London; the *Panthéon*, the *Church of the Madeleine*, the *Bourse* and the *Palais de Justice* in Paris.

The *Eiffel Tower*, in Paris, was built for the Exposition of 1889 by Alexandre Eiffel. It is 984 ft. high.

#### Asiatic and African

The *Taj Mahal* (1632-50), at Agra, India, built by Shah Jahan as a tomb for his wife, is considered by some as the most perfect example of the Mogul style and by others as the most beautiful building in the world. Four slim white minarets flank the building, which is topped by a white dome; the entire structure is of marble.

Other examples of Indian architecture are the temples at Benares and Tanjore.

Famed Mohammedan edifices are the *Dome of the Rock* or *Mosque of Omar*, Jerusalem (A.D. 691); the *Citadel* (1166), and the *Tombs of the Mamelukes* (15th century), in Cairo; the *Tomb of Humayun* in Delhi; the *Blue Mosque* (1468) at Tabriz; and the *Tamerlane Mausoleum* at Samarkand.

*Angkor Vat*, outside the city of Angkor Thom, Cambodia, is one of the most beautiful examples of Cambodian or Khmer architecture. The sanctuary was built during the 12th century.

*Great Wall of China* (228 B.C.?), designed specifically as a defense against nomadic tribes, has numerous large watch towers which could be called buildings. It was erected by Emperor Ch'in Shih Huang T'i and is 1,400 miles long. Built mainly of earth and stone, it varies in height between 18 and 30 feet.

Typical of Chinese architecture are the pagodas or temple towers. Among some of the better known pagodas are the *Great Pagoda of the Wild Geese* at Sian (founded in 652); *Nan t'a* (11th century) at Fan Shan; the *Pagoda of Sung Yueh Ssu* (A.D. 623) at Sung Shan, Honan.

Other well-known Chinese buildings are the *Drum Tower* (1273), the *Three Great Halls* in the *Purple Forbidden City* (1627), the *Buddha's Perfume Tower* (19th century), the *Porcelain Pagoda* and the *Summer Palace*, all at Peiping.

#### United States

*Rockefeller Center*, from 5th to 6th Aves. and from 48th to 51st Sts. in New York City, occupies 12½ acres and contains 15 buildings, the highest being the 70-story *RCA Building*.

*Grant's Tomb*, at Riverside Dr. near 122nd St. in New York City, contains the bodies of Ulysses S. Grant and his wife. It was completed in 1897.

*The Cathedral of St. John the Divine*, at Cathedral Pkwy. and Amsterdam Ave. in New York City, was begun in 1892 but

is not yet completed. When completed, it will be the largest Gothic cathedral in the world: 601 ft. long, 146 ft. wide at the nave, 320 ft. wide at the transept.

*St. Patrick's Cathedral*, at 5th Ave. and 50th St. in New York City, has a seating capacity of 4,500. The nave was opened in 1877; the cathedral was dedicated in 1879.

*Lincoln Memorial*, in Washington, D. C., was dedicated in 1922. It has 36 columns (the number of states in 1865), each 44 ft. high. The main chamber contains a statue of Lincoln.

*Independence Hall*, in Philadelphia, was the scene of the signing of the Declaration of Independence and the drawing up of the U. S. Constitution. It was built between 1732-41 as the State House. The Liberty Bell is on the first floor.

## Great Dams of the World

Reservoir capacity, thousands of acre feet	Name	Location	Maximum height, feet	Date completed
31,142	Hoover	Colorado River, Ariz.-Nev.	726	1936

## Great Disasters

## Earthquakes and Volcanic Eruptions

- A.D. 79** Aug. 24, ITALY: eruption of Mt. Vesuvius buried cities of Pompeii and Herculaneum, killing thousands.
- 1755** Nov. 1, PORTUGAL: one of the most severe of recorded earthquakes leveled Lisbon and was felt as far away as southern France and North Africa; between 10,000 and 20,000 killed in Lisbon alone.
- 1883** Aug. 26-28, NETHERLANDS INDIES: eruption of Krakatoa; violent explosions destroyed two-thirds of island. Sea waves occurred as far away as Cape Horn, and possibly England. Estimated 36,000 dead.
- 1902** May 8, MARTINIQUE, WEST INDIES: Mt. Pelée erupted and wiped out city of St. Pierre; 40,000 dead.
- 1906** April 18, SAN FRANCISCO: earthquake accompanied by fire razed more than 4 sq. mi.; more than 500 dead or missing; property damage about 250-300 millions.
- 1908** Dec. 28, MESSINA, SICILY: about 85,000 killed and city totally destroyed by one of most disastrous of recorded earthquakes.
- 1923** Sept. 1, JAPAN: earthquake destroyed third of Tokyo and most of Yokohama; more than 90,000 killed.
- 1935** May 31, INDIA: earthquake at Quetta killed an estimated 50,000.
- 1939** Jan. 24, CHILE: earthquake razed some 50,000 sq. mi.; 30,000 killed.
- 1939** Dec. 27, NORTHERN TURKEY: severe quakes destroyed city of Erzincan; about 100,000 casualties.
- 1949** Aug. 5, ECUADOR: earthquake killed about 6,000 and razed 50 towns.
- 1950** Aug. 15, INDIA: second heaviest earthquake on record affected 30,000 sq. mi. in Assam; 574 killed.
- 1951** Jan. 18-21, PAPUA TERRITORY, NEW GUINEA: eruption of Mt. Lamington killed more than 3,000.
- 1953** Feb. 12, IRAN: earthquake in Turun and nearby towns killed 556.
- 1953** March 18, TURKEY: northwestern part of country hit by quake; more than 500 died.
- 1953** Aug. 9-12, GREEK IONIAN ISLANDS: series of earthquakes killed at least 600, caused much damage.

## Floods, Avalanches and Tidal Waves

## WORLD

- 1228** HOLLAND: 100,000 reputedly drowned by sea flood in Friesland section.
- 1642** CHINA: rebels besieging Kaifeng destroyed seawall, causing flood that drowned 300,000 inhabitants.
- 1887** CHINA: hundreds of thousands of lives reputedly lost in Honan province in overflow of Hwang Ho River.
- 1896** JAPAN: earthquake and tidal wave at Sanriku killed 27,000.
- 1939** CHINA: floods in north; casualties estimated at 10,000,000 homeless, starved or drowned.
- 1946** ALASKA-HAWAII: series of tidal waves in Pacific originating off Alaska killed about 150 in Hawaii.
- 1947** JAPAN: floods in wake of typhoon killed about 2,000 on Honshu Island.
- 1948** TURKEY: hundreds of persons were drowned when two rivers in southern Turkey burst their dikes.
- 1948** CHINA: about 1,000 reported dead in floods near Foochow.
- 1950** CHINA: floods in eastern and southern China left 1,000,000 homeless and killed 500.
- 1951** ALPS: snow avalanches killed more than 200 in Alpine regions of Switzerland, Italy, France and Austria.
- 1951** MANCHURIA: floods killed 1,800; 3,000 missing.
- 1951** ITALY: Po river floods killed about 150 and left 150,000 homeless.
- 1953** NORTHWEST EUROPE: storm followed by floods devastated North Sea coastal areas of Britain, Netherlands, Belgium, France, Germany. Netherlands was hardest hit, with 1,794 dead and many missing.
- 1953** JAPAN: separate floods on Kyushu and Honshu islands reported to have killed about 1,300.
- 1953** IRAN: flash floods reported to have killed more than 700.

## UNITED STATES

- 1889** PENNSYLVANIA: more than 2,000 died in Johnstown flood.
- 1913** OHIO AND INDIANA: floods of Ohio and Indiana rivers took 730 lives.
- 1927** MISSISSIPPI VALLEY: floods inundated 20,000 sq. mi.; 700,000 homeless.
- 1937** MISSISSIPPI AND TRIBUTARY VALLEYS: floods in the Allegheny, Mississippi, Ohio valleys killed hundreds.
- 1951** KANSAS, MISSOURI, OKLAHOMA: floods centering in Kansas City area killed more than 40 and caused damage estimated to exceed \$750,000,000.

## Tornadoes, Typhoons and Hurricanes

## WORLD

- 1864 Oct. 5, INDIA: most of Calcutta denuded by cyclone; 70,000 killed.
- 1876 Oct. 31, INDIA: cyclone and tidal wave swept 3,000 sq. mi. with Bengal worst hit; 215,000 killed.
- 1882 June 6, INDIA: cyclone and tidal wave killed 100,000 in Bombay.
- 1906 CHINA: typhoon at Hong Kong killed about 10,000.
- 1930 Sept. 3, SANTO DOMINGO (now Ciudad Trujillo): hurricane killed about 2,000 and injured 6,000.
- 1934 Sept. 21, JAPAN: hurricane killed more than 4,000 on Honshu.
- 1935 Oct. 25, HAITI: hurricane, flood killed 2,000 in Jérémie and Jacmel.
- 1942 Oct. 16, INDIA: cyclone devastated Bengal; about 40,000 lives lost.
- 1949 Oct. 27, INDIA: cyclone along southeastern coast killed about 1,000.
- 1949 Oct. 31-Nov. 2, PHILIPPINES: 1,000 believed dead following typhoon.
- 1952 Oct. 20-22, INDO-CHINA, PHILIPPINES: typhoons killed more than 1,000.

## UNITED STATES

- 1884 Feb. 18, SOUTHERN STATES: tornadoes took about 700 lives.

- 1900 Sept. 8, TEXAS: Galveston hurricane and tidal wave; 5,000 dead.
- 1925 March 18, MIDWEST: about 800 killed and 13,000 injured in tornado which hit Ill., Ind., Tenn., Ky., and Mo.
- 1926 Sept. 18, FLORIDA: east coast hurricane killed 373; 40,000 homeless.
- 1928 Sept. 12, FLORIDA: hurricane from Windward Islands killed 4,000.
- 1936 April 2, MISSISSIPPI AND GEORGIA: Tupelo, Miss., and Gainesville, Ga., centers of tornadoes which swept the South; 402 killed and 1,853 injured.
- 1938 Sept. 21, NEW ENGLAND: hurricane killed at least 488 in severest recorded storm of northeastern states.
- 1952 March 21-22, SOUTHWEST: Tornadoes and floods killed almost 250.
- 1953 May 11, TEXAS: tornado killed 114 persons and injured more than 500 in Waco.
- 1953 June 8, MICHIGAN AND OHIO: series of tornadoes killed 113 in Flint, Mich., and 19 in vicinity of Bowling Green, Ohio.
- 1953 June 9, MASSACHUSETTS: tornado struck Worcester and vicinity, killing 85.

## Fires and Explosions

## WORLD

- 1666 Sept. 2, ENGLAND: "Great Fire of London" destroyed 13,200 houses, St. Paul's Church, 86 parish churches, etc. Damage 10 million pounds.
- 1812 Sept. 14, RUSSIA: fire started by Russians in Moscow after French occupation destroyed 30,800 houses.
- 1881 Dec. 8, AUSTRIA: about 850 died in Ring Theater fire in Vienna.
- 1917 Dec. 6, CANADA: explosion and fire at Halifax when ammunition ship collided with a vessel; 1,500 dead.
- 1922 ASIA MINOR: more than three-fifths of Smyrna destroyed by fire following Turkish occupation.
- 1947 Aug. 15, ENGLAND: blast in under-seas coal mine near Whitehaven, Cumberland, killed 104 miners.
- 1948 July 28, GERMANY: explosion in I. G. Farben Ludwigshaven works killed hundreds, injured 6,000.
- 1949 Sept. 2, CHINA: Fire on Chunking waterfront killed 1,700 and gutted 10,000 buildings.
- 1950 Sept. 26, ENGLAND: fire in colliery at Creswell killed 80 coal miners.
- 1951 May 29, ENGLAND: 81 killed in coal-mine explosion at Easington.

- 1953 Jan. 1, CHILE: 57 died in warehouse blast at Valparaíso.
- 1953 June 14, BRAZIL: about 70 died in dance hall fire at São Paulo.

## UNITED STATES

- 1835 Dec. 16, NEW YORK CITY: 530 buildings destroyed by fire.
- 1871 Oct. 8, CHICAGO: the "Chicago Fire," which started in barn, swept 2,124 acres, burned 17,450 buildings, killed 250 persons, and made 98,500 homeless; 196 million damage.
- 1872 Nov. 9, BOSTON: fire destroyed 800 buildings; 75 million damage.
- 1904 Feb. 7, BALTIMORE, Md.: Fire destroyed most of business section; 125 million damage.
- 1937 March 18, NEW LONDON, TEXAS: explosion destroyed schoolhouse; 413 children and 14 teachers killed.
- 1942 Nov. 28, BOSTON: Coconut Grove night club fire killed about 500.
- 1944 July 17, PORT CHICAGO, CALIF.: more than 300 killed in explosion of two ammunition ships.
- 1946 Dec. 7, ATLANTA: Fire in Wincoff Hotel killed 119.

- 1947 March 25, CENTRALIA, ILL.: explosion in coal mine killed 111 miners.
- 1947 April 16-18, TEXAS CITY, TEXAS: most of city destroyed, more than 500 persons dead following explosion on ship.

- 1949 April 5, EFFINGHAM, ILL.: hospital fire killed 66, including 13 babies.
- 1951 Dec. 21, near WEST FRANKFORT, ILL.: 119 coal miners died in explosion.
- 1953 April 16, CHICAGO, ILL.: fire in factory killed 35.

### Shipwrecks (not including military or naval action)

#### WORLD

- 1833 May 11, LADY OF THE LAKE: bound from England to Quebec, struck iceberg; 215 perished.
- 1853 Sept. 29, ANNIE JANE: emigrant vessel off coast of Scotland; 348 died.
- 1912 March 5, PRINCIPE DE ASTURIAS: Spanish steamer struck rock off Sebastian Pt.; 500 drowned.
- 1912 April 15, TITANIC: sank after colliding with iceberg; 1,513 died.
- 1914 May 29, EMPRESS OF IRELAND: sank after collision in St. Lawrence River; 1,024 perished.
- 1928 Nov. 12, VESTRIS: British steamer sank in gale off Virginia; 110 died.
- 1931 June 14, French excursion steamer overturned in gale off St. Nazaire; approximately 450 died.
- 1939 June 1, Submarine THETIS: sank in Liverpool Bay, Eng.; 99 perished.
- 1942 Oct. 2, QUEEN MARY: rammed and sank a British cruiser; 338 aboard the cruiser died.
- 1948 Dec. 3, KIANGYA: Chinese refugee ship wrecked in explosion; about 1,000 believed dead.
- 1949 Jan. 27, TAIPING: Chinese liner collided with collier and both sank; at least 600 died.
- 1949 Sept. 17, NORONIC: Canadian Great Lakes cruise ship burned at Toronto dock; about 130 died.
- 1950 Jan. 12, TRUCULENT: British submarine sank in Thames estuary after collision with tanker; 64 dead.
- 1951 April 16, AFFRAY: British submarine sank in English channel; 75 dead.
- 1952 Sept. 24, LA SIBYLLE: French submarine sank off Toulon; 48 lost.

- 1953 Jan. 9, CHANG TYONG-HO: South Korean ferry foundered off Pusan; 249 reported dead.
- 1953 Jan. 31, PRINCESS VICTORIA: British ferry sank in Irish Sea; 133 lost.
- 1953 April 4, DUMLUPINAR: Turkish submarine sank in Dardanelles after collision with Swedish freighter; 81 lost.
- 1953 Aug. 1, MONIQUE: French motor ship with 120 aboard disappeared in South Pacific.

#### U. S. AND U. S. LINES

- 1865 April 27, SULTANA: boiler explosion on Mississippi River steamboat near Memphis; 1,450 killed.
- 1904 June 15, GENERAL SLOCUM: excursion steamer burned in New York Harbor; 1,021 perished.
- 1915 July 24, EASTLAND: Great Lakes excursion steamer overturned in Chicago River; 812 died.
- 1934 Sept. 8, MORRO CASTLE: about 130 killed in fire off Asbury Park, N. J.
- 1939 May 23, Submarine SQUALUS: sank with 59 men off Hampton Beach, N. H.; 33 of the crew were rescued.
- 1945 April 9, U. S. ship, loaded with aerial bombs, exploded at Bari, Italy; at least 360 killed.
- 1952 Jan. 9, PENNSYLVANIA: freighter abandoned in Pacific; 45 lost.
- 1952 Jan. 10, FLYING ENTERPRISE: freighter sank about 35 miles off southwest England after valiant 12-day effort by captain, Henrik K. Carlsen, to save ship.
- 1952 April 26, HOBSON: minesweeper collided with aircraft carrier Wasp and sank during night maneuvers in mid-Atlantic; 176 lost.

### Aircraft Accidents

#### WORLD

- 1921 Aug. 24, ENGLAND: ZR-2, British dirigible, broke in two on trial trip near Hull; 62 died.
- 1930 Oct. 5, FRANCE: British dirigible, R-101, crashed at Beauvais; 47 died.
- 1935 May 18, U.S.S.R.: stunt flier crashed into giant land plane, the *Maksim Gorky*; 49 killed.

- 1938 July 24, COLOMBIA: military plane crashed into grandstand during air review at Bogotá, killing 53.
- 1947 Feb. 15, COLOMBIA: Avianca airliner crashed near Bogotá; 53 killed.
- 1948 Aug. 1, ATLANTIC OCEAN: French flying boat with 52 persons aboard disappeared.

- 1949 July 12, near BOMBAY, INDIA: crash of Dutch airliner killed 13 U. S. journalists and 32 others.
- 1950 March 12, near CARDIFF, WALES: crash of chartered airliner killed 80.
- 1950 Nov. 13, near GRENOBLE, FRANCE: Canadian plane carrying Holy Year pilgrims crashed; 58 dead.
- 1952 March 22, near FRANKFURT, GERMANY: crash of Dutch airliner killed 45 of 47 aboard.
- 1952 March 26, Moscow, U.S.S.R.: unconfirmed report said about 70 were killed in collision of Russian airliner and military plane.
- 1952 Sept. 6, FARNBOROUGH, ENGLAND: jet fighter exploded at air show, killing 27 spectators and 2 in plane.
- 1953 May 2, near CALCUTTA, INDIA: British jet airliner crashed, killing 43.
- U. S. AND U. S. LINES**
- 1925 Sept. 3, CALDWELL, OHIO: U. S. dirigible *Shenandoah* broke apart, killing 14.
- 1933 April 4, NEW JERSEY COAST: U. S. dirigible *Akron* crashed into sea; 73 died.
- 1937 May 6, LAKEHURST, N. J.: German zeppelin *Hindenburg* destroyed by fire at tower mooring; 36 died.
- 1946 Oct. 3, NEWFOUNDLAND: U. S. transatlantic airliner crashed near Stephenville; all 39 aboard killed.
- 1947 May 29, NEW YORK CITY: airliner crashed attempting takeoff; 43 died.
- 1947 May 30, BAINBRIDGE, MD.: all 49 passengers and four crew members killed in crash of airliner.
- 1947 June 13, near LEESBURG, VA.: Fifty killed in crash of airliner.
- 1947 Oct. 24, BRYCE CANYON, UTAH: airliner crashed into hillside after catching fire in midair; 52 killed.
- 1948 June 17, near MOUNT CARMEL, PA.: all 43 persons aboard airliner were killed as it crashed and burned.
- 1948 Aug. 29, near WINONA, MINN.: all 36 aboard airliner killed when it crashed into bluff.
- 1949 June 7, near SAN JUAN, PUERTO RICO: crash of converted army transport into ocean killed 53; 28 rescued.
- 1949 July 12, near LOS ANGELES, CALIF.: nonscheduled airliner hit mountain, killing 35 and injuring 14.
- 1949 Nov. 1, WASH., D. C.: fighter plane rammed airliner, killing 55.
- 1950 Jan. 27, YUKON, CANADA: U. S. Air Force plane disappeared with 44 aboard.
- 1950 June 24, near ST. JOSEPH, MICH.: airliner disappeared over Lake Michigan, presumably after exploding; 58 dead.
- 1950 Aug. 31, near CAIRO, EGYPT: crash of U. S. airliner killed 55, including 23 Americans.
- 1951 March 23, ATLANTIC OCEAN: U. S. Air Force transport with 53 aboard disappeared.
- 1951 April 25, near KEY WEST, FLA.: Cuban airliner and U. S. Navy plane collided; 43 killed.
- 1951 June 22, near SANOYE, LIBERIA: 40 aboard U. S. airliner died in crash.
- 1951 June 30, ROCKY MOUNTAIN NATIONAL PARK, COLO.: airliner crash killed 50.
- 1951 Aug. 24, near DECOTO, CALIF.: transcontinental airliner crash killed 50.
- 1951 Dec. 16, ELIZABETH, N. J.: nonscheduled airliner crash killed 56.
- 1952 Jan. 19, near SANDSPIT AIRPORT, B. C., CANADA: U. S. airlift plane with Korean veterans aboard fell into Pacific; 36 died, 7 survived.
- 1952 Jan. 22, ELIZABETH, N. J.: 29 killed, including former Sec. of War Robert P. Patterson, when airliner hit apartments; 7 of victims were on ground.
- 1952 Feb. 11, ELIZABETH, N. J.: third major air disaster in Elizabeth within 2 months fatally injured 33.
- 1952 April 11, near SAN JUAN, PUERTO RICO: airliner crashed into sea; 52 killed, 17 rescued.
- 1952 April 29, NORTH CENTRAL BRAZIL: airliner bound for New York crashed in jungle; 50 died.
- 1952 Nov. 14, near SEOUL, KOREA: crash of "Flying Boxcar" killed 44, including servicemen.
- 1952 Nov. 23, near ANCHORAGE, ALASKA: Air Force transport crashed, killing 52.
- 1952 Dec. 20, MOSES LAKE, WASHINGTON: crash of Air Force "Globemaster" killed 87 servicemen, injured 28.
- 1953 Jan. 7, near FISH HAVEN, IDAHO: Army transport plane crash killed 40.
- 1953 Feb. 14, GULF OF MEXICO: airliner crash off Mobile, Ala., during storm killed 46.
- 1953 June 18, near TOKYO, JAPAN: crash of U. S. Air Force "Globemaster" killed 129 servicemen in world's worst air disaster to date.
- 1953 July 11, PACIFIC OCEAN: airliner crashed into ocean about 325 mi. east of Wake Island; 58 died.
- 1953 July 18, near MILTON, FLA.: U. S. Marine plane crash killed 44.

## Railroad Accidents

## WORLD

- 1857 March 17, DES JARDINES CANAL, CANADA: train derailed on bridge; about 60 killed.
- 1864 June 29, near BELOEIL, CANADA: about 90 killed when train ran through open switch.
- 1879 Dec. 28, DUNDEE, SCOTLAND: train blown off Tay bridge; 73 drowned.
- 1881 June 24, near CUARTLA, MEXICO: about 200 died when train fell into river.
- 1882 July 13, near TCHERNY, RUSSIA: more than 150 killed in derailment.
- 1889 June 12, near ARMAGH, IRELAND: about 80 killed in collision.
- 1891 June 14, near BASEL, SWITZERLAND: about 100 killed in collision.
- 1915 May 22, GRETNA, SCOTLAND: two passenger trains and troop train collided; 227 killed.
- 1938 Dec. 25, near KISHINEV, RUMANIA: about 100 killed in collision.
- 1939 Dec. 22, near MAGDEBURG, GERMANY: more than 125 killed in collision; 99 killed in another wreck near Friedrichshafen.
- 1940 Jan. 29, OSAKA, JAPAN: 200 killed in collision.
- 1944 March 2, near SALERNO, ITALY: 521 suffocated when Italian train stalled in tunnel.
- 1949 Oct. 22, near NOWY DWOR, POLAND: more than 200 reported killed in derailment of Danzig-Warsaw express.
- 1950 April 6, near RIO DE JANEIRO, BRAZIL: train wrecked when bridge collapsed; 108 killed or missing.
- 1951 April 24, YOKOHAMA, JAPAN: fire aboard express train killed 104.
- 1952 March 4, near RIO DE JANEIRO, BRAZIL: about 120 reported killed in collision of 2 trains.

- 1952 Oct. 8, HARROW-WEALDSTONE, ENGLAND: two express trains crashed into commuter train; 112 dead.

## UNITED STATES

- 1856 July 17, near PHILADELPHIA, PA.: train carrying Sunday-school children wrecked; 66 killed.
- 1876 Dec. 29, ASHTABULA, O.: 80 killed when train broke through bridge.
- 1887 Aug. 10, near CHATSWORTH, ILL.: about 80 killed in wreck.
- 1904 Aug. 7, near EDEN, COLO.: about 100 killed in wreck.
- 1910 March 1, WELLINGTON, WASH.: more than 90 killed.
- 1938 June 19, MILES CITY, MONT.: train ran through bridge; 47 killed.
- 1943 Sept. 6, PHILADELPHIA, PA.: train derailed; 79 killed.
- 1943 Dec. 16, near RENNERT, N. C.: 72 killed in derailment and collision.
- 1944 Dec. 31, near OGDEN, UTAH: 48 killed in collision.
- 1946 April 25, NAPERVILLE, ILL.: at least 47 killed in collision.
- 1950 Feb. 17, ROCKVILLE CENTRE, N. Y.: head-on crash of two commuter trains killed 30.
- 1950 Sept. 11, near WEST LAFAYETTE, O.: streamliner rammed rear of troop train. 33 National Guardsmen dead.
- 1950 Nov. 22, RICHMOND HILL, N. Y.: 79 died when one commuter train crashed into rear of another.
- 1951 Feb. 6, WOODERIDGE, N. J.: 85 died when commuter train plunged through temporary overpass.
- 1953 Jan. 15, WASHINGTON, D. C.: runaway train crashed into Union station; extensive damage.
- 1953 March 27, near CONNEAUT, OHIO: 21 killed in 3-train wreck.

# HISTORICAL AND NEWS EVENTS

FROM ANCIENT TO MODERN TIMES

*Compiled by*

ENCYCLOPAEDIA BRITANNICA

(See also our section entitled *Headline History of Our Times*)

- Actium, Battle of (31 B.C.).** Octavius defeats Mark Anthony.
- Alexander the Great conquers Greece, Persia, Egypt and part of India (334-330 B.C.).** Major battles: Granicus (334 B.C.), Issus (333), Arbela (331).
- American Revolution (1775-83).** Outstanding events: 1775—Battle of Lexington-Concord (Apr. 19). Battle of Bunker Hill (June 17). 1776—Battle of Long Island (Aug. 27). 1777—Burgoyne surrenders at Saratoga (Oct. 17). 1781—Battle of Cowpens (Jan. 17). Battle of Yorktown (Sept. 28-Oct. 19), and British surrender by Cornwallis. 1783—Treaty signed by U. S. and Britain (Sept. 3).
- "Babylonian Captivity" of Papacy** with seat at Avignon (1309-77).
- Bacon's Rebellion (May 10-Oct. 18, 1676).** Nathaniel Bacon leads unsuccessful insurrection in Virginia because of abuses in government administration and taxation.
- Balfour Declaration (Nov. 2, 1917)** promises Jewish homeland in Palestine.
- Balkan Wars (1912-13).** Bulgaria, Serbia, Greece and Montenegro defeat Turkey; later, Bulgaria attacks Serbia and Greece and is defeated.
- Bastille destroyed (July 14, 1789).**
- Benedictine Order** founded at Monte Cassino (c. A.D. 529).
- Bible translated by Wycliffe into English (1382-84); Douay Version published (1582 & 1609-10); King James Version published (1611).**
- Black Death (beginning c. 1347)** wipes out at least  $\frac{1}{4}$  of the population of Europe.
- Black Friday (Sept. 24, 1869).** Financial panic results from gold corner in U. S.
- Boer War (1899-1902).** Boers defeated by British; sign peace treaty at Pretoria (May 31, 1902).
- Boston Massacre (Mar. 5, 1770).** British soldiers fire on Boston mob, killing 3.
- Boston Tea Party (Dec. 16, 1773).** Colonials dump tea in Boston Harbor because of tea tax.
- Boxer Rebellion (1900).** Uprising by secret society in northern China against foreigners.
- Brown, John, and 18 followers raid Harpers Ferry (Oct. 16, 1859)** and seize arsenal; taken prisoners by U. S. Marines (Oct. 18); Brown hanged (Dec. 2).
- Burr-Hamilton duel.** See Hamilton.
- Cape-to-Cairo Railroad completed (1918).**
- Carthage** founded by Phoenicians (c. 900 B.C.); destroyed by Romans (146 B.C.).
- Châlons, Battle of (A.D. 451).** Attila the Hun defeated by Romans.
- Charlemagne crowned Emperor of the West (A.D. 800).**
- Charles I beheaded (Jan. 30, 1649).** See also Great Rebellion.
- Children's Crusade (1212).** About 50,000 unarmed children set out to recover Holy Sepulchre; all lost or die on the way.
- Chinese-Japanese War (1894-95).** Japan wins Formosa, Pescadores and part of southern Manchuria; Korea becomes independent (annexed by Japan 1910).
- Christianity** made official religion of Roman Empire (A.D. 330).
- Civil War, American (1861-65).** Outstanding events: 1861—First Battle of Bull Run (July 21). 1862—*Monitor* defeats *Merrimac* (Mar. 9). Battle of Antietam (Sept. 15-17). 1863—Lincoln's Emancipation Proclamation (Jan. 1). Battle of Gettysburg (July 1-3). Grant captures Vicksburg (July 4). Battle of Lookout Mountain (Nov. 23-25). 1864—Battle of the Wilderness (May 5-6). Sherman's March through Georgia (Nov. 14-Dec. 22). 1865—Lee surrenders at Appomattox (Apr. 9).
- Code Napoléon, unified codification of French law, adopted (1804).**
- Code of Hammurabi (c. 2300 B.C.).** Oldest existing written code of laws.
- Communist Manifesto** issued by Karl Marx and Friedrich Engels (1848).
- Compromise of 1850** admits California as free state; organizes Utah and New Mexico as territories without mention

- of slavery; prohibits slave trade in D. C.; returns fugitive slaves to masters; pays Texas \$10 million for her claim to New Mexico.
- Confederacy** proclaimed by seceding states (Feb. 9, 1861); Jefferson Davis named President.
- Congress of Vienna** (1814-15). European powers, under leadership of Metternich, meet to settle problems of territory and government resulting from Napoleonic Wars.
- Constantinople** founded (as Byzantium) by Greeks (c. 660 B.C.); made capital of Eastern Roman Empire by Constantine the Great (A.D. 330); captured by Turks (1453); renamed Istanbul (1930).
- Council of Nicaea** (A.D. 325). Called by Constantine the Great; establishes official creed of Christianity (Nicene Creed).
- Council of Trent** (1545-64). Called by Pope Paul III, at suggestion of Emperor Charles V, to establish Catholic Counter Reformation.
- "Coxey's Army"** (March. 25-May 1, 1894). Jacob S. Coxey leads 20,000 unemployed on Washington, D. C.
- Crimean War** (1853-56). Russia loses claim to Greek Christians under Turkish flag.
- Crucifixion of Christ** (c. A.D. 29). According to New Testament, Christ rose from dead 2 days later.
- Crusades** (1096-1291). European Christians, in 7 periods of conflict, attempt to recover Holy Land from Moslems. *See also* Children's Crusade.
- Custer massacre** (June 25, 1876). Gen. George A. Custer and his forces killed at Battle of Little Big Horn by Sioux.
- Divine Comedy** begun by Dante (1307); probably finished in last year of his life (1321).
- Dominican Order** founded (1215).
- Dorr Rebellion** (1841-42). Thomas W. Dorr leads unsuccessful attempt to extend franchise in Rhode Island; franchise extended 1843.
- Dred Scott case** (1846). Dred Scott, Negro slave, sues for freedom on claim he has lived for a time on free soil; U. S. Supreme Court rules (Mar. 6, 1857) that Scott is not a citizen and has no standing in court.
- Dreyfus case** (1894). Capt. Alfred Dreyfus found guilty of treason in France and sentenced to Devil's Island. Finally acquitted (1906).
- Easter Rebellion** (April. 24, 1916). Irish nationalists unsuccessfully attempt to throw off British rule.
- Edict of Nantes** (1598). Extended toleration to Huguenots (French Protestants); its revocation (1685) caused widespread persecution of Huguenots.
- Evolution trial.** *See* Scopes.
- Fawkes, Guy.** *See* Gunpowder Plot.
- Feudalism**, lord-vassal social system, established throughout Europe (9th century); begins to break up (14th-15th centuries).
- Franciscan Order** founded (1210).
- Franco-Prussian War** (1870-71). France defeated by German states; loses Alsace-Lorraine.
- Freedom of press** established in America as John Peter Zenger, New York editor, is acquitted in libel case against Gov. Cosby (1735).
- French and Indian War.** *See* Seven Years' War.
- French Revolution** (1789-99). Outstanding events: 1789—Bastille destroyed (July 14). Feudal rights abolished (Aug. 4). 1792—September Massacres (Sept. 2-6). France becomes republic (Sept. 21). 1793—Louis XVI beheaded (Jan. 21); Marie Antoinette beheaded (Oct. 16). Reign of Terror (spring 1793-summer 1794). 1795—Napoleon heads army. Directory established (Oct. 27). (Revolution merges into Napoleonic Wars.)
- Gold rush** develops as gold is discovered at Sutter's Mill, near Sacramento, Calif. (Jan. 2, 1848).
- Great Rebellion** (1642-49). Civil wars in England. Charles I beheaded (Jan. 30, 1649); Cromwell establishes Commonwealth (1649).
- Great Wall of China** begun (255 B.C.).
- Gregorian Calendar** replaces Julian Calendar in Catholic countries (1582), in Britain and her Colonies (1752), in Russia (1918).
- Gunpowder Plot** (1605). Guy Fawkes, agent of conspirators against King and Parliament, seized as he is about to blow up House of Lords (Nov. 5).
- Hamilton-Burr duel** (July 11, 1804) results in Hamilton's death next day.
- Hastings, Battle of** (1066). Normans led by William the Conqueror invade England.
- Hegira** (A.D. 622). Mohammed flees from Mecca to Medina. Year I of Mohammedan calendar.

S. declares war (Apr. 6). Battle of Caporetto (Oct. 24-Dec. 26). 1918—Second Battle of the Somme (Aug. 21-Sept. 3). Third Battle of the Aisne (May 27-June 6). Second Battle of the Marne (July 15-Aug. 7). U. S. troops take St. Mihiel (Sept. 13). Battle of the Meuse-Argonne (Sept. 20-Nov. 11). Allies break Hindenburg line (Oct. 5). Armistice signed (Nov. 11).

**Zenger case**. See Freedom of press.

**Execution for murder**: John Billington, Massachusetts, 1630.

**Five and Ten Cents Store**: Founded by Frank Woolworth, Utica, N. Y., 1879 (moved to Lancaster, Pa., same year).

**Fraternity**: Phi Beta Kappa; founded Dec. 5, 1776, at College of William and Mary.

**Law to be declared unconstitutional** by U. S. Supreme Court: Judiciary Act of 1789. Case: Marbury vs. Madison, 1803.

**Library, circulating**: Philadelphia, 1731.

**Newspaper**: *The Boston News-Letter*, April, 1704.

**Newspaper, illustrated daily**: *New York Daily Graphic*, 1873.

**Newspaper published daily**: *Pennsylvania Packet and General Advertiser*, Philadelphia, Sept., 1784.

**Newsreel**: Pathé Frères of Paris, in 1910, circulated a weekly issue of their *Pathé Journal*.

**Normal school**: Lexington, Mass., established by Horace Mann, 1837.

**Oil well, commercial**: Titusville, Pa., 1859.

**Panel quiz show on radio**: *Information Please*, May 17, 1938.

**Postage stamps issued**: 1847.

Postal Savings Bank: 1911.

President pro tempore of the U. S. Senate: John Langdon, of New Hampshire, 1789.

Railroad, transcontinental: Central Pacific and Union Pacific railroads joined near Ogden, Utah, May 10, 1869.

Savings bank: The Provident Institute for Savings, Boston, 1816.

Science museum: Founded by Charleston (S. C.) Library Society, 1773.

Skyscraper: Home Insurance Co., Chicago, 1885 (10 floors, 2 added later).

Slaves brought into America: At Jamestown, Va., 1619, from a Dutch ship.

Sorority: Kappa Alpha Theta, at De Pauw University, 1870.

State to abolish capital punishment: Michigan, 1847.

State to enter Union after original 13: Vermont, 1791.

State to ratify U. S. Constitution: Delaware, Dec. 7, 1787.

Steam-heated building: Eastern Hotel, Boston, 1845.

Steam railroad: Baltimore & Ohio, 1830.

Strike on record by union: Journeymen Printers, New York, 1776.

Subway: Opened in Boston, 1897.

"Tabloid" picture newspaper: *The Illustrated Daily News* (now *The Daily News*), New York City, 1919.

Tenement house: New York City, 1833.

Vaudeville theater: Gaiety Museum, Boston, 1883.

War declaration against us before we declared war: By Japan, Dec. 7, 1941.

Woman cabinet member: Frances Perkins; Secretary of Labor, 1933.

Woman candidate for President: Belva Ann Bennett Lockwood, National Equal Rights party, 1884.

Woman doctor of medicine: Elizabeth Blackwell; received M.D. from Geneva Medical College of Western New York, 1849.

Woman elected governor of a state: Mrs. Nellie Tayloe Ross, Wyoming, 1925.

Woman elected to U. S. Senate: Mrs. Hattie Caraway, Arkansas; elected November 1932.

Woman graduate of law school: Mrs. Ada H. Kepley, Union College of Law, Chicago, 1870.

Woman member of U. S. House of Representatives: Jeannette Rankin; elected November, 1916.

Woman member of U. S. Senate: Mrs. Rebecca Latimer Felton of Georgia; appointed Oct. 3, 1922.

Woman suffrage granted: Wyoming Territory, 1869.

Written constitution: *Fundamental Orders of Connecticut*, 1639.

Zoo: Philadelphia, 1874.

## Societies and Foundations

AMERICAN BIBLE SOCIETY: Founded 1816. Purpose is to encourage wider circulation and use of Holy Scriptures without purpose of profit.

BOY SCOUTS OF AMERICA: Founded 1910. Purpose is to teach patriotism and citizenship, outdoor activities, and the importance of religion in daily life.

CAMP FIRE GIRLS, INC.: Founded 1910. Purpose is to perpetuate spiritual ideas of the home and to stimulate and aid in formation of habits making for health and character.

CARNEGIE CORPORATION OF NEW YORK: Founded 1911 by Andrew Carnegie. Purpose is to advance and diffuse knowledge and understanding among people of U. S. and British Commonwealth. Grants are awarded to colleges and organizations engaged in research. Assets (1952): \$175,000,000.

CARNEGIE ENDOWMENT FOR INTERNATIONAL PEACE: Founded 1910 by Andrew Carnegie. Purpose is to further friendly understanding among nations

and to study problems of international organization: Assets (1952): \$10,000,000.

COMMONWEALTH FUND: Founded 1918 by Mrs. Stephen V. Harkness. Purpose is to provide grants to aid medical schools, and medical experimentation. Assets (1952): \$85,000,000.

ELKS, BENEVOLENT AND PROTECTIVE ORDER OF: Founded 1868. Purpose is to practice charity, justice, brotherly love and faithfulness. Charitable expenditures (1952): \$6,000,000 among such fields as cerebral palsy, blood banks, tuberculosis, etc.

FORD FOUNDATION: Founded 1936 by Henry Ford and his family. Purpose is to devote resources to programs for advancement of peace, education, behavioral sciences, democratic institutions and economic stability. Among its major subsidiaries are: Fund for Advancement of Education and Fund for Adult Education. Assets (1953): \$518,422,069.

FREEMASONRY: Introduced into American Colonies before 1730. Purpose is the moral and spiritual elevation of its

members and, through them, of mankind. Masonic orders in U. S. include: Royal Arch, Knights Templar, Scottish Rites. For 1953 sports champions and records,  
see special section beginning on Page 856.

## BASEBALL

THE POPULAR TRADITION that baseball was invented by Abner Doubleday at Cooperstown, N. Y., in 1839, has been enshrined in the Hall of Fame and National Museum of Baseball erected in that town, but research has proved that a game called "Base Ball" was played in this country and England before 1839. However, the first team baseball as we know it was played at the Elysian Fields, Hoboken, N. J., on June 19, 1846, between the Knickerbockers and the New York Nine. There was a gradual growth of baseball and an improvement of equipment and playing skill in the next fifty years. Soldiers returning home from the Civil War spread over the country the game they had learned to play in camp.

Historians have it that the first pitcher to throw a curve was William A. (Candy) Cummings in 1867. The Cincinnati Red Stockings were the first all-professional team and in 1869 they played 64 games without a loss. The standard ball of the

same size and weight, still the rule, was adopted in 1872. The first catcher's mask was worn in 1875. The National League was organized in 1876. The first chest protector was donned in 1885. The three-strike rule was put on the books in 1887 and the four-ball ticket to first base came in 1889. The pitching distance, formerly shorter, was lengthened to 60 feet 6 inches in 1893 and the rules have been only slightly modified since that time.

The American League, under the vigorous leadership of B. B. Johnson, blossomed forth as a major league in 1901. Judge Kenesaw Mountain Landis, by action of the two major leagues, became Commissioner of Baseball in 1921 and, upon his death (1944), Albert B. Chandler, former United States Senator from Kentucky, was elected to that office (1945). Chandler failed to obtain a new contract, and he was succeeded by Ford C. Frick (1951), the National League president.

### PROFESSIONAL BASEBALL GOVERNMENT

#### NATIONAL LEAGUE—AMERICAN LEAGUE—NATIONAL ASSOCIATION

Ford C. Frick, Commissioner

Charles M. Segar, Secretary-Treasurer

30 Rockefeller Plaza, New York 20, N. Y.

#### NATIONAL LEAGUE

## Record of World Series Games

(No series in 1904.)

Figures in parentheses indicate number of victories for each club. Pitchers named are winner and loser, respectively.

### 1903—BOSTON A. L. (5) vs. PITTSBURGH N. L. (3) (Not under Brush rules)

Managers—J. J. Collins, Boston; F. C. Clarke, Pittsburgh.

Oct. 1—Pittsburgh (Phillippe).....	7	Boston (Young).....	3	At Boston
Oct. 2—Boston (Dinneen).....	3	Pittsburgh (Leever).....	0	At Boston
Oct. 3—Pittsburgh (Phillippe).....	4	Boston (Hughes).....	2	At Boston
Oct. 6—Pittsburgh (Phillippe).....	5	Boston (Dinneen).....	4	At Pittsburgh
Oct. 7—Boston (Young).....	11	Pittsburgh (Kennedy).....	2	At Pittsburgh
Oct. 8—Boston (Dinneen).....	6	Pittsburgh (Leever).....	3	At Pittsburgh
Oct. 10—Boston (Young).....	7	Pittsburgh (Phillippe).....	3	At Pittsburgh
Oct. 13—Boston (Dinneen).....	3	Pittsburgh (Phillippe).....	0	At Boston

### 1905—NEW YORK N. L. (4) vs. PHILADELPHIA A. L. (1)

Managers—John J. McGraw, New York; Connie Mack, Philadelphia.

Oct. 9—New York (Mathewson).....	3	Philadelphia (Plank).....	0	At Philadelphia
Oct. 10—Philadelphia (Bender).....	3	New York (McGinnity).....	0	At New York
Oct. 12—New York (Mathewson).....	9	Philadelphia (Coakley).....	0	At Philadelphia
Oct. 13—New York (McGinnity).....	1	Philadelphia (Plank).....	0	At New York
Oct. 14—New York (Mathewson).....	2	Philadelphia (Bender).....	0	At New York

### 1906—CHICAGO A. L. (4) vs. CHICAGO N. L. (2)

Managers—Fielder Jones, Chicago A. L.; Frank L. Chance, Chicago N. L.

Oct. 9—Chicago A (Altrock).....	2	Chicago N (Brown).....	1	At Chicago Nat. Pk.
Oct. 10—Chicago N (Reulbach).....	7	Chicago A (White).....	1	At Chicago Am. Pk.
Oct. 11—Chicago A (Walsh).....	3	Chicago N (Pfister).....	0	At Chicago Nat. Pk.
Oct. 12—Chicago N (Brown).....	1	Chicago A (Altrock).....	0	At Chicago Am. Pk.
Oct. 13—Chicago A (Walsh).....	8	Chicago N (Pfister).....	6	At Chicago Nat. Pk.
Oct. 14—Chicago A (White).....	8	Chicago N (Brown).....	3	At Chicago Am. Pk.

### 1907—CHICAGO N. L. (4) vs. DETROIT A. L. (0)

Managers—Frank L. Chance, Chicago; Hugh Jennings, Detroit.

Oct. 8—Chicago (tie).....	3	Detroit (tie).....	3	At Chicago (12 inn.)
Oct. 9—Chicago (Pfister).....	3	Detroit (Mullin).....	1	At Chicago
Oct. 10—Chicago (Reulbach).....	5	Detroit (Siever).....	1	At Chicago
Oct. 11—Chicago (Overall).....	6	Detroit (Donovan).....	1	At Detroit
Oct. 12—Chicago (Brown).....	2	Detroit (Mullin).....	0	At Detroit

### 1908—CHICAGO N. L. (4) vs. DETROIT A. L. (1)

Managers—Frank L. Chance, Chicago; Hugh Jennings, Detroit.

Oct. 10—Chicago (Brown).....	10	Detroit (Summers).....	6	At Detroit
Oct. 11—Chicago (Overall).....	6	Detroit (Donovan).....	1	At Chicago
Oct. 12—Detroit (Mullin).....	8	Chicago (Pfister).....	3	At Chicago
Oct. 13—Chicago (Brown).....	3	Detroit (Summers).....	0	At Detroit
Oct. 14—Chicago (Overall).....	2	Detroit (Donovan).....	0	At Detroit

### 1909—PITTSBURGH N. L. (4) vs. DETROIT A. L. (3)

Managers—Fred C. Clarke, Pittsburgh; Hugh Jennings, Detroit.

Oct. 8—Pittsburgh (Adams).....	4	Detroit (Mullin).....	1	At Pittsburgh
Oct. 9—Detroit (Donovan).....	7	Pittsburgh (Camnitz).....	2	At Pittsburgh
Oct. 11—Pittsburgh (Maddox).....	8	Detroit (Summers).....	6	At Detroit
Oct. 12—Detroit (Mullin).....	5	Pittsburgh (Leifield).....	0	At Detroit
Oct. 13—Pittsburgh (Adams).....	8	Detroit (Summers).....	4	At Pittsburgh
Oct. 14—Detroit (Mullin).....	5	Pittsburgh (Willis).....	4	At Detroit
Oct. 16—Pittsburgh (Adams).....	8	Detroit (Donovan).....	0	At Detroit

**1910—PHILADELPHIA A. L. (4) vs. CHICAGO N. L. (1)**

Managers—Connie Mack, Philadelphia; Frank L. Chance, Chicago.

Oct. 17—Philadelphia (Bender).....	4	Chicago (Overall).....	1	At Philadelphia
Oct. 18—Philadelphia (Coombs).....	9	Chicago (Brown).....	3	At Philadelphia
Oct. 20—Philadelphia (Coombs).....	12	Chicago (McIntire).....	5	At Chicago
Oct. 22—Chicago (Brown).....	4	Philadelphia (Bender).....	3	At Chicago (10 inn.)
Oct. 23—Philadelphia (Coombs).....	7	Chicago (Brown).....	2	At Chicago

**1911—PHILADELPHIA A. L. (4) vs. NEW YORK N. L. (2)**

Managers—Connie Mack, Philadelphia; John J. McGraw, New York.

Oct. 14—New York (Mathewson).....	2	Philadelphia (Bender).....	1	At New York
Oct. 16—Philadelphia (Plank).....	3	New York (Marquard).....	1	At Philadelphia
Oct. 17—Philadelphia (Coombs).....	3	New York (Mathewson).....	2	At New York (11 inn.)
Oct. 24—Philadelphia (Bender).....	4	New York (Mathewson).....	2	At Philadelphia
Oct. 25—New York (Crandall).....	4	Philadelphia (Plank).....	3	At New York (10 inn.)
Oct. 26—Philadelphia (Bender).....	13	New York (Ames).....	2	At Philadelphia

**1912—BOSTON A. L. (4) vs. NEW YORK N. L. (3)**

Managers—J. Garland Stahl, Boston; John J. McGraw, New York.

Oct. 3—Boston (Wood).....	4	New York (Tesreau).....	3	At New York
Oct. 9—Boston (tie).....	6	New York (tie).....	6	At Boston (11 inn.)
Oct. 10—New York (Marquard).....	2	Boston (O'Brien).....	1	At Boston
Oct. 11—Boston (Wood).....	3	New York (Tesreau).....	1	At New York
Oct. 12—Boston (Bedient).....	2	New York (Mathewson).....	1	At Boston
Oct. 14—New York (Marquard).....	5	Boston (O'Brien).....	2	At New York
Oct. 15—New York (Tesreau).....	11	Boston (Wood).....	4	At Boston
Oct. 16—Boston (Wood).....	3	New York (Mathewson).....	2	At Boston (10 inn.)

**1913—PHILADELPHIA A. L. (4) vs. NEW YORK N. L. (1)**

Managers—Connie Mack, Philadelphia; John J. McGraw, New York.

Oct. 7—Philadelphia (Bender).....	6	New York (Marquard).....	4	At New York
Oct. 8—New York (Mathewson).....	3	Philadelphia (Plank).....	0	At Philadelphia (10 inn.)
Oct. 9—Philadelphia (Bush).....	8	New York (Tesreau).....	2	At New York
Oct. 10—Philadelphia (Bender).....	6	New York (Demaree).....	5	At Philadelphia
Oct. 11—Philadelphia (Plank).....	3	New York (Mathewson).....	1	At New York

**1914—BOSTON N. L. (4) vs. PHILADELPHIA A. L. (0)**

Managers—George T. Stallings, Boston; Connie Mack, Philadelphia.

Oct. 9—Boston (Rudolph).....	7	Philadelphia (Bender).....	1	At Philadelphia
Oct. 10—Boston (James).....	1	Philadelphia (Plank).....	0	At Philadelphia
Oct. 12—Boston (James).....	5	Philadelphia (Bush).....	4	At Boston (12 inn.)
Oct. 13—Boston (Rudolph).....	3	Philadelphia (Shawkey).....	1	At Boston

**1915—BOSTON A. L. (4) vs. PHILADELPHIA N. L. (1)**

Managers—William Carrigan, Boston; Patrick J. Moran, Philadelphia.

Oct. 8—Philadelphia (Alexander).....	3	Boston (Shore).....	1	At Philadelphia
Oct. 9—Boston (Foster).....	2	Philadelphia (Mayer).....	1	At Philadelphia
Oct. 11—Boston (Leonard).....	2	Philadelphia (Alexander).....	1	At Boston
Oct. 12—Boston (Shore).....	2	Philadelphia (Chalmers).....	1	At Boston
Oct. 13—Boston (Foster).....	5	Philadelphia (Rixey).....	4	At Philadelphia

**1916—BOSTON A. L. (4) vs. BROOKLYN N. L. (1)**

Managers—William Carrigan, Boston; Wilbert J. Robinson, Brooklyn.

Oct. 7—Boston (Shore).....	6	Brooklyn (Marquard).....	5	At Boston
Oct. 9—Boston (Ruth).....	2	Brooklyn (Smith).....	1	At Boston (14 inn.)
Oct. 10—Brooklyn (Coombs).....	4	Boston (Mays).....	3	At Brooklyn
Oct. 11—Boston (Leonard).....	6	Brooklyn (Marquard).....	2	At Brooklyn
Oct. 12—Boston (Shore).....	4	Brooklyn (Pfeffer).....	1	At Boston

**1917—CHICAGO A. L. (4) NEW YORK N. L. (2)**

Managers—Clarence H. Rowland, Chicago; John J. McGraw, New York.

Oct. 6—Chicago (Cicotte).....	2	New York (Sallee).....	1	At Chicago
Oct. 7—Chicago (Faber).....	7	New York (Anderson).....	2	At Chicago
Oct. 10—New York (Benton).....	2	Chicago (Cicotte).....	0	At New York
Oct. 11—New York (Schupp).....	5	Chicago (Faber).....	0	At New York
Oct. 13—Chicago (Faber).....	8	New York (Sallee).....	5	At Chicago
Oct. 15—Chicago (Faber).....	4	New York (Benton).....	2	At New York

**1918—BOSTON A. L. (4) vs. CHICAGO N. L. (2)**

Managers—E. G. Barrow, Boston; Fred L. Mitchell, Chicago.

Sept. 5—Boston (Ruth).....	1	Chicago (Vaughn).....	0	At Chicago
Sept. 6—Chicago (Tyler).....	3	Boston (Bush).....	1	At Chicago
Sept. 7—Boston (Mays).....	2	Chicago (Vaughn).....	1	At Chicago
Sept. 9—Boston (Ruth).....	3	Chicago (Douglas).....	2	At Boston
Sept. 10—Chicago (Vaughn).....	3	Boston (Jones).....	0	At Boston
Sept. 11—Boston (Mays).....	2	Chicago (Tyler).....	1	At Boston

**1919—CINCINNATI N. L. (5) vs. CHICAGO A. L. (3)**

Managers—Patrick J. Moran, Cincinnati; William Gleason, Chicago.

Oct. 1—Cincinnati (Ruether).....	9	Chicago (Cicotte).....	1	At Cincinnati
Oct. 2—Cincinnati (Sallee).....	4	Chicago (Williams).....	2	At Cincinnati
Oct. 3—Chicago (Kerr).....	3	Cincinnati (Fisher).....	0	At Chicago
Oct. 4—Cincinnati (Ring).....	2	Chicago (Cicotte).....	0	At Chicago
Oct. 6—Cincinnati (Eller).....	5	Chicago (Williams).....	0	At Chicago
Oct. 7—Chicago (Kerr).....	5	Cincinnati (Ring).....	4	At Cincinnati
Oct. 8—Chicago (Cicotte).....	4	Cincinnati (Sallee).....	1	At Cincinnati
Oct. 9—Cincinnati (Eller).....	10	Chicago (Williams).....	5	At Chicago (10 inn.)

**1920—CLEVELAND A. L. (5) vs. BROOKLYN N. L. (2)**

Managers—Tris Speaker, Cleveland; Wilbert J. Robinson, Brooklyn.

Oct. 5—Cleveland (Coveleskie).....	3	Brooklyn (Marquard).....	1	At Brooklyn
Oct. 6—Brooklyn (Grimes).....	3	Cleveland (Bagby).....	0	At Brooklyn
Oct. 7—Brooklyn (Smith).....	2	Cleveland (Caldwell).....	1	At Brooklyn
Oct. 9—Cleveland (Coveleskie).....	5	Brooklyn (Cadore).....	1	At Cleveland
Oct. 10—Cleveland (Bagby).....	8	Brooklyn (Grimes).....	1	At Cleveland

\* Bought by Boston Americans from Baltimore and farmed to Providence (I). † Coach.

Ruth's share from ten world series amounted to \$41,445. In addition, he was reputed to have made \$1,000,000 from endorsements, barnstorming tours, movies and radio appearances.

Ron Necciai of the Bristol club of the Appalachian League, set a strike-out record for organized baseball when he fanned twenty-seven batters in nine innings and pitched the Twins to a 7-0, no-hit victory over the Welch Miners on May 13, 1952. In the second a batter grounded out to

the shortstop, but in the ninth the 19-year-old right-hander struck out four, a feat made possible when a third strike eluded his catcher. Eight nights later the Pittsburgh farmhand fanned twenty-four Kingsport batters while pitching a two-hit, 7-1 victory.

\* Played tie game.

Longest Game in the Majors

The 26-inning 1-1 tie game between Brooklyn and Boston of the National League, played at Braves Field, Boston, on May 1, 1920, still stands as the longest contest in major league history. Both pitchers, Joe Oeschger of the Braves and

Leon Cadore of the Robins, as they were then called because they were managed by Wilbert Robinson, went the distance. George (Miracle Man) Stallings guided Boston. The game was called because of darkness.

(Called, darkness)

Runs batted in—Olson, Boeckel.

Two-base hits—Maranville, Oeschger. Three-base hits—Cruise. Stolen bases—Myers, Hood. Sacrifices—Hood, Powell, Cruise, Holke, O'Neil, Oeschger. Double plays—Olson and Konetchy; Oeschger, Holke and Gowdy. Left on bases—Boston 16, Brooklyn 11. Earned runs—Boston 1, Brooklyn 1. Struck out—b Cadore 7 (Pick, Mann, Cruise, Gowdy, Oeschger 3), Oeschger 7 (Olson, Nels 2, Johnston, Hood, Elliott, Cadore). Bases on balls—Off Cadore 5 (Powell 3, Mann, Cruise), Oeschger 4 (Wheat, Hood, Konetchy, Krueger). Wild pitch—Oeschger. Umpires—McCormick and Hart. Time—3:50. Attendance—2,000.

## GOLF

IT MAY BE that golf originated in Holland—historians believe it did—but certainly Scotland fostered the game and is famous for it. In fact, in 1457 the Scottish Parliament, disturbed because football and golf had lured young Scots from the more soldierly exercise of archery, passed an ordinance that "futeball and golf be utterly cryit down and nocht usit". James I and Charles I of the royal line of Stuarts were golf enthusiasts, whereby the game came to be known as "the royal and ancient game of golf".

The golf balls used in the early games were leather covered and stuffed with feathers. Clubs of all kinds were fashioned by hand to suit individual players. The great step in spreading the game came with the change from the feather ball to the gutta-percha ball about 1850, and in 1860 formal competition began with the establishment of an annual tournament for the British open championship. There are records of "golf clubs" in the United

States as far back as colonial days but no proof of actual play before John Reid and some friends laid out six holes on the Reid lawn in Yonkers, N. Y., in 1888 and played there with the golf balls and clubs brought over from Scotland by Robert Lockhart. This group then formed the St. Andrews Golf Club of Yonkers, and golf was established in this country.

However, it remained a rather sedate and almost aristocratic pastime until a 20-year-old ex-caddy, Francis Ouimet of Boston, defeated two great British professionals, Harry Vardon and Ted Ray, in the United States Open championship at Brookline, Mass., in 1913. This feat put the game and Francis Ouimet on the front pages of the newspapers and stirred a wave of enthusiasm for the sport. The greatest feat so far in golf history was that of Robert Tyre Jones, Jr. of Atlanta, Ga., in winning the British Open, the British Amateur, the U. S. Open and the U. S. Amateur titles in one year, 1930.

## BOXING

**W**HETHER it be called pugilism, prize fighting or boxing, there is no tracing "the Sweet Science" to any definite source. Tales of rivals exchanging blows for fun, fame or money go back to earliest recorded history and classical legend. There was a mixture of boxing and wrestling called the "pancratium" in the ancient Olympic Games and in such contests the rivals belabored one another with hands fortified with heavy leather wrappings that were sometimes studded with metal. More than one Olympic competitor lost his life at this brutal exercise.

There was little law or order in pugilism until Jack Broughton, one of the early champions of England, drew up a set of rules for the game in 1743. Broughton, called "the father of English boxing," also is credited with having invented boxing gloves. However, these gloves—or "mufflers" as they were called—were used only in teaching "the manly art of self-defense" or in training bouts. All professional

championship fights were contested with "bare knuckles" until 1892 when John L. Sullivan lost the heavyweight championship of the world to James J. Corbett in New Orleans in a bout in which both contestants wore regulation gloves.

The Broughton rules were superseded by the London Prize Ring Rules of 1838. The 8th Marquess of Queensberry, with the help of John G. Chambers, put forward the "Queensberry Rules" in 1866, a code that called for gloved contests. Amateurs took quickly to the Queensberry Rules, the professionals slowly.

There is no official international set of rules for boxing even today. Amateur organizations set rules for amateurs in different countries and professional rules set by boxing commissions vary even in different sections of the United States, but the variations are for the most part minor. A prize fighter doesn't have to change his style greatly to ply his trade anywhere in the world.

Sept. 23, 1926	Philadelphia	†Gene Tunney, 189½ (28)...	Jack Dempsey, 190 (31).....	10	Pop Reilly
June 12, 1930	New York	Max Schmeling, 188 (24).....	Jack Sharkey, 197 (27).....	WF 4	Jim Crowley
June 21, 1932	Long Island City	Jack Sharkey, 205 (29).....	Max Schmeling, 188 (26)...	15	Cunboat Smith
June 29, 1933	Long Island City	Primo Carnera, 260½ (26)...	Jack Sharkey, 201 (30).....	KO 6	Arthur Donovan
June 14, 1934	Long Island City	Max Baer, 209½ (25).....	Primo Carnera, 263¼ (27)...	KO 11	Arthur Donovan
June 13, 1935	Long Island City	Jim Braddock, 193¾ (29)...	Max Baer, 209½ (26).....	15	Jack McAvoy
June 22, 1937	Chicago	Joe Louis, 197¼ (23).....	Jim Braddock, 197 (31).....	KO 8	Tommy Thomas
June 22, 1949	Chicago	(a)Ezzard Charles, 181¾ (27)...	Joe Walcott, 195½ (35)...	15	Davey Miller
Sept. 27, 1950	New York	(b)Ezzard Charles, 184½ (29)...	Joe Louis, 218 (36).....	15	Mark Conn
July 18, 1951	Pittsburgh	Joe Walcott, 194 (37).....	Ezzard Charles, 182 (30)...	KO 7	Buck McTiernan
Sept. 23, 1952	Philadelphia	Rocky Marciano, 184 (28)...	Joe Walcott, 196 (38).....	KO 13	Charley Dagerf

\* Lack of opposition caused Jeffries to retire in March 1906. He named Marvin Hart and Jack Root as the leading contenders and agreed to referee their fight at Reno, Nev., on July 3, 1905, with the stipulation that he would designate the winner the world champion. Hart, 190 (28), knocked out Root, 171 (23), in the twelfth round. † Burns claimed the title after defeating Hart. Philadelphia Jack O'Brien became another claimant after fighting a 20-round draw with Burns at Los Angeles on Nov. 28, 1906, with Jeffries as the referee. Burns, 180 (25), eliminated O'Brien, 167 (29), by defeating him in 20 rounds at Los Angeles, May 8, 1907. Charles Eytan was the referee. ‡ Tunney retired after his bout with Tom Heenan in New York on July 25, 1928. Tunney, 192 (30), knocked out Heenan, 203 (30½), in the eleventh round. Ed Forbes was the referee.

(a) Recognized by the National Boxing Association because Louis had announced his retirement on March 1, 1949. (b) Charles gained undisputed possession of the title by beating Louis, who came out of retirement in an effort to regain the crown.

## BARE-KNUCKLE HEAVYWEIGHT CHAMPIONS, 1719-1892

1719—Jim Figg  
 1734—George Taylor  
 1740—Jack Broughton  
 1750—Jack Stack  
 1760—Bill Stevens  
 1761—George Meggs  
 1765—Bill Darts  
 1777—Harry Solters  
 1780—Jack Harris  
 1785—Tom (Jackling) Johnson  
 1790—Big Ben Brain  
 1792—Daniel Mendoza  
 1795—John Jackson (retired)  
 1802—Jem Belcher  
 1805—Henry Pearce (Game Chicken)  
 1808—John Gully (declined title)  
 1809—Tom Cribb received belt, not transferable, and cup.  
 1824—Tom Spring received four cups; resigned title.  
 1825—Jem Ward received belt, not transferable.  
 1838—James (Deaf) Burke claimed title.  
 1839—William Thompson (Bendigo) beat Burke; claimed championship; received belt from Jem Ward.  
 1841—Nick Ward (Jem's brother) beat Ben Caunt, Feb. 2. In return match Caunt beat Nick Ward and received belt by subscription. It was transferable.  
 1845—Thompson beat Caunt and got belt.  
 1850—Bill Perry (The Tipton Slasher), after fight with Paddock, claimed title.  
 1851—Harry Broome won title from Perry.  
 1853—Perry claimed title when Broome forfeited £200 to him in a match; retired from ring on Aug. 13.  
 1857—Tom Sayers beat Perry for £200 a side and new belt.  
 1860—Sayers retired after 42-round draw with John C. Heenan (The Benicia Boy), leaving old belt open for competition.

1860—Sam Hurst (The Stalybridge Infant) beat Paddock and received belt.  
 1861—Jem Mace beat Hurst.  
 1862—Mace beat Tom King for £200 a side and the belt.  
 1862—King beat Mace and claimed belt. Subsequently gave it up. Declined to meet Mace again. Mace claimed belt.  
 1863—King beat Heenan for £1,000 a side.  
 1865—Joe Wormald beat Andrew Marsden for £200 a side and belt, which had been claimed by both. Belt was given to Wormald, who forfeited £120 to Mace.  
 1866—Mace and Joe Goss fought draw with £200 a side and belt at stake.  
 1867—Wormald received £200 forfeit from Ned O'Baldwin and claimed belt when O'Baldwin failed to appear at starting place.  
 1867—Mace and O'Baldwin drew; £200 a side; title and belt in abeyance.  
 1868—Wormald and O'Baldwin drew; £200 a side and title in America.  
 1869—Mike McCoole beat Tom Allen in America for world championship.  
 1870—Mace beat Allen in America for world championship.  
 1871—Mace and Joe Coburn fought draw for championship; £500 a side.  
 1882—John L. Sullivan defeated Paddy Ryan for American championship only; 9 rounds, Mississippi City, Miss. (London Prize Ring rules).  
 1885—Jem Smith beat Jack Davis for £100 a side and championship of England.  
 1887—Jake Kilrain and Jem Smith drew; \$10,000 and Police Gazette Championship of World belt.  
 1889—John L. Sullivan beat Jake Kilrain, 75 rounds, Richburg, Miss., July 8, in last bare-knuckle championship fight; \$10,000 a side and Police Gazette Belt. (Sullivan claimed world title because of draw fought by Kilrain with Smith, England's titleholder.)

## Other World Boxing Titleholders

## LIGHT HEAVYWEIGHT CHAMPIONS

- 1903 —Jack Root, George Gardner  
 1903-05 —Bob Fitzsimmons  
 1905-12 —Philadelphia Jack O'Brien  
 1912-16 —Jack Dillon  
 1916-20 —Battling Levinsky  
 1920-22 —Georges Carpentier  
 1923 —Battling Siki  
 1923-25 —Mike McTigue  
 1925-26 —Paul Berlenbach  
 1926-27 —Jack Delaney (a)  
 1927 —Mike McTigue  
 1927-29 —Tommy Loughran (a)  
 1930-34 —Maxie Rosenbloom  
 1934-35 —Bob Olin  
 1935-39 —John Henry Lewis (a)  
 1939 —Melio Bettina  
 1939-41 —Billy Conn (a)  
 1941-48 —Gus Lesnevich  
 1948-50 —Freddie Mills  
 1950-53 —Joey Maxim  
 1953 —Archie Moore

(a) Abandoned title.

## MIDDLEWEIGHT CHAMPIONS

- 1867-72 —Tom Chandler (bare knuckles).  
 1872-81 —Geo. Rourke (bare knuckles and gloves)  
 1881-82 —Mike Donovan (r)  
 1884-91 —Jack (Nonpareil) Dempsey  
 1891-97 —Bob Fitzsimmons  
 1897-1907 —Tommy Ryan, Kid McCoy, Philadelphia Jack O'Brien (t)  
 1907-08 —Stanley Ketchel  
 1908 —Billy Papke  
 1908-10 —Stanley Ketchel  
 1910-13 —Billy Papke  
 1913 —Frank Klaus  
 1913-14 —George Chip  
 1914-17 —Al McCoy  
 1917-20 —Mike O'Dowd  
 1920-23 —Johnny Wilson  
 1923-26 —Harry Greb  
 1926 —Tiger Flowers  
 1926-31 —Mickey Walker (a)  
 1931-32 —Gorilla Jones (NBA); Ben Jeby (N. Y. Comm.)  
 1932-37 —Marcel Thil\*  
 1938 —Al Hostak and Solly Krieger (NBA)  
 1939 —Solly Krieger, Al Hostak (NBA); Ceferino Garcia (N. Y. Comm.)  
 1940 —Tony Zale (NBA); Ken Overlin (N. Y. Comm.)  
 1941 —Tony Zale (NBA); Billy Soose (N. Y. Comm.)†  
 1941-47 —Tony Zale  
 1947-48 —Rocky Graziano  
 1948 —Tony Zale  
 1948-49 —Marcel Cerdan  
 1949-51 —Jake La Motta  
 1951 —Ray Robinson, Randy Turpin  
 1951-52 —Ray Robinson (r)

(r) Retired. (t) Title claimants. (a) Abandoned title.  
 \* Thil's victory on a foul over Jones gave him a clear title claim, but the New York Commission withheld recognition. At various times during the 1932-37 period, championship recognition by the different bodies was given to the following: Ben Jeby, Lou Brouillard, Vince Dundee, Teddy Yarosz, Babe Risko, and Freddy Steele. Fred Apostoli knocked out Thil in 10 rounds at the Polo Grounds, Sept. 23, 1937, but did not claim the title because of an agreement made with Thil. This was Thil's last fight. † Soose abandoned his claim to the title and Zale became the undisputed champion by defeating George Abrams, who had beaten Soose three times.

## WELTERWEIGHT CHAMPIONS

- 1892-94 —Mysterious Billy Smith  
 1894-96 —Tommy Ryan  
 1896 —Kid McCoy (o)

- 1900 —Rube Ferns, Matty Matthews  
 1901 —Rube Ferns  
 1901-06 —Joe Walcott\*  
 1906-07 —Honey Melody  
 1907 —Mike (Twin) Sullivan†  
 1915 —Ted Lewis†  
 1919-22 —Jack Britton  
 1922-26 —Mickey Walker  
 1926-27 —Pete Latzo  
 1927-29 —Joe Dundee  
 1929-30 —Jackie Fields  
 1930 —Young Jack Thompson  
 1930-31 —Tommy Freeman  
 1931 —Young Jack Thompson  
 1931-32 —Lou Brouillard  
 1932-33 —Jackie Fields  
 1933 —Young Corbett 3d  
 1933-34 —Jimmy McLarnin  
 1934 —Barney Ross  
 1934-35 —Jimmy McLarnin  
 1935-38 —Barney Ross  
 1938-40 —Henry Armstrong  
 1940-41 —Fritz Zivic  
 1941-46 —Freddie Cochrane  
 1946-47 —Marty Servo (r)  
 1947-51 —Ray Robinson (a)  
 1951 —Johnny Bratton (NBA)  
 1951 —Kid Gavilan

(o) Outgrew class. \* Walcott lost on foul to Dixie Kid in 1904, but decision was disputed. Dixie Kid went abroad, outgrew class, and Walcott was again recognized as the champion. † Sullivan outgrew class. The title was claimed by Jimmy Gardner, Jimmy Clabby, Ray Bronson, Clarence (Kid) Ferns, Mike Gibbons, Kid Graves, Mike Glover, Ted Lewis, and Jack Britton but no one received recognition as titleholder until Ted Lewis established his claim in 1915. ‡ Lewis outpointed Britton to gain undisputed possession of the crown on Aug. 31, 1915, and fought Britton a number of times over a period of four years with varying results until March 17, 1919, when Britton became the undisputed titleholder by knocking out Lewis. (r) Retired. (a) Abandoned title.

## LIGHTWEIGHT CHAMPIONS

- 1885-96 —Jack McAuliffe\*  
 1896-99 —Kid Lavigne  
 1899-02 —Frank Erne  
 1902-08 —Joe Gans  
 1908-10 —Battling Nelson  
 1910-12 —Ad Wolgast  
 1912-14 —Willie Ritchie  
 1914-17 —Freddie Welsh  
 1917-25 —Benny Leonard (r)  
 1925 —Jimmy Goodrich  
 1941-42 —Sammy Angott†  
 1943 —Beau Jack, Bob Montgomery (N. Y. Comm.), Sammy Angott (NBA).  
 1944 —Beau Jack, Bob Montgomery (N. Y. Comm.), Sammy Angott, Juan Zurita (NBA).  
 1945 —Bob Montgomery (N. Y. Comm.), Juan Zurita, Ike Williams (NBA).  
 1946-47 —Bob Montgomery (N. Y. Comm.), Ike Williams (NBA).  
 1947-51 —Ike Williams  
 1951-52 —James Carter  
 1952 —Lauro Salas, James Carter

\* McAuliffe was champion of America, but never held the world crown, his battle for the world title with Jem Carney of England in 1887 resulting in a 74-round draw. (r) Retired. † Angott announced his retirement on Nov. 13, 1942, leaving the title vacant, but approximately two months later announced his comeback as challenger for the crown.

## FEATHERWEIGHT CHAMPIONS

- 1889 —Freddy Bogan  
 1890 —Billy Murphy  
 1892-1900 —George Dixon

## Featherweight Champions—(Cont.)

- 1900-01—Terry McGovern  
 1901 —Young Corbett (o)  
 1904-08—Brooklyn Tommy Sullivan  
 1908-12—Abe Attell  
 1912-23—Johnny Kilbane  
 1923 —Eugene Ciriui  
 1923-25—Johnny Dundee (o)  
 1925-27—Louis (Kid) Kaplan (o)  
 1927-28—Benny Bass  
 1928 —Tony Canzoneri  
 1928-29—Andre Routis  
 1929-32—Battling Battalino (o)  
 1932 —Tommy Paul (NBA); Kid Chocolate (N. Y. Comm.).  
 1933-36—Freddie Miller  
 1936-37—Pete Sarron  
 1937-38—Henry Armstrong (a)  
 1938-40—Joey Archibald  
 1940-41—Harry Jeffra, Joey Archibald  
 1941-42—Chalky Wright  
 1942-48—Willie Pep  
 1948-49—Sandy Saddler  
 1949-50—Willie Pep  
 1950 —Sandy Saddler

(o) Outgrew class. (a) Abandoned title.

## BANTAMWEIGHT CHAMPIONS

- 1890-92—George Dixon (o)  
 1894-99—Jimmy Barry (r)  
 1899-1900—Terry McGovern (o)  
 1901 —Harry Harris (o)  
 1902-03—Harry Forbes  
 1903-04—Frankie Neil  
 1904 —Joe Bowker (o)  
 1905-07—Jimmy Walsh (o)  
 1910-14—Johnny Coulon  
 1914-17—Kid Williams  
 1917-20—Pete Herman  
 1920-21—Joe Lynch  
 1921 —Pete Herman  
 1921-22—Johnny Buff  
 1922-24—Joe Lynch  
 1924 —Abe Goldstein  
 1924-25—Eddie (Cannonball) Martin  
 1925 —Charlie (Phil) Rosenberg (d)  
 1929-35—Al Brown  
 1935-36—Baltazar Sangchilli  
 1936 —Tony Marino  
 1936-37—Sixto Escobar  
 1937-38—Harry Jeffra  
 1938-40—Sixto Escobar (r)  
 1940-42—Lou Salica  
 1942-47—Manuel Ortiz  
 1947 —Harold Dade  
 1947-50—Manuel Ortiz  
 1950-52—Vic Towee  
 1952 —Jimmy Carruthers

(o) Outgrew class. (r) Retired. (d) Deprived of title when unable to make weight for championship bout.

## FLYWEIGHT CHAMPIONS

- 1916-23—Jimmy Wilde  
 1923-25—Pancho Villa\*  
 1925 —Frankie Genaro  
 1925-27—Fidel La Barba (r)  
 1927 —Corporal Izzy Schwartz†  
 1930 —Midget Wolgast (N. Y. Comm.); Frankie Genaro (NBA).  
 1931-32—Young Peraz†  
 1932-35—Jackie Brown  
 1935-38—Benny Lynch (r)  
 1939 —Peter Kane (a)  
 1943-47—Jackie Paterson (d)  
 1947-50—Rinty Monaghan (r)  
 1950 —Terry Allen  
 1950-52—Dado Marino  
 1952 —Yoshio Shirai

\* Villa died in 1925, Genaro claiming title. † Schwartz was recognized as champion by N. Y. Comm., but conditions in the class became confused and were not straightened out until an elimination tourney was held in November, 1929. ‡ Perez was recognized as world's champion by the International Boxing Union of Europe. (r) Retired. (a) Abandoned title. (d) Deprived of title.

## Famous Firsts in Boxing

First modern ring champion: Jim Flegg of England, 1719.

First set of boxing rules and first set of boxing gloves: Made by Jack Broughton, 1743.

First championship fight in America: Jacob Hyer beat Tom Beasley, 1816.

First glove fight: Between two English boxers, at Aix-la-Chapelle, France, October 8, 1818.

First contest in which motion pictures were filmed for general display to the public: Bob Fitzsimmons vs. Jim Corbett bout at Carson City, Nevada, 1897.

First million-dollar gate: Jack Dempsey vs. Georges Carpentier at Boyle's Thirty Acres, Jersey City, N. J., July 2, 1921 (\$1,789,238).

First round-by-round fight broadcast: Dempsey vs. Carpentier, 1921, J. Andrew White announcer.

First fight to draw over 100,000 people: Jack Dempsey vs. Gene Tunney at Philadelphia, 1926 (120,757).

First fight on television (publicly screened): Eric Boon vs. Arthur Danahar, Harringay Arena, London, England, February 23, 1939.

## Neil Memorial Award Winners

The Edward J. Neil Memorial Plaque is given annually by the Boxing Writers' Association of New York to the individual who has done the most to further the cause of the sport. The winners:

- |   |                      |
|---|----------------------|
| 1938 Jack Dempsey                       | 1945 James J. Walker |
| 1939 Billy Conn                         | 1946 Tony Zale       |
| 1940 Henry Armstrong                    | 1947 Gus Lesnevich   |
| 1941 Joe Louis                          | 1948 Ike Williams    |
| 1942 Sgt. Barney Ross                   | 1949 Ezzard Charles  |
| 1943 All U. S. boxers in service        | 1950 Ray Robinson    |
| 1944 Lt. Comdr. Benny Leonard, U.S.M.S. | 1951 Joe Walcott     |
| 1952 Rocky Marciano                     |                      |

## Joe Louis' Title Fights

## Browne Barrel-Jumping Victor

A Detroit fireman, Terrance Browne, retained his world barrel-jumping championship on Jan. 11, 1953, by going over 14 barrels for a distance of 26 feet 9 inches.

at the Grossinger (N. Y.) Country Club ice rink. Yvonne Jolin of Montreal cleared 13 kegs for a distance of 26 feet to finish second. Browne set the world record of 28 feet 3 inches in winning the title in 1952.

## THE OLYMPIC GAMES

(W)—Site of Winter Games. (S)—Site of Summer Games.

1896—Athens	1912—Stockholm	1928—Amsterdam (S)	1936—Berlin (S)
1900—Paris	1920—Antwerp	1932—Lake Placid (W)	1948—St. Moritz (W)

1906—Athens	1924—Paris (S)	1936—Garmisch-Parten-	1952—Oslo (W)
1908—London	1928—St. Moritz (W)	kirchen (W)	1952—Helsinki (S)

THE first Olympic Games of which there is record occurred in 776 B.C. and consisted of one event, a great foot race of about 200 yards held on a plain by the River Alpheus (now the Ruphla) just outside the little town of Olympia in Greece. It was from that date that the Greeks began to keep their calendar by "Olympiads," the four-year spans between the celebrations of the famous games. There was a religious as well as an athletic significance to the ancient games and the shrines, temples and sacred fires within the Olympic enclosure were the scenes of worship all through the year whereas the Olympic Games, at the height of their popularity, never lasted more than five days and were held only once every four years.

The competition was entirely amateur at the start and the only prizes were laurel wreaths. Only free Greek citizens were allowed to compete and they had to undergo a strict training course that lasted ten months. But civic rivalry led to trickery and professionalism and the

games became degraded after some centuries. When Rome conquered Greece, the Roman emperors turned the Olympic Games from patriotic, religious and athletic festivals into carnivals and circuses. They dragged on malodorously until they were finally halted by decree of Emperor Theodosius I of Rome in A.D. 394.

The modern Olympic Games, which started in Athens in 1896, are the result of the devotion of a French educator, Baron Pierre de Coubertin, to the idea that, since boys and athletics have gone together down the ages, education and athletics might well go hand-in-hand toward a better international understanding. He planned a revival of the ancient Olympic Games on a world-wide basis and succeeded in getting nine nations to send athletes to the first of the modern games in 1896. Since then more than 29,000 athletes representing 58 nations have competed in the games.

Interrupted for the second time by war, the modern Olympic Games were resumed at London in 1948.

## TRACK AND FIELD—MEN

## 60-Meter Run

1900	A. E. Kraenzlein, United States.....	7s.
1904	Archie Hahn, United States.....	7s.

## 100-Meter Run

1896	T. E. Burke, United States.....	12s.
1900	F. W. Jarvis, United States.....	10.8s.
1904	Archie Hahn, United States.....	11s.
1906	Archie Hahn, United States.....	11.2s.
1908	R. E. Walker, South Africa.....	10.8s.
1912	R. C. Craig, United States.....	10.8s.
1920	C. W. Paddock, United States.....	10.8s.
1924	H. M. Abrahams, Great Britain.....	10.6s.
1928	Percy Williams, Canada.....	10.8s.
1932	Eddie Tolan, United States.....	10.3s.
1936	Jesse Owens, United States.....	10.3s.*
1948	Harrison Dillard, United States.....	10.3s.
1952	Lindy Remigino, United States.....	10.4s.

\* With the wind.

## 200-Meter Run

1900	J. W. B. Tewksbury, United States.....	22.2s.
1904	Archie Hahn, United States.....	21.6s.

1908	R. Kerr, Canada.....	22.4s.
1912	R. C. Craig, United States.....	21.7s.
1920	Allan Woodring, United States.....	22s.
1924	J. V. Scholz, United States.....	21.6s.
1928	Percy Williams, Canada.....	21.8s.
1932	Eddie Tolan, United States.....	21.2s.
1936	Jesse Owens, United States.....	20.7s.
1948	Melvin E. Patton, United States.....	21.1s.
1952	Andrew Stanfield, United States.....	20.7s.

## 400-Meter Run

1896	T. E. Burke, United States.....	54.2s.
1900	M. W. Long, United States.....	49.4.
1904	H. L. Hillman, United States.....	49.2.
1906	Paul Pilgrim, United States.....	53.2.
1908	W. Halswelle, Great Britain (walkover).....	50s.
1912	C. D. Reidpath, United States.....	48.2s.
1920	B. G. D. Rudd, South Africa.....	49.6s.
1924	E. H. Liddell, Great Britain.....	47.6s.
1928	Ray Barbuti, United States.....	47.8s.
1932	William Carr, United States.....	46.2s.
1936	Archie Williams, United States.....	46.5s.
1948	Arthur Wint, Jamaica, B.W.I.....	46.2s.
1952	George Rhoden, Jamaica, B. W. I.....	45.9s.

**800-Meter Run**

1896	E. H. Flack, Great Britain.....	2m.11s.
1900	A. E. Tysoe, Great Britain.....	2m.1.4s.
1904	J. D. Lightbody, United States.....	1m.56s.
1906	Paul Pilgrim, United States.....	2m.1.2s.
1908	M. W. Sheppard, United States.....	1m.52.8s.
1912	J. E. Meredith, United States.....	1m.51.9s.
1920	A. G. Hill, Great Britain.....	1m.53.4s.
1924	D. G. A. Lowe, Great Britain.....	1m.52.4s.
1928	D. G. A. Lowe, Great Britain.....	1m.51.8s.
1932	Thomas Hampson, Great Britain.....	1m.49.8s.
1936	John Woodruff, United States.....	1m.52.9s.
1948	Malvin Whitfield, United States.....	1m.49.2s.
1952	Malvin Whitfield, United States.....	1m.49.2s.

**1,500-Meter Run**

1896	E. H. Flack, Great Britain.....	4m.33.2s.
1900	C. Bennett, Great Britain.....	4m.6s.
1904	J. D. Lightbody, United States.....	4m.5.4s.
1906	J. D. Lightbody, United States.....	4m.12s.
1908	M. W. Sheppard, United States.....	4m.3.4s.
1912	A. N. S. Jackson, Great Britain.....	3m.56.8s.
1920	A. G. Hill, Great Britain.....	4m.1.8s.
1924	Paavo Nurmi, Finland.....	3m.53.6s.
1928	H. E. Larva, Finland.....	3m.53.2s.
1932	Luigi Beccali, Italy.....	3m.51.2s.
1936	J. E. Lovelock, New Zealand.....	3m.47.8s.
1948	Henri Eriksson, Sweden.....	3m.49.8s.
1952	Joseph Barthel, Luxembourg.....	3m.45.2s.

**5,000-Meter Run**

1912	H. Kolehmainen, Finland.....	14m.36.6s.
1920	J. Guillemot, France.....	14m.55.6s.
1924	Paavo Nurmi, Finland.....	14m.31.2s.
1928	Willie Ritola, Finland.....	14m.38s.
1932	Lauri Lehtinen, Finland.....	14m.30s.
1936	Gunnar Hockert, Finland.....	14m.22.2s.
1948	Gaston Reiff, Belgium.....	14m.17.7s.
1952	Emil Zatopek, Czechoslovakia.....	14m.6.6s.

**5-Mile Run**

1906	H. Hawtrey, Great Britain.....	26m.26.2s.
1908	E. R. Voigt, Great Britain.....	25m.11.2s.

**10,000-Meter Run**

1912	H. Kolehmainen, Finland.....	31m.20.8s.
1920	Paavo Nurmi, Finland.....	31m.45.8s.
1924	Willie Ritola, Finland.....	30m.23.2s.
1928	Paavo Nurmi, Finland.....	30m.18.8s.
1932	Janusz Kusocinski, Poland.....	30m.11.4s.
1936	Ilmari Salminen, Finland.....	30m.15.4s.
1948	Emil Zatopek, Czechoslovakia.....	29m.59.6s.
1952	Emil Zatopek, Czechoslovakia.....	29m.17s.

**Marathon**

1896	S. Loues, Greece.....	2h.55m.20s.
1900	M. Teato, France.....	2h.59m.

1952	Robert Richards, United States.....	14 ft. 11.14 in.

## Standing High Jump

1900	R. C. Ewry, United States.....	5 ft. 5 in.
1904	R. C. Ewry, United States.....	4 ft. 11 in.
1906	R. C. Ewry, United States.....	5 ft. 1½ in.
1908	R. C. Ewry, United States.....	5 ft. 2 in.
1912	Platt Adams, United States.....	5 ft. 4½ in.

## Running High Jump

1896	E. H. Clark, United States.....	5 ft. 11½ in.
1900	I. K. Baxter, United States.....	6 ft. 2½ in.
1904	S. S. Jones, United States.....	5 ft. 11 in.
1906	Con Leahy, Ireland.....	5 ft. 9½ in.
1908	H. F. Porter, United States.....	6 ft. 3 in.
1912	A. W. Richards, United States.....	6 ft. 4 in.
1920	R. W. Landon, United States.....	6 ft. 4¼ in.
1924	H. M. Osborn, United States.....	6 ft. 5½ in.
1928	Robert W. King, United States.....	6 ft. 4½ in.
1932	Duncan McNaughton, Canada.....	6 ft. 5½ in.
1936	Cornelius Johnson, United States.....	6 ft. 7½ in.
1948	John Winter, Australia.....	6 ft. 6 in.
1952	Walter Davis, United States.....	6 ft. 8.32 in.

## Standing Broad Jump

1900	R. C. Ewry, United States.....	10 ft. 6¾ in.
1904	R. C. Ewry, United States.....	11 ft. 4¾ in.
1906	R. C. Ewry, United States.....	10 ft. 10 in.
1908	R. C. Ewry, United States.....	10 ft. 11¼ in.
1912	C. Tscilifiras, Greece.....	11 ft. ¼ in.

## Running Broad Jump

1896	E. H. Clark, United States.....	20 ft. 9¾ in.
1900	A. E. Kraenzlein, United States.....	23 ft. 6¾ in.
1904	Myer Prinstein, United States.....	24 ft. 1 in.
1906	Myer Prinstein, United States.....	23 ft. 7½ in.
1908	Frank Irons, United States.....	24 ft. 6½ in.
1912	A. L. Gutterson, United States.....	24 ft. 11¼ in.
1920	Wm. Petterson, Sweden.....	23 ft. 5½ in.
1924	DeHart Hubbard, United States.....	24 ft. 5½ in.
1928	Edward B. Hamm, United States.....	25 ft. 4¾ in.
1932	Edward Gordon, United States.....	25 ft. ¾ in.
1936	Jesse Owens, United States.....	26 ft. 5½ in.
1948	Willie Steele, United States.....	25 ft. 8 in.
1952	Jerome Biffe, United States.....	24 ft. 10.03 in.

## Standing Hop, Step, and Jump

1900	R. C. Ewry, United States.....	34 ft. 8¾ in.
1904	R. C. Ewry, United States.....	34 ft. 7¼ in.

## Running Hop, Step, and Jump

1896	J. B. Connolly, United States.....	45 ft.
1900	Myer Prinstein, United States.....	47 ft. 4¼ in.
1904	Myer Prinstein, United States.....	47 ft.
1906	P. O'Connor, Ireland.....	46 ft. 2 in.
1908	T. J. Ahearne, Great Britain.....	48 ft. 11¼ in.
1912	G. Lindblom, Sweden.....	48 ft. 5½ in.
1920	V. Tuulos, Finland.....	47 ft. 6½ in.
1924	A. W. Winter, Australia.....	50 ft. 11¼ in.
1928	Mikio Oda, Japan.....	49 ft. 10¼ in.
1932	Chuhei Nambu, Japan.....	51 ft. 7 in.
1936	Naoto Tajima, Japan.....	52 ft. 5½ in.
1948	Arne Ahman, Sweden.....	50 ft. 6¼ in.
1952	Adhemar da Silva, Brazil.....	53 ft. 2.59 in.

## 16-Lb. Shot-put

1896	R. S. Garrett, United States.....	36 ft. 2 in.
1900	R. Sheldon, United States.....	46 ft. 3½ in.
1904	Ralph Rose, United States.....	48 ft. 7 in.
1906	M. J. Sheridan, United States.....	40 ft. 4½ in.
1908	Ralph Rose, United States.....	46 ft. 7½ in.
1912	P. J. McDonald, United States.....	50 ft. 4 in.
1920	V. Porhola, Finland.....	48 ft. 7½ in.
1924	Clarence Houser, United States.....	49 ft. 2½ in.
1928	John Kuck, United States.....	52 ft. 1½ in.
1932	Leo Sexton, United States.....	52 ft. 6¼ in.
1936	Hans Woeffle, Germany.....	53 ft. 1¼ in.
1948	Wilbur Thompson, United States.....	56 ft. 2 in.
1952	Parry O'Brien, United States.....	57 ft. 1.43 in.

## 16-Lb. Shot-put (Both Hands)

1951	Robert E. Richards.....	Track and field
1952	Horace Ashenfelter.....	Running

## Thorpe 'Greatest' Athlete

In 1950 the Associated Press polled the nation's sports experts on the "greats" in various fields during the past half-century. The list of winners:

Male athlete—Jim Thorpe.  
Female athlete—Mildred D. Zaharias.  
Baseball player—Babe Ruth.  
Football player—Jim Thorpe.  
Fighter—Jack Dempsey.  
Basketball player—George Mikan.  
Track performer—Jesse Owens.  
Golfer—Bobby Jones.  
Tennis player—Bill Tilden.  
Swimmer—Johnny Weissmuller.  
Race horse—Man o' War.

Greatest upset—The Boston Braves' four-straight world series victory over the Philadelphia Athletics in 1914.

Most dramatic event—Dempsey-Firpo heavyweight title fight at the Polo Grounds, New York, Sept. 14, 1923.

## U. S. PRO TENNIS CHAMPIONS

1927-30—Vincent Richards	1941—Fred Perry
1931—William T. Tilden, II	1942—Don Budge
1932—Karel Kozeluh	1943—Bruce Barnes
1933—Vincent Richards	1944—No tournament
1934—Hans Nusslein	1945—Welby Van Horn
1935—William T. Tilden, II	1946-47—Bobby Riggs
1936—Joe Whalen	1948—Jack Kramer
1937—Karel Kozeluh	1949—Bobby Riggs
1938—Fred Perry	1950-51—Francisco Segura
1939—Ellsworth Vines	1952—No tournament
1940—Don Budge	

## TRACK AND FIELD

**R**UNNING, jumping, hurdling and throwing weights—track and field sports, in other words—are as natural to boys and young men as eating, drinking and breathing. Unorganized competition in this form of sport goes back beyond the Cave Man era. Organized competition begins with the first recorded Olympic Games in Greece, 776 B. C., when Coroebus of Elis won the only event on the program, a race of approximately 200 yards. The Olympic Games, with an ever-widening program of events, continued until "the glory that was Greece" had faded and "the grandeur that was Rome" was tarnished, and finally were abolished by decree of Emperor Theodosius I of Rome in A. D. 394. The Tailteann Games of Ireland are supposed to have antedated the first Olympic Games by some centuries, but we have no records of the specific events and winners thereof.

Professional contests of speed and strength were popular at all times and in many lands, but the widespread competition of amateur athletes in track and field

sports is a comparatively modern development. The first organized amateur athletic meet of record was sponsored by the Royal Military Academy at Woolwich, England, in 1849. Oxford and Cambridge track and field rivalry began in 1864 and the English amateur championships were established in 1866. In the United States such organizations as the New York Athletic Club and the Olympic Club of San Francisco conducted track and field meets in the 1870's, and a few colleges joined to sponsor a meet in 1874. The success of the college meet led to the formation of the Intercollegiate Association of Amateur Athletes of America and the holding of an annual set of championship games beginning in 1876.

Many athletic clubs joined the National Association of Amateur Athletes of America, formed in 1879, but dissension broke up this organization and the Amateur Athletic Union, organized in 1888, has been the ruling body in American amateur athletics since that time.

## HORSE RACING

**A**NCIENT DRAWINGS on stone and bone prove that horse racing is at least 3000 years old, but Thoroughbred Racing is a modern development. Practically every thoroughbred in training today traces its registered ancestry back to one or more of three sires that arrived in England about 1728 from the Near East and became known, from the names of their owners, as the Byerly Turk, the Darley Arabian and the Godolphin Arabian. The Jockey Club (English) was founded at Newmarket in 1750 or 1751 and became the custodian of the Stud Book as well as the court of last resort in deciding turf affairs.

There was horse racing in this country before the Revolution, but the great lift to the breeding industry came with the importation in 1798, by Col. John Hoomes of Virginia, of Diomed, winner of the Epsom Derby of 1780. Diomed's lineal descendants included such famous stars of the American turf as American Eclipse and Lexington. From 1800 to the time of the Civil War there were race courses and breeding establishments plentifully scattered through Virginia, North Carolina, South Carolina, Tennessee, Kentucky and

Louisiana. In fact, thoroughbred racing was largely a Southern sport and that was one reason why the Confederacy had such excellent cavalry in the Civil War. A century ago crack horses were matched in four-mile races that were run in heats, best two out of three!

The oldest stake event in North America is the Queen's Plate, a Canadian fixture that was first run in the Province of Quebec in 1836. The oldest stake event in the United States is The Travers, which was first run at Saratoga in 1864. The gambling that goes with horse racing and trickery by jockeys, trainers, owners and track officials caused attacks on the sport by reformers and a demand among horse racing enthusiasts for an honest and effective control of some kind, but nothing of lasting value to racing came of this until the formation of The Jockey Club in 1894. The Jockey Club, composed of fifty members chosen from the aristocracy of the turf, was all-powerful in racing regulation until the State Racing Commissions came into being as a result of mutual betting and the great revenues that came with the tax on the "daily handle."

## Richards' Mount Takes Classic

Gordon Richards, England's first jockey to be knighted, in 1953 won the famous Epsom Derby for the first time in twenty-eight attempts, scoring with Sir Victor

Sassoon's Pinza. The triumph in the mile-and-a-half classic was the 4,670th for Richards, who holds the world record for riding winners. Richards rode his first winner in 1921.

### Filly Victor in Queen's Plate

Canadiana, a 3-year-old filly owned by Edward P. Taylor, won the ninety-fourth running of the Queen's Plate at Woodbine Park, Toronto, in May, of 1953. The

Queen's Plate, Canada's best-known race is the oldest stakes event in North America. It is called the King's Plate when a male occupies England's throne.

## ROWING

ROWING goes back so far in history that there is no possibility of tracing it to any particular aboriginal source. The oldest rowing race still on the calendar is the "Doggett's Coat and Badge" contest among professional watermen of the Thames (England) that began in 1715. The first Oxford-Cambridge race was held at Henley in 1829. Competitive rowing in the United States began with matches between boats rowed by professional oarsmen of the New York water front. They were oarsmen who rowed the small boats that plied as ferries from Manhattan Island to Brooklyn and return, or who rowed salesmen down the harbor to meet ships arriving from Europe. Since the first salesman to meet an incoming ship had some advantage over his rivals, there was keen competition in the bidding for fast boats and the best oarsmen. This gave rise to match races for a purse or a side bet on many occasions. The first of such races was held in June, 1811, in four-oared gigs.

Amateur boat clubs sprang up in the United States between 1820 and 1830 and

seven students of Yale joined together to purchase a four-oared lap-streak gig in 1843. The first Harvard-Yale race was held Aug. 3, 1852, on Lake Winnepesaukee, N. H. The first time an American college crew went abroad was in 1869 when Harvard challenged Oxford and was defeated on the Thames. There were early college rowing races on Lake Quinsigamond, near Worcester, Mass., and on Saratoga Lake, N. Y., but the Intercollegiate Rowing Association, in 1895, settled on the Hudson, at Poughkeepsie, as the setting for the annual "Poughkeepsie Regatta." In 1950 the I.R.A. shifted its classic to Marietta, Ohio, and in 1952 it was moved to Syracuse, N. Y. The National Association of Amateur Oarsmen, organized in 1872, has conducted annual championship regattas since that time. The first rowing races were held with lap-streak gigs but shells came into general favor about a century ago. The outrigger was invented in 1830 by Clasper, an Englishman. Yale used the sliding seat in 1870.

### Yale-Harvard Varsity Race Record

Rowed at Centre Harbor, N. H., in 1852; Springfield, Mass., in 1855, 1872-73, 1876-77; Worcester, Mass., 1859 to 1870; Saratoga Lake, N. Y., 1874-75; New London, Conn., 1878 to 1895, 1898 to 1916, 1919 to 1941, and since 1947; triangular race at Poughkeepsie, N. Y., in 1897 with Cornell victor in 20:34; Derby, Conn., in 1918, 1942, and Boston, Mass., in 1946. Course was 2 miles in 1852; 3 miles from 1855 to 1875, and 4 miles thereafter.

## BASKETBALL

**B**ASKETBALL may be unique in sports. It is one game concerning which it is safe to state when, where and how it originated. In the winter of 1891-92, Dr. James Naismith, an instructor in the Y.M.C.A. Training College (now Springfield College) at Springfield, Mass., deliberately invented the game of basketball in order to provide indoor exercise and competition for the students between the closing of the football season and the opening of the baseball season. He affixed peach baskets overhead on the walls at opposite ends of the gymnasium and, with an association (soccer) football, organized teams to play his new game in which the purpose was to toss the ball into one basket and prevent, as far as possible, the opponents from tossing the ball into the other basket. Fun-

damentally, the game is the same today, though there have been some improvements in equipment and many changes in the rules.

Because Dr. Naismith had eighteen available players when he invented the game, the first rule was: "There shall be nine players on each side." Later the number of players became optional, depending upon the size of the available court, but the five-player standard was adopted when the game spread over the country. United States soldiers introduced the game in Europe in World War I and, being taken up by foreign nations, it soon became a world-wide sport. An odd point is that, though it is still chiefly an indoor game in the United States, in other countries it flourishes almost entirely outdoors.

### National Collegiate A. A. Champions

1939—Oregon	1946—Oklahoma A & M
1940—Indiana	1947—Holy Cross
1941—Wisconsin	1948—Kentucky
1942—Stanford	1949—Kentucky
1943—Wyoming	1950—C.C.N.Y.
1944—Utah	1951—Kentucky
1945—Oklahoma A & M	1952—Kansas

### Professional Champions

The National Basketball League, formed in 1937, merged with the Basketball Association of America in the summer of 1949. Play in the B. A. A. started in 1946, with teams in ten cities. The current National Basketball Association is the result of the merger. The champions follow:

#### National League

1938—Goodyears  
1939-40—Firestones  
1941-42—Oshkosh  
1943-45—Fort Wayne  
1946—Rochester  
1947—Chicago  
1948—Minneapolis  
1949—Anderson

#### Association of America

1947—Philadelphia  
1948—Baltimore  
1949—Minneapolis

#### National Association

1950—Minneapolis  
1951—Rochester  
1952—Minneapolis

### National Invitation Champions

(Madison Square Garden Tourney)

1938—Temple	1945—DePaul
1939—Long Island U.	1946—Kentucky
1940—Colorado	1947—Utah
1941—Long Island U.	1948—St. Louis
1942—West Virginia	1949—San Francisco
1943—St. John's (Bklyn.)	1950—C.C.N.Y.
1944—St. John's (Bklyn.)	1951—Brigham Young
	1952—La Salle (Phila.)

### AMERICAN LEAGUE CHAMPIONS

1926—Cleveland Rosenblums  
1927—Brooklyn Original Celtics  
1928—Brooklyn Original Celtics  
1929—Cleveland Rosenblums  
1930—Cleveland Rosenblums  
1931—Brooklyn Visitations  
1932—No competition  
1933—No competition  
1934—Philadelphia Hebrews  
1935—Brooklyn Visitations  
1936—Philadelphia Hebrews  
1937—Philadelphia Hebrews  
1938—Jersey Reds  
1939—New York Jewels  
1940—Philadelphia Sphas  
1941—Philadelphia Sphas  
1942—Wilmington  
1943—Philadelphia Sphas  
1944—Wilmington Bombers  
1945—Philadelphia Sphas  
1946—Baltimore Bullets  
1947—Trenton Tigers  
1948—Wilkes-Barre Barons  
1949—Wilkes-Barre Barons  
1950—Scranton Miners  
1951—Scranton Miners  
1952—Wilkes-Barre Barons

### 1952-53 ALL-STAR N. B. A. SELECTIONS

**FIRST TEAM**—Bob Cousy, Boston; George Mikan, Minneapolis; Ed Macauley, Boston; Adolph Schayes, Syracuse; Neil Johnston, Philadelphia.

**SECOND TEAM**—Vern Mikkelsen, Minneapolis; Bob Wanzer, Rochester; Bob Davies, Rochester; Andy Phillip, Fort Wayne; Bill Sharman, Boston.

## BILLIARDS

APPARENTLY nobody knows where billiards originated. Some trace the game back to ancient Greece or early Egyptian days; others insist it originated in France or England in medieval times. Shakespeare must have believed the Egyptian tale, because in *Antony and Cleopatra* he has Cleopatra saying: "Let's to billiards; come, Charmian." There is an illustration of Louis XIV of France playing billiards in 1694 and using a shovel-shaped stick to set the "cue ball" in motion, from which it is evident that the pointed cue was a later development.

Certainly the game was popular in England and on the Continent in the 17th

and 18th centuries and early settlers in North America are supposed to have introduced the game here. How to apply "english" to a billiard ball was discovered by Jack Carr, an Englishman, in 1820. A Frenchman named Mingaud is credited with having invented the "draw" shot at about the same time and also to have devised leather tips for wooden cues. Championship competition, amateur and professional, is a modern development in billiards. The first formal professional tournament held in the United States took place in New York in 1863 with eight players competing. The first three-cushion tournament was held in St. Louis in 1878.

Willie Hoppe, who retired at the age of 65 in 1952, won the record number of 51 world billiard titles in a career that started when he was in his teens. Hoppe's first major victory came when he defeated

Maurice Vignaux of France for the world 18.2 championship in January, 1906. The year he retired Hoppe captured the three-cushion crown for the sixth time in succession.

Three-cushion—Ohio State

## FOOTBALL

THE PASTIME of kicking a ball around goes back beyond the limits of recorded history. Ancient savage tribes played football of a primitive kind. There was a ball-kicking game played by Athenians and Spartans and Corinthians 2500 years ago and the Greeks had a name for it: *Episkyros*. The Romans had a somewhat similar game called *Harpastum* and are supposed to have carried the game with them when they invaded the British Isles in the First century, B.C.

Undoubtedly the game known in the United States as Football traces directly to the English game of Rugby, though the modifications have been many and rather sweeping in some directions. There was informal football on our college lawns well over a century ago and an annual Freshman-Sophomore series of "scrimmages" began at Yale in 1840. But the first formal intercollegiate football game in this country was the Princeton-Rutgers contest played at New Brunswick, N. J., on Nov. 3, 1869, with Rutgers winning by 6 goals to 4. Columbia took to the intercollegiate football field in 1870 and Yale in 1872. Soon many colleges were playing football in the autumn.

In those old days games were played with twenty-five, twenty, fifteen or eleven

men on a side by mutual agreement. In 1880 there was a football convention at which Walter Camp of Yale persuaded the delegates to agree to a rule calling for eleven players on a side. In 1882 there was adopted the rule requiring the offensive team to make 5 yards in three downs or surrender the ball to its opponents. The game grew so rough that it was attacked as brutal by many critics and some colleges abandoned the sport. Conditions were so bad in 1906 that President Theodore Roosevelt, an enthusiast for all sports, called a meeting of Yale, Harvard and Princeton representatives at the White House in the hope of reforming and improving the game. The outcome was that the game, with the forward pass introduced and some other modifications of the rules inserted, became faster and cleaner and gradually grew to the tremendous popularity it enjoys today.

Professional football, now firmly established, is an outgrowth of intercollegiate football. The first professional game was played in 1895 at Latrobe, Pa. The National Football League was founded in 1921. The All-America Conference went into action in 1946. At the end of the 1949 season the two major play-for-pay circuits merged, retaining the name of the older league.

 ORANGE—Alabama 61, Syracuse 6

#### Yale, Penn All-Time Leaders

Through 1952, Yale and Pennsylvania

were the only colleges to win more than 500 football games since the sport received its start in this country. Yale's all-time record for eighty years showed 534 victories, 130 defeats and 43 ties. Pennsylvania is credited with 521 victories, 203 defeats and 35 ties.

### World Champions

1951-58	Adolf Anderssen, Breslau, Germany
1858-62	Paul Morphy, New Orleans, La.
1862-66	Adolf Anderssen, Breslau, Germany
1866-94	William Steinitz, Vienna, Austria
1894-1921	Emanuel Lasker, Berlin, Germany
1921-27	Jose R. Capablanca, Havana, Cuba
1927-35	Alexander A. Alekhine, Moscow, Russia
1935-37	Dr. Max Euwe, Amsterdam, the Netherlands
1937-46	Alexander A. Alekhine, Moscow, Russia*
1946-	Mikhail Botvinnik, Leningrad, Russia

\* Alekhine, a French citizen, died on March 23, 1946, having the world championship vacant.

### United States Champions

1852-62	Paul Morphy, New Orleans, La.
1871-87	George H. Mackenzie, New York
1887-92	Max Judd, St. Louis, Mo.
1892-94	Simon Lipschuetz, New York
1894	Jackson W. Showalter, Georgetown, Ky.
1894	Albert B. Hodges, Staten Island, N. Y.*
1894-97	Jackson W. Showalter, Georgetown, Ky.
1897-1906	Harry Nelson Pillsbury, Boston, Mass.
1906-09	Jackson W. Showalter, Georgetown, Ky.
1909-36	Frank J. Marshall, New York
1936-44	Samuel Reshevsky, New York†
1944-46	Arnold S. Denker, New York
1946	Samuel Reshevsky, Boston
1948	Herman Steiner, Los Angeles
1951	Larry Evans, New York

\* Retired after winning return match with Showalter.  
† In 1942, Isaac I. Kashdan, of New York was co-champion for a while because of a tie with Reshevsky in that year's tournament. Reshevsky won the play-off.

Brandywine Dee, a liver and white pointer owned by the du Pont plantation of Guerrytown, Ala., captured the 1953 national shooting dog championship at Union Springs, Ala.

## AUTO RACING

THE FIRST automobiles on the road were Terratic in action and driving them or even riding in them was considered a trifle risky, hence it became the sporting thing to do. Experimental excursions in crude cars gave rise to rivalry in speed over the rough roads of the Gay Nineties and this eventually led to formal contests, the first of which was a road race from Paris to Rouen in 1894, with 26 cars showing up at the starting line. Formal competition in the United States started with a road race in the Chicago district on Thanksgiving Day, 1895, and the winner, J. F. Duryea, covered the road distance of 54.36 miles at the astonishing average of 7.5 miles per hour!

Around 1900 Paris became the hub of road racing in Europe and each year there were raucous, dusty and dangerous races from Paris to Berlin, to Vienna, to Madrid

and other cities on the Continent. Accidents were so numerous to drivers and spectators that, after a gory group of mishaps in the forepart of the Paris-Madrid race of 1903, the contest was halted at Bordeaux by public authorities and all road racing was brought under control. Other kinds of auto racing were exposed to view. Some contests, including 24-hour races for stock models, were held on circular or oval tracks originally built for horse racing. Finally came the special racing strips for autos, including such famous autodromes as Brooklands in England and the Indianapolis Speedway in the United States.

As a test of engine and chassis under severe conditions and great strain, auto racing rendered invaluable assistance in the development of the motor car of today.

1922 Jimmy Murphy		

### History of the One-Mile Speed Mark

The first recorded effort for one mile was made in 1898 by Chasseloup-Laubat, driving a Jentaud, in France. His average was 39.23 m.p.h. This was increased to 65.79 in 1899 by Jenatzky, also in France. The first man to travel better than 100 m.p.h. was Rigolly, in 1904, at 103.56 m.p.h., followed by Baras, with 104.53 in the same year. The first over 200 m.p.h. was Major H. O. D. Segrave, who drove at 203.790 in 1927 at Daytona, Florida.

In 1947 John Cobb of London became the first person to travel more than 400 m.p.h. on land. The Englishman accomplished the

feat on Sept. 16 at Bonneville, Utah, while raising the world mile record to 394.196 m.p.h. and the world kilometer (.62137 of a mile) mark to 393.825 m.p.h.

Cobb's fastest mile was covered in 8.93 seconds and his average speed was 9.1325 seconds. The Briton drove at the rate of 385.645 m.p.h. for the mile and 388.019 for the kilometer on the southward run, then increased his pace to 403.135 m.p.h. and 399.808, respectively, on the northward sprint, the best times ever recorded.

Those who drove 300 m.p.h. or better follow (all at Bonneville):

Date	Driver	Car	Average
Sept. 3, 1935	Sir Malcolm Campbell	Bluebird Special	301.1292
Nov. 19, 1937	Capt. G. E. T. Eyston	Thunderbolt #1	311.42
Aug. 27, 1938	Capt. G. E. T. Eyston	Thunderbolt #1	345.5
Sept. 15, 1938	John Cobb	Railton	350.2
Sept. 16, 1938	Capt. G. E. T. Eyston	Thunderbolt #1	357.5
Aug. 23, 1939	John Cobb	Railton Red Lion	368.9
Sept. 16, 1947	John Cobb	Railton Mobil Special	394.196

### Le Mans Race to British Pair

One of the most rugged endurance tests is the Le Mans (France) twenty-four-hour auto race. In 1953 the British was won by

the British team of Tony Rolt and Duncan Hamilton, who set records in a Jaguar by covering 303 laps totaling 2,533 miles and averaging 106 miles per hour

## 1953 All-American Selections

FIRST TEAM—Goalie: John Johnson (Army); Defense: William Shoop (R. P. I.), David Tait (Princeton), H. Edwin Semler (Johns Hopkins); Midfield: Donovan Kniss (Navy), Richard Young (Drexel), Thomas Compton (Virginia); Attack: Ralph Willis (Princeton), Emil Budnitz (Johns Hopkins), Avery Blake Jr. (Swarthmore).

SECOND TEAM—Goalie: G. P. Moore (Virginia); Defense: Robert Morgan (Maryland), Walter Hubbell (Navy), John Devries (Virginia); Midfield: Thomas Wagner (Loyola), John Grim (Washington College), Bruce Yancey (Syracuse); Attack: Gene Agerton (Virginia), Peter Leone (Army), Rennie Smith (Maryland).

## WOMEN'S LACROSSE

## 1953 All-American Selections

FIRST TEAM—First Home: \* Betty Richey; Second Home: Betty Shellenberger; Third Home: Mildred Barnes; Left Attack Wing: Nancy Vagner; Right Attack Wing: Betty White; Center: Betty Nawrath; Left Defense Wing: June Biedler; Right Defense Wing: Clorinda Saragosa; Third Man: Dorothy Moffett; Cover Point: Mary Fetter; Point: Gayle Meacham; Goal: Roberta Brennan.

RESERVES—First Home: Margot Cunningham; Second Home: Helen Allen; Third Home: Catherine Christie; Left Attack Wing: Mary Hill; Right Attack Wing: Anne Delano; Center: Pat Magee; Left Defense Wing: Cynthia McKelvey; Right Defense Wing: Marion Phillips; Third Man: Barbara Hall; Cover Point: Helena Wheeler; Point: Eugenia Slaymaker; Goal: Keturah Cox.

\* Twenty-first year as first-team selection.

Johnny O'Brien of Seattle University set a major-college scoring record by notching 884 points during the 1952-53 season. The previous mark of 795 was made by Clyde Lovellette of Kansas in 1951-52. O'Brien, who also holds the small-college single-season record of 970, finished his collegiate basketball career with a total of 2,537 points, another record.

## LAWN TENNIS

**LAWN TENNIS** is a comparatively modern modification of the ancient game of court tennis. Major Walter Clopton Wingfield thought that something like court tennis might be played outdoors on lawns and in December, 1873, at Nantclwyd, Wales, he introduced his new game under the name of *Sphairistike* at a lawn party. The game was a success and spread rapidly, but the name was a total failure and almost immediately disappeared when all the players and spectators began to refer to the new game as "lawn tennis." In the early part of 1874 a young lady named Mary Ewing Outerbridge returned from Bermuda to New York, bringing with her the implements and necessary equipment of the new game that she had obtained from a British Army supply store in Bermuda. Miss Outerbridge and friends played the first game of lawn tennis in the United States on the grounds of the Staten Island

Cricket and Baseball Club in the spring of 1874.

For a few years the new game went along in haphazard fashion under varying rules. Tennis balls were of no standard size or texture. The nets were set at different heights up to 5 feet on the side and 4 feet in the middle. Some courts were marked out in hour-glass shape, narrow in the middle and wide at both ends. But about 1880 standard measurements for the court and standard equipment within definite limits became the rule. In 1881 the United States Lawn Tennis Association was formed and conducted the first national championship at Newport, R. I. The international matches for the Davis Cup began with a series between the British and United States players on the courts of the Longwood Cricket Club, Chestnut Hill, Mass., in 1900, with the home players winning.

## Marathon Tennis Match

A highlight of the 1953 All-England tennis championships at Wimbledon was the 93-set battle between Jaroslav Drobný, Czech exile, and Budge Patty of Los Angeles, Calif. Drobný won the four-hour third-round match by 8-6, 16-18, 3-6, 8-6, 12-10. It was the longest singles contest in modern Wimbledon history.

1952	Ch. Rancho Doba's Storm.	Doberman pinscher.	Mr. and Mrs. Len Carey

ICE HOCKEY

ICE HOCKEY, by birth and upbringing a Canadian game, is an offshoot of field hockey. Some historians state that the first ice hockey game was played in Montreal in December, 1879, between two teams composed almost exclusively of McGill University students, but others assert that Kingston, Ont., or Halifax, N. S., were scenes of earlier hockey games. In the Montreal game of 1879 there were fifteen players on a side and they used an assortment of crude sticks to keep the puck in motion. Early rules allowed nine men on a side but the number was reduced to seven in 1886 and finally reduced to six, the standard of today.

The first governing body of the sport was the Amateur Hockey Association of Canada, organized in 1887. In the winter of 1894-95 a group of college students from the United States visited Canada, saw hockey played, became enthused over the game and introduced it as a winter sport when they returned home. This was the

start of hockey in the United States. The first professional league was the International Hockey League that operated, strangely enough, not in Canada but in northern Michigan in 1904-06 and included as players such famous stars as Cyclone Taylor and Hod Stuart, later included in the Hockey Hall of Fame.

Until 1910, professionals and amateurs were allowed to play together on "mixed teams," but this arrangement ended with the formation of the first "big league," the National Hockey Association, in eastern Canada in 1910. The Pacific Coast League, to provide professional hockey in the West, was organized in 1911 with Seattle (and later other American cities) included in the circuit. The National Hockey League replaced the National Hockey Association in 1917. Boston, in 1924, was the first American city to join that circuit. The Stanley Cup, top trophy of hockey, was competed for by "mixed teams" from 1894 to 1910, thereafter by professionals.

\* March.  
† The Montreal Canadiens and Seattle, P.C.H.L. champions, had played five games at Seattle, Wash., when an influenza epidemic (which took the life of Joe Hall of the Canadiens) caused the Department of Health to stop the series. Each team won two games, with one contest ending in a tie.

## Mexico Takes Tuna Competition

A 723-pounder boated by Dr. Rodolfo Arju in the final hours on Sept. 12, 1953, enabled the Mexican team to capture the tenth annual international tuna tournament for the Alton B. Sharp Trophy off Wedgeport, Nova Scotia. The fish was the largest of the four caught during the event and gave Mexico 1,239 points. Argentina was second with 608, while Cuba had 501 and the Netherlands 480. The United States, the British Commonwealth, France, Chile, Venezuela and Brazil were blanked. The scarcity of fish was attributed to a hurricane that swept the Nova Scotia coast just before the tournament.

(At Ottawa, Feb. 28-28)

Men—Peter Firstbrook, Toronto S. C.  
 Women—Barbara Gratton, Toronto S. C.  
 Pairs—Frances Dafoe-Norris Bowden, Toronto S. C.  
 Dance—Frances Abbott-David Ross, Winnipeg W. C.

BOWLING

THE GAME OF bowling that is the favorite sport of millions of "keglers" in the United States is an indoor development of the more ancient outdoor game that survives as lawn bowling. The outdoor game is prehistoric in origin and probably goes back to Primitive Man and round stones that were rolled at some target. It is believed that a game something like nine-pins was popular among the Dutch, Swiss and Germans as long ago as A.D. 1200 at which time the game was played outdoors with an alley consisting of a single plank 12 to 18 inches wide along which was rolled a ball toward three rows of three pins each placed at the far end of the alley. When the first indoor alleys were built and how the game was modified from time to time are matters of dispute. Much of the confusion arises from a lack of certainty as to which game is meant, "bowls" or "bowling", one with a "jack" and the other with "pins", in historical passages.

It is supposed that the early settlers of New Amsterdam (New York City) being Dutch, they brought their two bowling games with them. About a century ago the game of nine-pins was flourishing in the United States but so corrupted by gambling on matches that it was barred by law in New York and Connecticut. Since the law specifically barred "nine-pins", it was eventually evaded by adding another pin and thus legally making it a new game. The genius who thought up that simple method of outwitting the law and putting a popular game in motion once more remained modestly anonymous. With the increase in the number of pins, the old diamond formation of nine-pins was abandoned for the triangle set-up of ten-pins that remains the rule to this day. Various organizations were formed to make rules for bowling and supervise competition in the United States but none was successful until the American Bowling Congress, organized Sept. 9, 1895, became the ruling body.

 Women's Alpine combined (closed)—Katy Rodolph  
 Women's giant slalom—Mrs. Andrea Mead Lawrence

## SWIMMING

THERE IS THE ancient tale of Leander of Abydos swimming the Hellespont mightily to call on Helen of Sestos but nobody kept the time on his trips. However, Lord Byron swam one leg of the old Leander course, Sestos to Abydos, on May 3, 1810, in 1 hour 10 minutes. The famous British poet was a noted swimmer and once, in an endurance trial at Venice, was in the water for 4 hours 10 minutes. Distance swimming was the early type of competition. Captain Matthew Webb achieved fame by being the first to swim the English Channel—Dover to Calais—in August, 1875, in 21 hours 45 minutes. Many other swimmers, men and women, have conquered the

Channel since that time. Gertrude Ederle, of New York City, was the first woman to accomplish the feat. Miss Ederle swam the Channel Aug. 6, 1926, in 14 hours 34 minutes, breaking the existing record at that time. Since then the record has been lowered by a number of men and women.

Regular competition at short as well as long distances and indoor as well as outdoor came with the development of such organizations as the Amateur Athletic Union and the building of indoor and outdoor swimming pools. Swimming has been on the Olympic program since the start of the modern Olympic Games at Athens in 1896.

**ROLLER DERBY****1953 WORLD SERIES**

(At Teaneck, N. J., Armory, May 6-10)

May 6—New York 36, Brooklyn 34; Jersey 42, Chicago 27.	
May 8—Chicago 51, Brooklyn 36; New York 24, Jersey 23.	
May 9—Jersey 46, Brooklyn 34; New York 45, Chicago 43.	
May 10 (final)—Jersey 35, New York 32.	

**1952-53 REGULAR SEASON STANDING**

	Won	Lost
New Jersey Jolters.....	80	51
Chicago Westerners.....	88	73
New York Chiefs.....	63	69
Brooklyn Red Devils.....	54	91

Westerners' total exceeds that of the other teams because contests with the Panjets, who dropped out of the league, were counted in the final standing.

## MOTORBOATING

SINCE the source of power—the internal combustion engine—is the same in the motorboat as it is in the automobile, the history of motorboat racing parallels that of auto racing. There was a sporting risk in driving the early power boats. As soon as they began to show a degree of dependability, there came the informal rivalries of the rivers and lakes. These led to the formal contests of speed and endurance

over marked courses under the control of the American Power Boat Association. The races were severe tests of all parts of power boats and what was learned in the annual Gold Cup competition, which started in 1904, caused a great improvement in the designing of engines and hulls. The development of the outboard motor opened up another branch of power boat competition of wide popularity.

## Motorboating Statistics

Source: American Power Boat Association and Motor Boating Magazine.

### GOLD CUP WINNERS

Beginning with 1922 the race for the American Power Boat Association Gold Cup was open only to displacement boats of over 25 feet in length and powered with motors of not more than 625 inches piston displacement. In 1946 the rules were liberalized to encourage the entry of smaller, less expensive craft. Boats now are required to be between 10 and 40 feet in length, with horsepower unlimited.

\* In statute miles per hour.

† First of hydroplanes to win, predecessors being all displacement craft.

\* My *Scout*, piloted by Bill Cantrell, won the first heat in 11 minutes 27 4/10 seconds. The water was too rough for the second and third heats.

## POLO

POLO originated "somewhere east of Suez" but exactly where never has been determined. There is pictorial proof that it was played many centuries ago in Persia, Japan, China and Tibet, but it reached England by way of a border tribe in India known as the Manipuri. British army officers in India, about 1860, found the Manipuri playing polo and learned the game from them. The fact that the Manipuri used small native horses—they had no others—was the reason for the early height limit (14 hands) on polo mounts, from which arose the custom of calling them "polo ponies," which was abandoned in 1919.

In 1869 some officers of the 10th Hussars, returning from India, introduced the game in England and informal games were played with as many as eight players on a side. Formal competition at Hurlingham, the great shrine of the game, began in 1876 with five players on a side, which

number was cut to four in 1882. In 1884 an outstanding English player by the name of John Watson invented the backhand stroke and much improved the tactics of the game.

James Gordon Bennett, Jr., noted American newspaper owner and editor, saw polo at Hurlingham in 1875, brought the implements to this country, had a carload of cow ponies sent up from Texas and promoted a game that was played indoors at the Dickel Riding Academy at Fifth Avenue and 39th Street, New York City, in 1876. Polo moved outdoors to the Jerome Park race course and other suitable places soon after. One field on which it was played, at Fifth Avenue and 110th Street, was taken over by the New York baseball team in the National League and that is why the field on which the "Giants" play ball, although there since have been two changes in site, still is called "the Polo Grounds."

Hardress Lloyd.   | 1914 | Won by Great Britain (8½-3, 4-2¾) at Meadow Brook. Great Britain: No. 1, Capt. H. A. Tomkinson; No. 2, Capt. Leslie St. G. Cheape; No. 3, Maj. F. W. Barrett; Back, Capt. Vivian N. Lockett. United States: No. 1, Rene LaMontagne; No. 2, J. M. Waterbury, Jr.; No. 3, Devereux  |

- Milburn and Lawrence Waterbury; Back, Lawrence Waterbury and Devereux Milburn.
- 1921 Won by United States (11-4, 10-6) at Hurlingham. United States: No. 1, Louis E. Stoddard; No. 2, Thomas Hitchcock, Jr.; No. 3, J. Watson Webb; Back, Devereux Milburn. Great Britain: No. 1, Lt. Col. H. A. Tomkinson; No. 2, Maj. F. W. Barrett; No. 3, Lord Wodehouse; Back, Maj. Vivian N. Lockett.
- 1924 Won by United States (16-5, 14-5) at Meadow Brook. United States: No. 1, J. Watson Webb; No. 2, Thomas Hitchcock, Jr.; No. 3, Malcolm Stevenson and Robert E. Strawbridge Jr.; Back, Devereux Milburn. Great Britain: No. 1, Maj. T. W. Kirkwood and Lt. Col. T. P. Melvill; No. 2, Maj. F. W. Hurndall and Maj. G. H. Phipps-Hornby; No. 3, Maj. E. G. Atkinson; Back, Lewis L. Lacey.
- 1927 Won by United States (13-3, 8-5) at Meadow Brook. United States: No. 1, J. Watson Webb; No. 2, Thomas Hitchcock, Jr.; No. 3, Malcolm Stevenson; Back, Devereux Milburn. Great Britain: No. 1, Capt. Claude E. Pert and Capt. R. George; No. 2, Maj. Austin H. Williams and Capt. J. P. Dening; No. 3, Capt. C. T. I. Roark; Back, Maj. E. G. Atkinson.
- 1930 Won by United States (10-5, 14-9) at Meadow Brook. United States: No. 1, Eric Pedley; No. 2, Earle A. S. Hopping; No. 3, Thomas Hitchcock, Jr.; Back, Winston F. C. Guest. Great Britain: No. 1, Gerald Balding; No. 2, Lewis L. Lacey; No. 3, Capt. C. T. I. Roark; Back, Humphrey P. Guinness.
- 1936 Won by United States (10-9, 8-6) at Hurlingham. United States: No. 1, Eric Pedley; No. 2, Michael G. Phipps; No. 3, Stewart B. Iglehart; Back, Winston F. C. Guest. Great Britain: No. 1, Hesketh H. Hughes; No. 2, Gerald Balding; No. 3, Eric H. Tyrrell-Martin; Back, Humphrey P. Guinness.
- 1939 Won by United States (11-7, 9-4) at Meadow Brook. United States: No. 1, Michael G. Phipps; No. 2, Thomas Hitchcock, Jr.; No. 3, Stewart B. Iglehart; Back, Winston F. C. Guest. Great Britain: No. 1, Robert Skene; No. 2, Aidan Roark; No. 3, Gerald Balding; Back, Eric H. Tyrrell-Martin.
- ### Argentina vs. United States
- 1928 Won by United States (7-6, 7-10, 13-7) at Meadow Brook. United States: No. 1, W. A. Harriman; No. 2, Thomas Hitchcock, Jr.; and E. A. S. Hopping; No. 3, Malcolm Stevenson and Thomas Hitchcock, Jr.; Back, Winston F. C. Guest. Argentina: No. 1, Arturo Kenny; No. 2, J. D. Nelson; No. 3, J. B. Miles; Back, Lewis L. Lacey.
- 1936 Won by Argentina (21-9, 8-4) at Meadow Brook. Argentina: No. 1, Luis Duggan; No. 2, Roberto Cavanagh; No. 3, Andres Gazzotti; Back, Manuel Andrada. United States: No. 1, G. H. Bostwick; No. 2, Gerald Balding; No. 3, Thomas Hitchcock, Jr.; Back, John Hay Whitney.
- 1950 Won by Argentina (14-10, 11-7) at Buenos Aires. Argentina: No. 1, Juan Cavanagh; No. 2, Roberto Cavanagh; No. 3, Enrique Alberdi; Back, Juan Carlos Alberdi. United States: No. 1, Delmar Carroll; No. 2, Peter Perkins; No. 3, George K. Oliver; Back, Lewis Smith.

### "Ashes" Return to England

For the first time since 1933, England gained possession of "The Ashes," the world series of cricket, on Aug. 19, 1953, by defeating Australia. The opening four test matches ended in draws after five days of play each. The fifth and deciding match at Kennington Oval, England, lasted four days. The Australians scored 275 runs in their first innings and 162 in their second. England retaliated with 306 in its first innings and the first four batters in the second accounted for the 132 necessary to gain the laurels. Len Hutton was the captain of the victorious side.

### Bobsled Champion Dies

Tragedy marked the 1953 world bobsled championships at Garmisch-Partenkirchen, Germany. Felix Endrich, 32, of Zurich, Switzerland, who earlier had won the two-man title, was killed in a crash of his four-man sled in a trial run. The sled skidded over the high wall of the Bavarian curve, sailed nearly 40 feet through the air and then smashed into a tree.

# NATIONAL OPEN POLO CHAMPIONS

Not held from 1905 to 1909, inclusive; 1911, 1916, 1917, 1918, and from 1942 to 1945, inclusive.

## 1904—WANDERERS

- Back—Bob Uihlein

## 1952—BEVERLY HILLS

- 1—Bob Fletcher
- 2—Tony Veen
- 3—Bob Skene
- Back—Carlton Beal

## Big Inning

On June 18, 1953, the Red Sox scored 17 runs in the seventh inning against the Detroit Tigers at Boston, thereby setting seven modern major league baseball records. The final score was 23 to 3. Four Red Sox players, Sammy White, Gene Stephens, George Kell and Tom Umphlett, made three singles apiece in the big inning to tie the record set by Marty Collins of the Chicago Cubs in 1922 and equaled by Ted Williams of the Red Sox in 1948.

## Throwing Mark Held by Grate

When Don Grate, an outfielder with Chattanooga of the Southern Association threw a baseball 434 feet 1 inch on Sept. 7, 1952, he broke a record that had been in the books for 42 years. The previous mark of 426 feet 9½ inches was made by Sheldon Lejeune in 1910. Grate increased his record to 443 feet 3½ inches at Chattanooga in 1953.

## YACHTING

**J**ASON sailed in search of the Golden Fleece. Cleopatra (according to Shakespeare) had a royal barge with purple sails. Columbus had three sailing ships when he crossed the Atlantic westward in 1492. But who the first sailor was and where he launched his primitive craft nobody ever will know. The word "yacht" is of Dutch origin and the first "yacht race" of record in the English language was a sailing contest from Greenwich to Gravesend and return in 1662 between a Dutch yacht and an English yacht designed and, at some part of the race, sailed by Charles II of England. The royal yacht won the contest.

The first yacht club was organized at Cork, Ireland, in 1720 under the name of the Cork Harbour Water Club, later changed to the Royal Cork Yacht Club. The Royal Yacht Squadron was organized

at Cowes in 1812 and the name changed to the Royal Yacht Club in 1820. The New York Yacht Club was organized aboard the Stevens schooner "Gimcrack" on July 30, 1844, and a clubhouse erected at Elysian Fields, Hoboken, N. J., the following year.

From that time until the Civil War races were held over courses starting from the water off the yacht club promontory. One course was to the Sandy Hook Lightship and return.

In 1850 the celebrated "America" was built by a group of New York yachtsmen and sent abroad to compete at Cowes. In a race around the Isle of Wight, with a special cup as a prize, the "America" defeated fourteen English boats and brought back the trophy that has been raced for as "the America's Cup" in many international yacht races since that time.

\* Indicates skipper's series in which the contestants drew for local boats each day and brought their own sails.

## Best Marathon Time

Jim Peters of Great Britain was clocked in the fastest time ever recorded for the marathon distance on June 13, 1953. His time for the 26 miles 385 yards from Windsor to Dhiswick, England, was 2 hours 18 minutes 40.2 seconds and was 10.8 sec-

onds faster than the best previous performance, by Keizo Yamada in the Boston Marathon in April, 1953. It was 4 minute 23 seconds better than Czech Emil Zatopek registered in the 1952 Olympics at Helsinki, Finland.

## HARNESS RACING

**O**LIVER WENDELL HOLMES, the famous Autocrat of the Breakfast Table, wrote that the running horse was a gambling toy but the trotting horse was useful and, furthermore, "horse-racing is not a republican institution; horse-trotting is." Oliver Wendell Holmes was a born and bred New Englander and New England was the nursery of the harness racing sport in America. Pacers and trotters were matters of local pride and prejudice in Colonial New England and, shortly after the Revolution, the Messenger and Justin Morgan strains produced many winners in harness racing "matches" along the turnpikes of New York, Connecticut, Rhode Island, Massachusetts, Vermont and New Hampshire.

There was English thoroughbred blood in Messenger and Justin Morgan and, many years later, it was blended in Rysdyk's

Hambletonian, foaled in 1849. Hambletonian was not particularly fast under harness but his descendants have had almost a monopoly of prizes, titles and records in the harness racing game. Hambletonian was purchased as a foal with its dam for a total of \$124 by William Rysdyk of Goshen, N. Y. and made a modest fortune for the purchaser.

Trotters and pacers often were raced under saddle in the old days and, in fact, the custom still survives in some places in Europe. Dexter, the great trotter that lowered the mile record from 2:19 $\frac{3}{4}$  to 2:17 $\frac{1}{4}$  in 1887, was said to handle just as well under saddle as when pulling a sulky. But as sulkies were lightened in weight and improved in design, trotting under saddle became less common and finally faded out in this country.

### Hambletonian Winners

Goshen, N. Y.

(Three-year-old trotters—1 mile)

Run at Syracuse, N. Y., in 1926 and 1928; run at Lexington, Ky., in 1927 and 1929; run at Empire City Race Track, Yonkers, N. Y., in 1943.

Year	Winner	Driver	Best time	Value
1926	Guy McKinney	Nat Ray	2.04 3/4	\$73,451.32
1927	Iosola's Worthy	Marvin Childs	2.03 3/4	54,694.44
1928	Spencer	W. H. Leese	2.02 1/2	66,226.25
1929	Walter Dear	W. R. Cox	2.02 3/4	60,309.60
1930	Hanover's Bertha	Tom Berry	2.03	56,859.84
1931	Calumet Butler	R. McMahon	2.03 1/4	50,921.35
1932	The Marchioness	W. Caton	2.01 1/4	49,489.26
1933	Mary Reynolds	Ben White	2.03 3/4	40,459.88
1934	Lord Jim	H. M. Parshall	2.02 3/4	25,845.44
1935	Greyhound	Sep Palin	2.02 1/4	33,321.00

## Standard Measurements in Sports

### BASEBALL

- Home plate to pitcher's box—60 feet 6 inches.
- Plate to second base—127 feet 3 $\frac{3}{4}$  inches.
- Distance from base to base (home plate included)—90 feet.
- Size of bases—15 inches by 15 inches.
- Pitcher's plate—24 inches by 6 inches.
- Batter's box—6 feet by 4 feet.
- Home plate—17 inches by 17 inches, cut to a point at rear.
- Home plate to backstop—Not less than 60 feet.
- Weight of ball—Not less than 5 ounces nor more than 5 $\frac{1}{4}$  ounces.
- Circumference of ball—Not less than 9 inches nor more than 9 $\frac{1}{4}$  inches.
- Bat—Must be round, not over 2 $\frac{3}{4}$  inches in diameter at thickest part, nor more than 42 inches in length, and entirely of hardwood in one piece.

### FOOTBALL

- \* Length of field—120 yards.
- Width of field—53 $\frac{1}{3}$  yards (160 feet).
- Height of goal posts—20 feet.
- Height of crossbar—10 feet.
- Width of goal posts—18 feet 6 inches, inside to inside, and not more than 19 feet 2 inches, outside to outside.
- Length of ball—11 $\frac{1}{4}$  inches (long axis).
- Circumference of ball—21.5 inches (middle); 28.5 inches (long axis).

\* Includes 10 yards of end zone on either side.

### LAWN TENNIS

- Size of court—Rectangle 78 feet long and 27 feet wide (singles); 78 feet long and 36 feet wide (doubles).
- Height of net—3 feet in center, gradually rising to reach 3-foot 6-inch posts at each side of court.
- Ball—Shall be more than 2 $\frac{1}{2}$  inches and less than 2 $\frac{5}{8}$  inches in diameter and weigh more than 2 ounces and less than 2 $\frac{1}{2}$  ounces.
- Service line—21 feet from net.

### POLO

- Playing Field—300 yards long by 200 yards wide, if unboarded; 300 by 160, if boarded. In addition, there is an area of about 10 yards from the sidelines and about 30 yards from the back lines known as the safety zone.
- Goals—8 yards wide and at least 10 feet high. The posts must be light enough to break if collided with.
- Ball—Should not exceed 3 $\frac{1}{4}$  inches in diameter and should weigh from 4 $\frac{1}{4}$  to 4 $\frac{3}{4}$  ounces. Usually made of wood, but experiments have been made with plastic balls.
- Ponies—No restrictions on height of mounts.

### GOLF

- Weight of ball—Not greater than 1.620 ounces.
- Size of ball—Not less than 1.680 inches in diameter.
- Velocity of ball—Not greater than 250 feet per second.
- Hole—Shall be 4 $\frac{1}{4}$  inches in diameter and at least 4 inches deep.
- Clubs—No restrictions on the size; 14 is the maximum number permitted in championship competition.

### ICE HOCKEY

- Size of rink—200 feet long by 85 feet wide (desired size).
- Size of goal—6 feet wide by 4 feet in height.
- Puck—1 inch thick and 3 inches in diameter; made of vulcanized rubber; weight—6 $\frac{1}{4}$  ounces (unofficial).
- Length of stick—Not more than 53 inches from heel to end of shaft nor 14 $\frac{3}{4}$  inches from heel to end of blade. Blade should not exceed 3 inches in height, except goalkeeper's stick, which shall not exceed 3 $\frac{1}{2}$  inches in height except at the heel, where it must not exceed 4 $\frac{1}{2}$  inches.

### BASKETBALL

#### (National Collegiate A. A. Rules)

- Playing court—94 feet long by 50 feet wide (maximum dimensions); 74 feet long by 42 feet wide (minimum dimensions).
- Baskets—Rings 18 inches in inside diameter, with white cord nets, 15 to 18 inches in length. Each ring is made of metal and is not more than  $\frac{5}{8}$  of an inch in diameter.
- Height of basket ring—10 feet.
- Weight of ball—Not less than 20 ounces nor more than 22.
- Circumference of ball—No greater than 30 inches and not less than 29 $\frac{1}{2}$ .
- Free-throw line—15 feet from the face of the backboard.

### BOXING

- Size of ring—The matches take place in an area, not less than 18 nor more than 20 feet square. It is enclosed by three 1-inch covered ropes. The floor has a 2-inch padding that extends at least 6 inches beyond the roped area in the case of elevated rings and 3 feet if the ring is at floor level.
- Gloves—In professional fights, 8-ounce gloves generally are used, except in title contests, where 6-ounce gloves are the custom. The A.A.U. requires 8-ounce gloves up to the welterweight class and 10-ounce for the heavier divisions. College rules call for a minimum of 12 ounces.

 5 miles—Roy Stetina, Euclid, Ohio  
 25 miles—Tom O'Rourke, Detroit  
 Junior open—Jack Hartman, Los Gatos, Calif.  
 Girls' open—Nancy Nieman, Detroit

## Bobet Tour de France Victor

Louison Bobet, 28-year-old Frenchman, won the fiftieth anniversary tour de France, bicycle racing's outstanding event, in 1953. Bobet had a 14-minute advantage over the runner-up, Jean Mallejac, also of France, in the 2,782.8-mile grind which was raced in 22 stages (days).

To celebrate the fiftieth anniversary of the "Tour," France issued a commemorative 12-franc (red, blue and black) postage stamp, with cyclists of 1903 and 1953 pictured against a map tracing the route of what the French call "the most important sports event in the world."

The leading finishers:

	h. m. s.
1. Louison Bobet, France.....	129:23:25
2. Jean Mallejac, France.....	129:37:43
3. Glancarlo Astrua, Italy.....	129:38:36
4. Alec Close, Belgium.....	129:41:00
5. Woutje Wagtmans, Holland.....	129:41:30
6. Fritz Schaefer, Switzerland.....	129:42:09
7. Antonin Rolland, France.....	129:46:38
8. Nello Lauredi, France.....	129:49:28
9. Roger Geminiani, France.....	129:50:43
10. Francois Mahe, France.....	129:51:51

Team champion—Holland.

## WEIGHT LIFTING

## World Championships

(At Stockholm, Sweden, Aug. 26-30)

	Pounds

## United States Wins Rifle Matches

The United States won the Dewar Match and Pershing Trophy team rifle-shooting competitions in 1953. Both contests were with Great Britain and Canada. The U. S. 20-man squad established a record of 7,984 points out of a possible 8,000 in winning the Dewar Match. A 10-man unit from the U. S. won the Pershing event with 3,990 points.

In the Dewar competition, each country fires on its home grounds. The scores are sent to England and tabulated by the British Small Bore Rifle Association, sponsors of the match. The teams meet shoulder to shoulder for the Pershing Trophy, which were fired for the first time in this country at Camp Perry, Ohio, last year.

Team—Walter Reed S. C., Washington, D. C.....	62 pts.

## Miss Chadwick, Egyptians Conquer Channel

Florence Chadwick, a stenographer from San Diego, Calif., conquered the English Channel for the third time on Sept. 4, 1953. In swimming from England to France on a non-stop round-trip attempt, she was timed in 14 hours 42 minutes, bettering the recognized record of 15 hours 31 minutes set by Tom Blower of England in 1948. Miss Chadwick started at Dover, and finished near Wissant.

On Aug. 2, Miss Chadwick attempted the round trip but was pulled out of the water 9 hours 55 minutes after she had started. On the same day, an Egyptian relay team of Abd Litif Abou Heif, El Araby, Abou Bakr, A. Abdou, M. Hassaan and Bakr Sollman surpassed its own record for the channel crossing. The sextet was clocked in 10 hours 51 minutes, as compared with its previous mark of 11 hours 11 minutes.

Abou Heif, after swimming one of the early legs of about 4 miles, struck out alone from the English shore and reached France in 13 hours 35 minutes to beat Blower's record.

Miss Chadwick achieved another goal on Sept. 20, 1953. She swam across the Straits of Gibraltar, from Spain to North Africa, in 5 hours 6 minutes, excelling the record of 6 hours 58 minutes established by Jorge Sungden.

Miss Chadwick made two other noteworthy conquests before announcing her retirement from long-distance swimming. She crossed the Bosphorus from Europe to Asia and back, about 4 miles, in 1 hour 14 minutes 7 seconds on Oct. 7 and two days later she swam the Turkish Dardanelles (Hellespont), a round trip of between 6 and 7 miles in 14:58:08.

## Milwaukee, Baltimore in Majors

The major league baseball map was revised for the first time in fifty years in 1953 when the Braves' National League franchise was shifted from Boston to Mil-

waukee before the season started and the Browns' American League franchise was transferred from St. Louis to Baltimore at the close of the regular campaign.

Totals..... 7,416,716 6,339,148

\* Club record. Milwaukee franchise shifted from Boston before start of 1953 season. League record—10,388,470 in 1947.

## Birmingham, Stamford Take Titles

Birmingham, Ala., won the 1953 Little League Baseball championship and Stamford, Conn., captured its second straight Little-Bigger League crown. After the title tournament the Little-Bigger League changed its name to The Babe Ruth League. The Logan Wheeler Post No. 36 of Yakima, Wash., finished on top in the American Legion Junior competition.

## West Wins Negro Classic

In the 1953 annual Negro East-West baseball game at Comiskey Park, Chicago, the West squad triumphed, 5 to 1. The winning team was composed of members of the Kansas City Monarchs and the Memphis Red Sox. Players of the Indianapolis Clowns and Birmingham Black Barons made up the losing team.

## Yale Swimmers Extend Streak

Yale swimming teams, under Robert J. H. Kipthuth's coaching, have had four outstanding dual-meet winning streaks since 1918. In 1953 the squad captured 15 in a row to extend Kipthuth's latest string to 100. From 1924 to 1937 the Elis won 175 meets in succession for Kipthuth's best skein. His teams took 65 straight from 1918 to 1924 and 63 from 1938 to 1945.

#### Riding Mark to Shoemaker

When Jockey Willie Shoemaker rode his 391st winner on Oct. 16, 1953, in the third race at Golden Gate Fields, Albany, Calif.,

he set a world single-season record. His record-breaking mount was The Hoop. The previous mark was 390, established by Anthony DeSpirito in 1952.

We have endeavored to prepare the INDEX for easy use by professional researchers and the average Mr. and Mrs. Public. This goal presents many difficulties and we modestly hope we have succeeded. Where we have failed we would appreciate your help. If you cannot find anything quickly and you think it's our fault, kindly send suggestions and criticisms to:

THE INFORMATION PLEASE ALMANAC  
 444 Madison Avenue  
 New York 22, N. Y.

**Alabama—(cont.)**
